Under the present proposal, Applicant will construct and operate approximately 4.8 miles of 8-inch and 0.6 mile of 6-inch lateral extending from the new delivery point to Fort Custer. The cost of these facilities is estimated to be $195,600, which will be financed from current operating revenues.

Respondent will construct and operate a meter and regulator station at an estimated construction cost of $29,500. Respondent sells gas to Applicant under Rate Schedule G–1 which provides for a contract demand rate of $2.19 per Mcf and a commodity rate of 24.1¢ per Mcf. The project is economically feasible.

By its order of September 23, 1965, the Michigan Public Service Commission authorized Applicant to construct and operate the proposed lateral and to sell the gas to the Job Corps Training Center.

Respondent filed a letter with the Commission on September 15, 1965, which stated that it had no objection to the proposal.

Due notice of the filing of the application and opportunity for hearing thereon was published in the Federal Register on September 22, 1965 (30 F.R. 12082). No protest, petition to intervene or notice of intervention has been filed.

The Commission finds:

(1) Panhandle Eastern Pipe Line Company, a Delaware corporation having its principal place of business in Kansas City, Missouri, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of September 23, 1942, in Docket Nos. G–200 and G–207 (3 FPC 273).

(2) Applicant is a public utility company in the State of Michigan and is authorized to construct and operate facilities to distribute and sell natural gas to inhabitants of the communities along its system.

(3) It is necessary and desirable in the public interest that Respondent be directed to establish a physical connection of its transportation facilities with the facilities proposed to be constructed by Applicant and to sell and deliver up to an additional 1,500 Mcf of natural gas per day to Applicant, as hereinbefore described and as more fully set forth in the application, as hereinafter ordered and conditioned.

(4) The requirement that Respondent serve Applicant, as requested, will not place an undue burden upon Respondent nor impair its ability to render adequate service to existing customers.

The Commission orders:

(A) Respondent is directed to establish a physical connection of its natural gas transmission system with the facilities to be constructed by Applicant and

to sell and deliver up to an additional 1,500 Mcf of natural gas per day to Applicant, all as hereinbefore described and as more fully described in the application.

(B) Applicant shall be prepared to receive natural gas from Respondent at the proposed new connection within one year from the date of this order.

(C) Respondent shall notify the Commission of the commencement of service within 10 days thereof.

(D) Respondent shall execute and file with the Commission a service agreement with Applicant in accordance with the Commission's Regulations.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

IDAHO POWER COMPANY, PROJECT NO. 1975

ORDER APPROVING SUPPLEMENTAL PROJECT EXHIBIT M

(Issued October 8, 1965)

On September 20, 1965, Idaho Power Company, licensee for Bliss Project No. 1975, filed for Commission approval Supplemental Exhibit M showing an additional conductor to be bundled to the 81.1 mile long Midpoint-Brady section of the Boise Bench-Brady No. 1 line. The Bliss project is located on the Snake River in Elmore, Twin Falls and Gooding Counties, Idaho, and affects lands of the United States in Elmore and Twin Falls Counties.

The licensee advises that the additional conductor is needed to increase the capacity of the licensee's 230 kv transmission system between Midpoint and Brady Substation to transmit power from the western portion of the licensee's system to the eastern portion. The alteration of the No. 1 Midpoint-Brady section of line will be accomplished by installing one conductor for each of the phases one foot above the existing conductor which will be lowered by one foot. The additional line will be on an existing transmission line right-of-way, and, consequently, no additional lands of the United States will be involved.

The licensee further advises that there would be no cancellation or reduction of service during the low load shut down construction period of October–December, 1965, which occurs between the irrigation load season and the winter peak load, since during this period the licensee's No. 2 Midpoint-Brady section of line alone can carry the total load requirements.

Our records show that the licensee's load on the eastern end of the system was 257 mw in 1964 and the system load growth is estimated by the licensee to be about 6 percent per year. The proposed transmission capacity to be provided by the additional conductor would carry power equal to normal load growth for 5 to 6 years in the licensee's service area involved. In the circumstances, the increased transmission capacity, estimated by the licensee to cost approximately $750,000, appears to be an economically reasonable means of providing about 100 mw of transmission capacity to the eastern end of the licensee's system to assure transmission capacity at peak load times.

The Commission finds:

The following-described exhibit conforms to the Commission's rules and regulations and should be approved as part of the license for the project:

Exhibit M in one typewritten sheet dated September 16, 1965, entitled "Midpoint-Brady 230 KV Transmission Line-General Description & Specifications of Equipment to be Added", filed in the Commission on September 20, 1965.

The Commission orders:

The Exhibit M described in the above finding is hereby approved as part of the license for Project No. 1975.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

PHILLIPS PETROLEUM COMPANY, G–16611, G–16612; KERR-MCGEE OIL INDUSTRIES, INC., G–16718, G–16719; THE JUPITER CORPORATION, G–16679

ORDER DENYING REHEARING

(Issued October 8, 1965)

Applications for Rehearing of our Opinion No. 470, issued August 11, 1965, 34 FPC 486, in the above proceeding, were filed on September 10, 1965, by The Jupiter Corporation and the Public Service Commission of the State of New York. In Opinion No. 470 we determined that a retroactive jurisdictional finding should not be made with regard to sales by Phillips Petroleum Company and Kerr-McGee Oil Industries, Inc. from the Hog Bayou and Rollover fields in South Louisiana and that an in-line price should be applied to these sales. We also found that a determination of the status of The Jupiter Corporation's activities in connection with the Rollover field sales should be deferred until the record in the proceeding in RI63–212 is before us.

In its application the New York Commission continues to urge a retroactive jurisdictional finding and also contends, as does Jupiter, that in any event the producers are selling directly to Tennessee Gas Transmission Corporation and thus anything paid to Jupiter should be included in the in-line price. Our position on a retroactive jurisdictional finding was made clear in Opinion No. 470. All of the other arguments made relate to the status of Jupiter and the contractual relationships involved in Docket No. RI63–212. These contentions must await a determination in that proceeding.

The Commission finds:

The applications for rehearing filed herein by Jupiter and the New York Commission present no facts or legal principles which would warrant any change or modification of the Commission's Opinion No. 470 issued August 11, 1965 in this proceeding.

The Commission orders:

The applications for rehearing in the above proceedings filed on September 10, 1965, by The Jupiter Corporation and the Public Service Commission of the State of New York are hereby denied.

Commissioner Bagge *not participating.*

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

ALGONQUIN GAS TRANSMISSION COMPANY, DOCKET NO. CP64–6

ORDER AMENDING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued October 11, 1965)

On August 30, 1965, Algonquin Gas Transmission Company (Petitioner) filed in Docket No. CP64–6 a petition to amend the certificate of public convenience

and necessity issued in said docket by the Commission on December 19, 1963, 30 FPC 1559, which certificate has heretofore been amended by Commission orders issued on October 28, 1964, 32 FPC 1229, and March 29, 1965, 33 FPC 642, as more fully set forth in the petition to amend.

Petitioner is authorized to make additional Maximum Daily Quantity sales of firm gas to certain of its existing customers commencing on November 1, 1964, and November 1, 1965, as authorized in the orders mentioned above. By the instant filing, Petitioner seeks to alter the amounts of firm gas authorized for sale to three of its customers beginning November 1, 1965, under Petitioner's Rate Schedule F–1, as shown in the following table:

Customer	Volumes—Mcf at 14.73 p.s.i.a.		
	Presently authorized	Proposed change	Proposed maximum daily quantity
Newport Gas Light Company	3,940	(440)	3,500
Bristol and Warren Gas Company	1,500	150	1,650
North Attleboro Gas Company	560	40	600
Total	6,000	(250)	5,750

These customers have agreed to the proposed changes which were brought about as the result of the failure of gas loads to develop as anticipated, in the case of The Newport Gas Light Company, and the recent acquisition of previously unanticipated gas loads, in the cases of Bristol and Warren Gas Company and North Attleboro Gas Company. No new facilities will be required.

The net reduction in volumes of 250 Mcf per day will have no appreciable effect upon Petitioner's system capacity or economic feasibility. The decrease in estimated annual sales for the period will be approximately 67,500 Mcf out of a total annual volume of more than 97,000,000 Mcf.

Due notice of the filing of the petition was published in the Federal Register on September 11, 1965 (30 F.R. 11700). No protest, petition to intervene, or notice of intervention has been filed in this proceeding.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the certificate of public convenience and necessity issued in Docket No. CP64–6 on December 19, 1963, be further amended as hereinafter ordered.

The Commission orders:

(A) The certificate of public convenience and necessity issued to Algonquin Gas Transmission Company in Docket No. CP64–6 on December 19, 1963, and amended by orders issued on October 28, 1964, and March 29, 1965, is further amended by authorizing a net reduction of 250 Mcf of natural gas per day in firm deliveries to three customers served under Rate Schedule F–1, as hereinbefore described and as more fully described in the petition to amend.

(B) In all other respects said certificate, as amended, shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

EAST TENNESSEE NATURAL GAS COMPANY AND TEXAS EASTERN TRANSMISSION CORPORATION, DOCKET NO. CP66-47

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued October 11, 1965)

On August 11, 1965, East Tennessee Natural Gas Company (East Tennessee), and Texas Eastern Transmission Corporation (Texas Eastern), jointly referred to as Applicants filed in Docket No. CP66-47 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of interconnecting facilities and emergency deliveries of natural gas, all as more fully set forth in the application.

The proposed interconnections will be located (1) where Texas Eastern's 30-inch line crosses East Tennessee's 12-inch South Line in Giles County, Tennessee, and (2) at a point where Texas Eastern's 30-inch line crosses East Tennessee's 22-inch North Line in Trousdale County, Tennessee.

The estimated total cost of the proposed facilities is $36,900 of which East Tennessee's share is $20,900, and Texas Eastern's share is $16,000 and which will be defrayed by the respective companies from funds on hand.

Texas Eastern and East Tennessee have entered into a letter agreement dated August 9, 1965, which provides for the utilization of the proposed interconnections in the event either company is confronted with an emergency which can be alleviated by the deliveries of natural gas from the other, without impairing their respective service obligations.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on October 7, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits submitted in support of the authorization sought and upon consideration of the record,

The Commission finds:

(1) Applicant, East Tennessee Natural Gas Company, a Tennessee corporation having its principal place of business in Knoxville, Tennessee, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of January 30, 1948, in Docket No. G-889 (7 FPC 5).

(2) Applicant, Texas Eastern Transmission Corporation, a Delaware corporation having its principal place of business in Shreveport, Louisiana, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of March 30, 1949, in Docket No. G-1089 (8 FPC 228).

(3) The proposed emergency exchange of natural gas between the Applicants, and the construction and operation of the proposed facilities for the transportation of natural gas in interstate commerce, as hereinbefore described and as more fully described in the joint application and exhibits in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(4) The aforesaid proposed exchange and delivery of natural gas on an emergency basis, and the construction and operation of facilities are required by the

public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Applicants are able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(6) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that East Tennessee and Texas Eastern shall file their letter of agreement dated August 9, 1965, covering the proposed emergency interconnection and service as a special rate schedule to their respective FPC Gas Tariffs within 30 days after the date of issuance of this order.

(7) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicants' compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to the Applicants in this proceeding, jointly, authorizing the emergency exchange and delivery of natural gas as hereinbefore described, and the construction and operation of facilities for the transportation of natural gas in interstate commerce, as hereinbefore described and as more fully described in the joint application and exhibits in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicants' compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities authorized shall be completed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the aforesaid Regulations within 3 months of the date on which this order issues.

(D) East Tennessee and Texas Eastern shall file within 30 days after the issuance of this order their letter of agreement dated August 9, 1965, as a special rate schedule to their respective FPC Gas Tariffs.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

HUMBLE GAS TRANSMISSION COMPANY, DOCKET NO. CP65-395

ORDER GRANTING RECONSIDERATION AND ISSUING TEMPORARY CERTIFICATE

(Issued October 11, 1965)

On June 9, 1965, Humble Gas Transmission Company (Humble) of New Orleans, Louisiana, filed an application pursuant to Section 7 of the Natural Gas Act, for a certificate of public convenience and necessity, as amended on July 6, 1965, for authorization to construct a measuring station and one four-inch pipeline approximately 4,100 feet in length, to maintain and operate approximately 2,350 feet thereof, and to transport, sell, and deliver natural gas to Diamond National Corporation (Diamond), as hereinafter described. The proposed lateral line will extend from a point of connection with Humble's

existing facilities near Natchez in Adams County, Mississippi, to Diamond's plant.

Humble agreed that upon completion of the construction of such facilities it would assign title to Diamond, free of cost, of that portion of the connecting line extending from the discharge side of its measuring station to the terminal end of the line at the plant. The proposed facilities are estimated to cost $21,000. The line section of approximately 1,750 feet in length that Humble intends to assign to Diamond represents approximately $8,400 of the estimated total cost of the proposed facilities.

Humble seeks authority to construct the aforementioned facilities in order to make a direct sale of natural gas to Diamond. Diamond will use this gas in boilers to produce steam for processing, for direct-fired driers, and miscellaneous plant uses in a facility that it is presently constructing near Natchez, Mississippi. Humble in its application, requests permission to transport for sale 500,000 Mcf of gas to Diamond on an annual basis and a maximum of 3,000 Mcf on a daily basis.

On July 12, 1965, Mississippi Valley Gas Company (Mississippi) filed a petition to intervene in opposition to Humble's application. In its petition to intervene, Mississippi alleges that it is a local gas distribution company serving over one hundred communities in Mississippi and that the Diamond plant will be located within the geographical confines which have been designated as its service area by the Mississippi Public Service Commission. Mississippi purchases gas to serve its customers in this area under a service agreement dated September 11, 1963, with Humble. Humble's effective gas tariff on file with the Commission contains a provision that could preclude Mississippi from attaching industrial loads of any significant size in this area.[1]

On August 18, 1965, Humble filed an application for a temporary certificate under the provisions of Section 157.17 of the Regulations to construct the aforementioned facilities in order to commence sales of natural gas to Diamond. Humble urged that a temporary certificate was necessary because unless gas was forthcoming to commence the operation of the plant between September 15, 1965 and October 1, 1965, Diamond would suffer irreparable loss in the market, as well as serious loss on its $12,000,000 plant investment. It further pointed out that the City of Natchez would also suffer economically because of the loss of Diamond's payroll and certain operational expenditures it anticipates making in the immediate area.

The Commission as a result of the aforementioned filings issued an order on September 17, 1965, 34 FPC 873, directing Humble to show cause in a formal hearing why it should not be found that the above-mentioned provision in Humble's tariff is unjust and unreasonable. The Commission in that order, mindful of the consequences that would result in the event that timely gas service was not afforded to Diamond, scheduled a prehearing conference for October 11, 1965, in order to seek means to afford service on some interim basis pending the final determination of this proceeding. The Commission therefore, by letter-order dated September 17, 1965, denied Humble's application for a temporary certificate in hope that the parties could arrive at some mutually satisfactory arrangement for interim service.

On September 30, 1965, the Staff of the Commission met with representatives of Humble, Mississippi, and Diamond in an attempt to arrive at some acceptable

[1] Paragraph 10 of the General Terms and Conditions of Humble's FPC Gas Tariff, Original Volume No. 1, provides as follows:

Buyer shall not sell gas purchased under Seller's Rate Schedule G–1 to any one industrial consumer in excess of 100,000 cubic feet per month except by written consent of Seller.

solution of the problem of interim service to Diamond. The parties were not able at this time to agree to a satisfactory solution to the interim service problem to Diamond. The Commission will therefore cancel the prehearing conference it had scheduled for October 11, 1965, with respect to this matter in light of the fact that the September 30, 1965 conference was directed to the precise problem for which the October 11 meeting was called and clearly indicated that the parties will not be able to voluntarily arrive at a mutually satisfactory solution.

On October 1, 1965, Humble filed a motion for reconsideration of the Commission's denial of the temporary certificate. Humble set forth that the settlement attempts, on an interim basis, have been fruitless, and that there remained a dire economic need to Diamond of assurance of a gas supply since the plant was virtually ready to begin operation.[2]

The Commission is of the opinion that as a result of these developments Humble's motion for reconsideration of the Commission's letter-order of September 17, 1965, denying its application for a temporary certificate in the instant proceedings, should be granted and that Humble should be granted the temporary certificate requested by its application filed on August 16, 1965. The Commission in granting this temporary certificate is mindful that the cost of the facilities to be installed by Humble is extremely small compared to the consequential loss that would be suffered by Diamond in the event they were forced to await a final determination of this proceeding in order to obtain natural gas service. However, the Commission also wants to make it abundantly clear herein that the installation of these facilities is not in any manner to prejudice the final outcome of the instant proceeding.

The Commission finds:

(1) No purpose will be served in holding the prehearing conference that it previously had scheduled for October 11, 1965, in its order to show cause issued on September 17, 1965, in the above-styled proceeding.

(2) An emergency as contemplated by Section 157.17 of the Regulations under the Natural Gas Act has been shown to exist warranting the issuance of a temporary certificate to Humble Gas Transmission Company to construct those facilities set forth above.

(3) The public convenience and necessity requires that Humble Gas Transmission Company's motion for reconsideration be granted.

The Commission orders:

(A) The prehearing conference scheduled to be held in the proceeding entitled *Humble Gas Transmission Company*, Docket No. CP65-395, on October 11, 1965, in the order to show cause issued by the Commission in the above-styled proceeding is cancelled.

(B) Humble Gas Transmission Company is granted the reconsideration it has requested in connection with the action taken by the Commission in its letter-order of September 17, 1965.

(C) Humble Gas Transmission Company is issued a temporary certificate of public convenience and necessity authorizing it to do and perform all of the matters requested to be authorized in its original application dated June 7, 1965, as supplemented on July 6, 1965, subject to the following conditions: (1) The cost of the facilities permitted under this temporary certificate is not to be included in the rate base of the Humble Gas Transmission Company, and (2) the granting of this temporary certificate is not to prejudice the outcome of the above-styled proceeding in any way.

Commissioner Black *not participating.*

[2] On October 8, 1965, Mississippi filed an answer in opposition to Humble's motion.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

THE MANUFACTURERS LIGHT AND HEAT COMPANY AND TEXAS EASTERN TRANSMISSION CORPORATION, DOCKET NO. CP66-42

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued October 11, 1965)

On August 6, 1965, The Manufacturers Light and Heat Company (Manufacturers) and Texas Eastern Transmission Corporation (Texas Eastern) filed in Docket No. CP66-42 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the exchange and delivery of natural gas and the construction and operation of exchange facilities, all as more fully set forth in the application.

Manufacturers desires to test oil and gas leases owned by it by drilling a natural gas test well at a location on one of the leases in Monroe Township, Bedford County, Pennsylvania. Texas Eastern's facilities are approximately 13 miles closer to the test area than are the facilities of Manufacturers.

Manufacturers proposes to construct and operate approximately 1.7 miles of 6-inch diameter pipeline from a point of connection with a well line from the proposed exploratory well to a point of connection with one of Texas Eastern's parallel 20-inch and 24-inch diameter transmission pipelines, to be known as the Emerson Connection, to be located in Monroe Township. The facilities would be used by Manufacturers to transport gas from the first producing well and such other local natural gas as may be developed and become available from other wells which may be drilled in the area, whether by Manufacturers or by independent producers.

Pursuant to an exchange agreement entered into between the parties on July 23, 1965, Texas Eastern would simultaneously return substantially equal quantities of natural gas to Manufacturers at presently existing points of delivery provided in the service agreement between the parties dated October 20, 1964. The maximum daily quantities of gas to be exchanged under the proposal would not exceed 20,000 Mcf unless otherwise agreed by the parties.

Texas Eastern will make the necessary tap to its facilities and install and operate at the Emerson Connection the necessary valves, fittings and meter furnished by Manufacturers. Manufacturers will reimburse Texas Eastern for all labor costs in making such connection while Texas Eastern will operate such valves and fittings.

The total cost of construction of all the facilities is estimated to be $79,000, which will be borne by Manufacturers from funds on hand. Total yearly operating expenses are estimated at $4,000. The project appears to be economically feasible.

Due notice of the filing of the application was published in the Federal Register on August 18, 1965 (30 F.R. 10258). No petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on October 7, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, The Manufacturers Light and Heat Company, a Pennsylvania corporation having its principal place of business in Pittsburgh, Pennsylvania, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of December 29, 1944, in Docket No. G–593, *et al.* (4 FPC 821).

(2) Applicant, Texas Eastern Transmission Corporation, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order issued March 30, 1949, in Docket No. G–1098 (8 FPC 228).

(3) The facilities hereinbefore described and as more fully described in the application in this proceeding are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof and the transportation of natural gas by Applicants are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(4) Applicants are able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(5) The construction and operation of the proposed facilities and the transportation of natural gas by Applicants are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(6) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicants' compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of said Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to The Manufacturers Light and Heat Company and Texas Eastern Transmission Corporation authorizing the construction and operation of the facilities and the exchange and delivery of up to 20,000 Mcf of natural gas per day as hereinbefore described and as more fully set forth in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicants' compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) Construction of the facilities authorized herein shall not commence until such time as The Manufacturers Light and Heat Company discovers commercial quantities of gas in the proposed exploratory well which it intends to drill in Monroe Township, Bedford County, Pennsylvania.

(D) The facilities authorized shall be completed and placed in actual operation and the exchange and delivery of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within one year from the date of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

MIDWESTERN GAS TRANSMISSION COMPANY, DOCKET NOS. RP61-19 AND RP62-7; NATURAL GAS PIPELINE COMPANY OF AMERICA, DOCKET NO. RP63-6

ORDER GRANTING INTERVENTION

(Issued October 11, 1965)

On August 31, 1965, the American Public Gas Association (Association), a nonprofit association of publicly owned gas distribution systems located in eighty-six communities in twenty-six (26) states, filed a petition to intervene in these proceedings for the purpose of filing pleadings and briefs and to participate in oral argument. The Association states that its members purchase natural gas from pipelines serving the twenty-six (26) states therein designated and that the resolution of the issue with respect to the proper method of determining the amount of depreciation to be reflected in calculating Midwestern's Federal income taxes "will directly affect the prices many of the Petitioner's members will pay for natural gas."

Answers and objections to the petition were filed on September 10, 1965, by Independent Natural Gas Association of America (INGAA) and on September 14, 1965, by Midwestern. Among the objections raised are: (1) The petition was not timely filed; (2) the substantive view expressed in the petition is already being advanced by the City of Chicago; and (3) the Association has failed to show that its members will be directly affected by a decision in these proceedings.

It would appear that the aforestated objections are not well taken in that the Association is in effect requesting limited intervention and such intervention, if granted, would in no way delay the progress of the proceedings. Further, it is not the substantive position advanced by a petitioner which should be the basis of granting or denying intervention, but rather whether the petitioner has an interest which may be adversely affected by a decision in the proceedings involved. *City of Pittsburgh* v. *F.P.C.*, 237 F. 2d 741; *National Coal Association* v. *F.P.C.*, 191 F. 2d 462; *Virginia Petroleum Jobbers* v. *F.P.C.*, 265 F. 2d 364; *Michigan Consolidated Gas Company* v. *F.P.C.*, 282 F. 2d 854. Accordingly, it is our view that the petition to intervene should be granted as hereinafter provided.

The Commission finds:

Good cause exists to accept the late filing of American Public Gas Association's petition to intervene and the participation of that intervener in these proceedings for the limited purpose set forth in its petition may be in the public interest.

The Commission orders:

The Association is hereby permitted to become an intervener in these proceedings herein provided, subject to the Rules and Regulations of the Commission; *Provided, however,* that its participation shall be limited to matters affecting its asserted rights and interests specially set forth in its petition for leave to intervene; and *Provided, further,* that the admission of the petitioner shall not be construed as recognition by the Commission that it might be aggrieved because of any order or orders of the Commission entered in these proceedings.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

MILWAUKEE GAS LIGHT COMPANY AND MICHIGAN WISCONSIN PIPE LINE COMPANY, DOCKET NO. CP66-56

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued October 11, 1965)

On August 20, 1965, Milwaukee Gas Light Company (Applicant) filed in Docket No. CP66-56 an application pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Michigan Wisconsin Pipe Line Company (Respondent) to establish physical connection of its transmission facilities with the proposed facilities of Applicant and to sell natural gas to Applicant for resale and distribution in the village of Rudolph, Wood County, Wisconsin, and environs, as more fully described in the application.

Applicant proposes that Respondent be required to construct a measuring station and a four-inch transmission main, the transmission main to be constructed from a point on Respondent's present facilities which are located approximately 0.3 mile west of Rudolph to the proposed measuring station, by application of Respondent's "10-cent formula." Also proposed is the construction by Applicant of a complete distribution system in the village of Rudolph.

The total estimated volumes of gas required to meet Applicant's annual and maximum day requirements for the first three years of proposed operation in the village of Rudolph are stated to be:

	First year	Second year	Third year
Annual (Mcf)	12,688	14,901	16,654
Peak day (Mcf)	57	81	92

The total estimated cost of Applicant's proposed distribution system is $45,611, which will be financed with cash on hand. The lateral and necessary meter station to be constructed by Respondent are estimated to cost $26,000. The proposal is economically feasible.

On June 21, 1965, the village of Rudolph granted Applicant a franchise to supply natural gas in said village, and on August 12, 1965, the Public Service Commission of Wisconsin granted Applicant a certificate authorizing the construction and operation of the necessary facilities and the service to the public in the village of Rudolph.

On September 13, 1965, Respondent filed an answer to the application stating that it has no objections to providing the proposed service and constructing the proposed facilities. Respondent states that in view of the *de minimis* nature of the volumes involved, it can provide the requested service from existing sources of gas supply without the construction of additional main line facilities.

Due notice of the filing of the application and opportunity for hearing thereon was published in the Federal Register on September 2, 1965 (30 F.R. 11293). No protest, petition to intervene or notice of intervention has been filed.

The Commission finds:

(1) Respondent, Michigan Wisconsin Pipe Line Company, a Delaware corporation having its principal place of business in Detroit, Michigan, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore

found by the Commission in its order of November 30, 1946, in Docket No. G-669 (5 FPC 953).

(2) Applicant is a public utility company in the State of Wisconsin and is authorized to construct and operate facilities to distribute and sell natural gas to inhabitants of the communities along its system.

(3) It is necessary and desirable in the public interest that Respondent be directed to establish physical connection of its transportation facilities with the facilities proposed by Applicant and to sell and deliver up to 92 Mcf of natural gas per day to Applicant, as hereinbefore described and as more fully set forth in the application, as hereinafter ordered and conditioned.

(4) The requirement that Respondent serve Applicant, as requested, will not place any undue burden upon Respondent nor impair its ability to render adequate service to existing customers.

The Commission orders:

(A) Respondent is directed to establish physical connection of its natural gas transmission system with the facilities to be constructed by Applicant and to sell and deliver up to 92 Mcf of natural gas per day to Applicant, all as hereinbefore described and as more fully described in the application.

(B) Applicant shall be prepared to receive natural gas from Respondent within one year from the date of this order.

(C) Respondent shall notify the Commission of the commencement of service within 10 days thereof.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

PANHANDLE EASTERN PIPE LINE COMPANY, DOCKET NO. CP66-7

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued October 11, 1965)

On July 12, 1965, Panhandle Eastern Pipe Line Company (Applicant), filed in Docket No. CP66-7 an application as supplemented on August 9, 1965, pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of two pipeline loop segments, all as more fully described in the application and supplement thereto.

Applicant proposes to construct and operate a 7.9-mile continuation of the 22-inch partial loop between Sneed, Texas, and Hansford, Texas, and an 18.5-mile 26-inch loop of a portion of the line between Hansford, Texas, and Liberal, Kansas. The facilities are needed in order to accommodate the volumes of gas which Applicant obtains from sources in the vicinity of the Panhandle field of Texas. The total volume to be transported through this lateral is being increased by 64,000 Mcf/d to 560,000 Mcf/d. The total volume of 1,119,000 Mcf/d flowing in the main transmission lines east of Liberal is the same volume authorized in Docket No. CP65-255, Applicant's last system expansion.

The estimated cost of the facilities is $1,933,000, which will be financed from funds on hand.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on October 7, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including

the application, as supplemented, and exhibits submitted in support of the authorization sought, and upon consideration of the record,

The Commission finds:

(1) Applicant, Panhandle Eastern Pipe Line Company, a Delaware corporation having its principal place of business in Kansas City, Missouri, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of October 17, 1945, in Docket No. G–254 (4 FPC 1081).

(2) The proposed construction and operation of facilities and transportation of natural gas by Applicant as hereinbefore described, and as more fully described in the application and exhibits in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid construction and operation of facilities and transportation of natural gas are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(2), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to the Applicant in this proceeding authorizing the construction and operation of facilities and the transportation of natural gas, as hereinbefore described and as more fully described in the application, as supplemented, and exhibits in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(2), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities authorized shall be completed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the aforesaid Regulations within 12 months of the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

AREA RATE PROCEEDING (PERMIAN BASIN), DOCKET NO. AR61–1, ET AL.

ORDER DENYING MOTIONS FOR RECONSIDERATION OF ORDER TO SHOW CAUSE

(Issued October 12, 1965)

On August 5, 1965, 34 FPC 424, in the above-designated proceeding we ordered that certain respondents show cause why the rates prescribed by Opinion No. 468 and the accompanying order should not be applicable to certificate applications and rates for sales of gas made in the Permian Basin which were not covered

by such Opinion. Various parties to the proceeding have filed applications for rehearing of this order.[1] On October 4, 1965, we issued Opinion No. 468–A, *supra*, p. 1068, which denied rehearing of Opinion No. 468, 34 FPC 159, but makes certain modifications and clarifications.

In view of the modifications to Opinion No. 468 we shall extend the time for filings required by Ordering Paragraphs (A), (B), and (C) of the show cause order until December 6, 1965.

Except for the corrections set forth in the separate errata notice issued concurrently herewith, the motions for reconsideration set forth no new facts or principles of law which were not fully considered prior to the issuance of the subject Order to Show Cause or which, now being considered, warrant any change or modification of said order. In view of the modifications to Opinion No. 468, references to Opinion No. 468 in the show cause order should be read as meaning Opinion No. 468 as modified and clarified by Opinion No. 468–A and accompanying order.

The Commission orders:

(A) The motions for reconsideration filed herein are hereby denied.

(B) The time for complying with filing requirements set forth in Ordering Paragraphs (A), (B), and (C) of the August 5, 1965, Order to Show Cause are hereby extended until December 6, 1965.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

HUNT OIL COMPANY, DOCKET NO. CI65–1241

ORDER DENYING APPLICATION FOR REHEARING AND RECONSIDERATION AND GRANTING EXTENSION OF TIME TO ACCEPT TEMPORARY CERTIFICATE

(Issued October 14, 1965)

On September 17, 1965, Hunt Oil Company (Hunt) filed an application for rehearing and reconsideration of the Commission's letter-order issued August 20, 1965, which granted to Hunt a temporary certificate of public convenience and necessity authorizing a proposed sale of natural gas to Panhandle Eastern Pipe Line Company (Panhandle) from Woodward and Dewey Counties, Oklahoma. The temporary certificate was issued pursuant to Hunt's request filed on May 27, 1965, to commence immediate service. It authorized the above-described sale subject, *inter alia*, to the following conditions:

(1) The initial price for gas sales attributable to:

(a) acreage in Woodward County shall be 17.0¢ per Mcf at 14.65 psia, subject to Btu adjustment as provided in the rate schedule.

(b) acreage in Dewey County shall not exceed 15.0¢ per Mcf at 14.65 psia, subject to Btu adjustment as provided in the rate schedule.

(2) The above-specified rates shall remain in effect until changed by Commission order in this proceeding, Docket No. CI65–1241.

(3) In the event that the Commission amends its General Policy Statement No. 61–1, by adjusting the boundary between the Panhandle area and the "Other" Oklahoma area so as to increase the initial wellhead price for new gas in the area of the sales in Dewey County involved herein, Hunt Oil Company may thereupon

[1] The order in question is interlocutory, relates only to procedural matters and therefore is not subject to an application for rehearing. The pleadings are therefore treated as motions for reconsideration.

substitute the new rate reflecting the amount of such increase, and thereafter collect such new rate prospectively in lieu of the initial rate herein required.

As Hunt correctly states, the differential in pricing reflected in the certificate conditions set out above arises from the Commission's General Policy Statement No. 61–1, which includes Woodward County, Oklahoma, in the Oklahoma "Panhandle" pricing area, a 17 cent area, and Dewey County, Oklahoma, in the Oklahoma "Other" area, a 15 cent area.

In its application for reconsideration Hunt points out that it will produce the gas involved herein from a well located in Woodward County. However, since the well is located on a 640 acre unit which spreads across Woodward and Dewey Counties, working interest owners holding leases in Dewey County will receive only 15 cents for their proportionate share of the gas by virtue of the terms of the temporary certificate. Hunt argues that the only justification for this result is the Commission's insistence upon adhering to its guideline boundaries established in its policy statement.

Hunt further set forth the Commission's announcement in its original policy statement to the effect that:

> The geological areas which we have used are convenient and well known. They are not necessarily in complete accord with geographical and economic factors which may be relevant to the establishment of pricing areas. As experience and changing factors may indicate, we will change or alter these areas from time to time in order to eliminate such inequities as may appear to exist because of our use of geographical boundaries. 24 FPC 818, 819.

On June 11, 1962, in Docket No. R–128 the Commission announced its proposal to change the boundaries of its natural gas pricing areas. It indicated that some of the original boundaries would not be changed, but that other areas have been divided or consolidated to form new areas. The Commission specifically set forth a proposal that the Oklahoma Panhandle and Carter-Knox areas be combined with Northwestern Oklahoma Counties into the Anadarko Basin Area. This proposed revision was predicated on accumulated experience which suggested the need for some revisions in the boundaries. The Commission invited interested parties to submit their views and comments. *Inter alia*, the existing boundary between the Oklahoma Panhandle and the Oklahoma Anadarko areas (both in the Anadarko Basin Area) was proposed to be eliminated (see Docket No. R–218, Proposed Revision, General Policy Statement 61–1 Pricing Areas). The revisions proposed in Docket No. R–218 have not been finally determined by the Commission.

On November 27, 1963, 30 FPC 1354, the Commission issued an order instituting an area rate proceeding (AR64–1); and, for the purpose of determining area rates, established the Hugoton-Anadarko Area. The Commission's order recognized four separate sub-areas within the Hugoton-Anadarko area. Furthermore, the Commission indicated that its investigation will "also consider whether such area rates should be uniform throughout separate production areas which are being consolidated for joint hearing or should vary from different production areas or for any other geological area encompassed within the proceeding" (30 FPC at p. 1357). In a related order the Commission expressly deferred further consideration of R–218. (30 FPC 1374).

It is clear that final disposition of the issues in AR64–1 will resolve the problem of the appropriate price to be charged for gas to be sold from the Hugoton-Anadarko area upon a complete evidentiary record. That price of course is now controlled by the delineation of areas in Policy Statement No. 61–1 and, as we pointed out in Opinion No. 446 (32 FPC 1306), "the appropriate procedure for effecting changes in area prices is not through piecemeal determinations in individual certificate proceedings, but rather in a rule-making or

rate proceeding in which all relevant factors may be evaluated." In short, the just and reasonable rates for the proposed sale herein will be established in the area rate hearing already underway. Pending such determination, we must adhere to the ceiling prices and area definitions set forth in our General Policy Statement No. 61–1.

Finally, Hunt complains that by the terms of the temporary certificate the specified rates (the initial price) to be charged shall remain in effect until changed by Commission order in this proceeding.[1]

We believe this provision is necessary pending ultimate determination of the price required by public convenience and necessity, in order to discharge our duty in the language of the Supreme Court that we "so condition the certificate that the consuming public may be protected while the justness and reasonableness of the price fixed by the parties is being determined under other sections of the Act." See *Atlantic Refining Company* v. *P.S.C. of New York*, 360 U.S. 378, 392.

The Commission orders:

(A) The application of Hunt Oil Company for reconsideration of the Commission's letter-order issued August 20, 1965, is denied.

(B) The request for extension of time to accept the temporary certificate to a date within 15 days after the issuance of the order herein is granted.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

PHILLIPS PETROLEUM COMPANY, DOCKET NOS. G–11217, G–14115, G–18417, G–18418, G–13734, G–15314, G–15315, G–18206, G–18207 AND G–18215

ORDER ON REMAND

(Issued October 14, 1965)

Phillips Petroleum Company (Phillips), on September 27, 1965, filed a motion requesting the Commission to enter an order directing El Paso Natural Gas Company (El Paso) to pay Phillips the sum of $26,248.67, together with simple interest thereon at 6 percent from April 8, 1964 (the date such sum was received by El Paso) until the date of payment. Phillips' request is based on the Court's decision in *Phillips Petroleum Company* v. *F.P.C.* (CA10, No. 7845) issued July 22, 1965, 349 F. 2d 535 setting aside the Commission's orders issued April 3, 1964, and June 10, 1964, 31 FPC 774, 1524, in the above-entitled proceedings insofar as they provide for the payment of interest on refunds made by Phillips subsequent to February 29, 1964, the date Phillips' tendered refunds herein with interest to El Paso. According to Phillips the principal amount of $26,248.67 represents the excess interest which Phillips was erroneously required to pay El Paso. In light of the court's decision, it is appropriate to grant Phillips' motion.

The Commission orders:

Within 30 days of the date of issuance of this order, El Paso shall refund to Phillips the amount of excess interest which Phillips was required to pay El Paso pursuant to the Commission's orders of April 3, 1964, and June 10, 1964, herein,

[1] As noted above, the temporary certificate specifically stated that if the Commission shall adjust its boundaries so as to increase the initial wellhead price for new gas in the area of the sales in Dewey County herein Hunt may substitute the new rate and collect such new rate prospectively.

with interest thereon at 6 percent from the date of payment by Phillips to the date El Paso makes refunds pursuant to this order. Within 10 days thereafter, El Paso shall file a copy of a release from Phillips with respect to such refunds.

OPINION NO. 479

NORTHERN NATURAL GAS COMPANY, DOCKET NOS. G–17485 AND G–17486; TOWN OF MANILLA, IOWA, DOCKET NO. RP64–46

OPINION AND ORDER MODIFYING AND ADOPTING INITIAL DECISION OF PRESIDING EXAMINER AMENDING CERTIFICATES

(Issued October 14, 1965)*

Syllabus

1. Northern's certificate should be amended to grant reduction in third-year contract demand since municipalities have no immediate need therefor, have suffered economic hardships from associated costs and there is no likelihood of material harm to pipeline's customers. P. 1140.
2. Fears that reduced contract demands will result in a revenue deficiency to Northern to be shouldered by Interveners is groundless—increased revenues from additional sales utilizing the released mainline capacity could reduce or totally eliminate claimed revenue deficiency. P. 1140.
3. North Central has not shown it is entitled to requested relief; unlike municipalities, it is suffering no economic hardship and seeks opportunity of increasing utilization of its propane air plant through reduction of contract demand. P. 1141.
4. North Central granted permission to defer use of its third-year contract demand until 1965–1966 heating season. P. 1141.
5. Reductions in contract demands can be made only with Commission approval on appropriate filings. P. 1141.
6. In a proceeding under Section 7 of the Natural Gas Act, Commission *issues* certificates of public convenience and necessity.

Justin R. Wolf, Charles A. Case, Jr., F. Vinson Roach, Jack C. Osborne, Daniel B. O'Brien and *Peter M. Andersen* for Northern Natural Gas Company

Robert F. Culver for Emmetsburg Municipal Gasworks and Town of Graettinger, Iowa

John F. Gaston for Iowa Electric Light & Power Company

Robert S. Hunt for Northwestern Public Service Company

Lloyd J. Marti for Western Power & Gas Company

George C. Mastor for Minneapolis Gas Company

George C. Pardee for Metropolitan Utilities District of Omaha

Mark W. Putney for Iowa Power & Light Company

A. R. Renquist for Northern States Power Company (Minnesota)

Justin A. Stanley, Robert A. Helman and *John L. McCausland* for Northern Illinois Gas Company

Charles F. Wheatley, Jr. for Manilla, Woodbine & Cascade, Iowa

Ned Willis for North Central Public Service Company

Richard C. Steffey for the Staff of the Federal Power Commission

---

*Initial decision appears on p. 1143. Rehearing denied by order issued December 8, 1965, 34 FPC 1417.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

BLACK, *Commissioner:*

This is a proceeding on requests by five Iowa towns operating municipal gas systems, namely, Emmetsburg, Graettinger, Manilla, Cascade, and Woodbine, and one private distributor, North Central Public Service Company (North Central) for Commission authorization permitting Northern Natural Gas Company (Northern) to reduce the third-year contract demand volumes prescribed for these customers by the order accompanying Opinion No. 324, issued on July 31, 1959, in *Northern Natural Gas Company*, 22 FPC 164.

By his initial decision issued July 1, 1965, following a four-day hearing, Presiding Examiner Harry W. Frazee would grant the requests of the five towns but would deny the request of North Central. The case is now before us on exceptions in opposition to the examiner's grant of relief, filed by two intervening customers of Northern, the Metropolitan Utilities District of Omaha and Minneapolis Gas Company (Interveners); and by North Central, urging reversal of the examiner's denial of its requested contract demand reduction. Northern's reply brief contends that there are extenuating circumstances which would justify approving all of the requested reductions as being in the public interest.

We conclude that the examiner correctly held that the certificate approving the five towns' contract demands should be amended to grant the reductions they request. As set forth in his decision, Cascade's 702 Mcf per day authorized third-year contract demand should be reduced by 93 Mcf to 609 Mcf; Emmetsburg's 1,415 Mcf reduced by 281 Mcf to 1,134 Mcf; Graettinger's 552 Mcf by 152 Mcf to 400 Mcf; Manilla's 477 Mcf by 86 Mcf to 391 Mcf; and Woodbine's 551 Mcf by 148 Mcf to 403 Mcf. We also conclude that the examiner correctly denied the reduction requested by North Central.

As to the five towns, the record shows that they do not presently need the contract demands they would release, that they have suffered definite economic hardship from the costs associated with their unneeded contract demands, and that there is no likelihood of any material harm resulting to Northern or its other customers from permitting the reductions requested. Also, here, as in our decision in *Transcontinental Gas Pipe Line Corporation*, 30 FPC 1044 (1963), granting the relief requested will permit the company to divert presently held but unused capacity to meet the needs of other customers. In the light of these facts, which are fully supported by detailed findings in the examiner's decision and by the record, the amendment of Opinion No. 324 and accompanying order to provide the relief requested by the five towns is clearly appropriate to carry out the provisions of the Act and is required by the public convenience and necessity.

The objections to granting such relief advanced by Interveners in their exceptions, are sufficiently answered by the examiner's decision. Primarily, Interveners fear that reducing the five towns' contract demands will result in a revenue deficiency to Northern that Interveners would have to shoulder. Such fears are groundless and do not justify withholding the relief the five towns request. The Interveners allege that the maximum estimated third-year revenue deficiency that might result from granting relief to the five towns is $54,592; the five towns place the figure at around $20,000. Either amount is minuscule in relation to Northern's gas utility operating revenues of over $225 million or the $168 million it realizes for its gas sold for resale. Further, increased revenues from additional sales by Northern utilizing released mainline capacity could reduce or totally eliminate the revenue deficiency claimed by Interveners.

As to North Central, it requests a reduction in its authorized third year contract demand by 1,482 Mcf, from 10,387 Mcf to 8,959 Mcf a day. We are of the opinion that North Central has not shown by substantial evidence that it is entitled to the requested relief. Unlike the five towns it is suffering no economic hardship. Rather it seeks through the reduction of its third year contract demands the opportunity of increasing the utilization of its propane air plant. There is no evidence here offered demonstrating that the contract demand requirements initially requested by North Central were the result of any policy of Northern to require or encourage customers to obtain inflated contract demand requirements. The sole basis for the relief requested is the availability of more economical alternative supplies. We find no basis justifying the requested relief.

Alternatively, North Central requests that, in the event we deny the reduction it seeks, we grant it permission to defer use of its third-year contract demand until the 1965–1966 heating season, which is, of course, now upon us. There appears to be no opposition to this request except that mentioned by Staff. Granting this request would evidently assist North Central to effect savings in its operations without any injury to Northern or its customers, and on the facts presented, appears to be in the public interest. Accordingly, we shall grant this request.

A question is raised concerning what is the proper basis for the relief the parties request. They contend that they are entitled to these reductions under the terms of Section 17.5 of the General Terms and Conditions of Northern's FPC gas tariff.[1] They argue that Northern has heretofore granted numerous contract reductions below the third-year contract demands certificated in Opinion No. 324. Thus, they conclude, it would be discriminatory and inequitable to deny their requested reductions. Northern concedes it has reduced the contract demands for some of the other customers but now disputes that its tariff permits automatic reductions of a party's contract demands without Commission approval. We agree with Staff and the examiner that the Commission's holding in the *Transco* case[2] is controlling on this point. Reductions in a party's contract demands can be made only with approval of the Commission on appropriate filings. In the light of this holding, we need not here concern ourselves with Northern's past interpretation of the effect of its tariff provisions.

The Interveners contend that the relief proposed by the examiner to the municipal systems retroactively applies a different test of economic feasibility to them than we applied to all other communities certificated in Opinion No. 324 and unlawfully discriminates against Interveners and Northern's other customers. They contend that these municipalities were certificated in Opinion No. 324 on condition that they either purchase certain minimum volumes or make a contribution in aid of construction. In support of their position, Interveners sought to address interrogatories to Northern to ascertain the various modifications to the third year contract demand requirements of the customers certificated in Opinion No. 324. Through these interrogatories, Interveners also sought to obtain from Northern the contributions in aid of construction

[1] (17.5) *Gas Utilities' Right to Decrease the Contract Demand:* The Gas Utility shall have the right to decrease the Contract Demand for any community effective with the billing month of November of any year, under any of the following conditions:

(a) When and to the extent that the capacity so released can be made available to and is offset by increases in the Contract Demands for other communities served by Northern in the same Rate Zone.

(b) When and to the extent that Northern elects to otherwise utilize the release capacity.

[2] *Transcontinental Gas Pipe Line Corporation*, Opinion No. 406, issued October 21, 1963, 30 FPC 1044, 1046, referred to hereinabove.

which would have been required of the five municipal parties in the present proceeding if they had requested in Opinion No. 324 the third year contract demand requirements as here reduced. Northern, while protesting the relevancy of this information, submitted answers to the interrogatories concerning the modifications of third year contract demands of other customers certificated in Opinion No. 324, as well as information concerning the contributions in aid of construction required of the various customers certificated by Opinion No. 324. It refused to provide information regarding the contributions in aid of construction which would have been required of the present parties on the grounds that such required a computation. Examiner Frazee upheld Northern's protest and refused to admit such information into evidence.

Although we would normally disagree with the examiner's ruling as to the irrelevancy of such information in this type proceeding, we believe the examiner's ruling should be upheld in the present case. It was developed on the present record that Northern, acting under an erroneous interpretation of its tariff provisions has permitted significant modification of the contract demand requirements of its various utility customers without reference to or approval by this Commission. Thus substantial modifications of the contract demand requirements of the various customers certificated in Opinion No. 324 have been effected, without protest of other customers and without question by the Commission. Our ruling in the present proceeding as to the requirements that all such modifications be submitted to and approved by the Commission will preclude a recurrence. Recognizing the substantial adverse economic impact which would result to innocent communities and customers from any effort on our part to retroactively impose the Opinion No. 324 contract demand requirements, we conclude that no regulatory purpose would be served by pursuing this matter further. But, we recognize the inequities which would result to the present parties were we to deny their requests. Thus, we conclude that the requested reductions of the five municipal customers in their third year contract demands should be approved but we would caution the industry that inflated market predictions, in the future, will not necessarily be accepted by the Commission as a basis for avoiding contribution in aid of construction that otherwise might be required of a customer.

Interveners contend that the real issue in the present proceeding is whether the municipalities, having chosen to purchase certain minimum volumes and having been certificated on that basis can now change the test of their certification. We disagree. In Opinion No. 324 the fundamental issue was the economic feasibility of the system expansion there proposed by Northern. We found that, subject to the terms and conditions therein prescribed, the proposed laterals met the tests of economic feasibility and were required by the public convenience and necessity. The issue now before us is whether it is in the public interest to continue to require Northern to hold unused pipeline capacity available for these towns when Northern's system is expanding rapidly and other uses of this capacity can be made, and where our refusal to do so would impose an unnecessary economic hardship on these distributors.

We have considered with care the exceptions to the examiner's decision not discussed herein, but have concluded that they are without substantial support in fact or reasonable basis in law, or are immaterial to decision in this case, and should therefore be denied. With the modifications described hereinabove, the presiding examiner's decision should be adopted herewith, as our decision in this case, effective as of the date of issuance of this opinion.

The Commission orders:

(A) The presiding examiner's initial decision issued herein on July 1, 1965, is modified as hereinabove set forth, and as so modified, is adopted as our decision in this case, effective as of the date of issuance of this opinion.

(B) North Central is authorized to defer the use of its third-year contract demand volumes authorized by Opinion No. 324, 22 FPC 164, as amended, until October 27, 1965.

(C) Except to the extent herein granted, the exceptions to the examiner's decision are denied.

INITIAL DECISION

OF THE PRESIDING EXAMINER UPON APPLICATIONS TO AMEND CERTIFICATES

(Issued July 1, 1965)

FRAZEE, *Presiding Examiner:*

This proceeding originates from a petition filed by the Northern Natural Gas Company (Northern) on June 12, 1964, for an amendment of the order accompanying Opinion No. 324 issued by the Commission on July 31, 1959, in *Northern Natural Gas Company*, Docket Nos. G–17485, G–17486, *et al.*, 22 FPC 164; affirmed *sub nom. Minneapolis Gas Co., et al.* v. *F.P.C.*, 278 F. 2d 870; cert. den. *Minneapolis Gas Co., et al.* v. *F.P.C.*, 346 U.S. 891, 81 S. Ct. 220. In its petition Northern requests authority to reduce the third year contract demand volume of natural gas which it has been certificated to sell to the City of Emmetsburg, Iowa.

Subsequent to Northern's filing, other petitions requesting reductions in their third year contract demand volumes were filed by the Iowa towns of Cascade, Graettinger, Woodbine, Osage,[1] and by North Central Public Service Company (North Central) for the Anoka, Minnesota, lateral.

Additionally, the town of Manilla, Iowa, filed a request for a reduction in its third year contract demand, but its filing is in the form of a complaint filed pursuant to Section 5(a) of the Natural Gas Act, as amended. It was docketed by the Commission as Docket No. RI'64–46.

On July 13, 1964, a "Joint Answer of Four Intervenors" was filed by Metropolitan Utilities District of Omaha, Nebraska, Minneapolis Gas Company, Northern States Power Company (Minnesota), and Western Power and Gas Company, opposing the granting of the requested reduction in the third year contract demand volume of the City of Emmetsburg.

On November 2, 1964, the Commission issued its order herein consolidating the proceedings, permitting intervention,[2] prescribing procedure, and fixing the date of hearing.

Hearings were held at which all parties were afforded an opportunity to offer evidence, and a substantial volume was offered and received. Further, those desiring to do so were permitted to file briefs.

The following tabulation summarizes the requests for reduction of the third year contract demand volumes which were certificated by the Commission's order accompanying its Opinion No. 324, issued July 31, 1959, in *Northern Natural Gas Company, et al.*, 22 FPC 164.

[1] By letter of the Secretary dated January 18, 1965, the request by the town of Osage, Iowa, to withdraw its petition filed October 2, 1964, seeking a reduction in its contract demand volumes was granted and its petition was severed from these proceedings.

[2] Permitted to intervene were: Towns of Manilla, Cascade, and Woodbine, Iowa (Joint Petition); Iowa Power and Light Company; Metropolitan Utilities District of Omaha; Minneapolis Gas Company; Northern States Power Company (Minnesota); Western Power and Gas Company; and Towns of Whittemore, West Bend, and Graettinger, Iowa (Joint Petition).

Petitioner and docket Nos.	Date of filing	3d year CD [3] certificated (Mcf @14.73)	CD presently sought	Reduction in CD requested (Mcf @14.73)
Cascade, Iowa, G–17485 and G–17486	8–27–64	702	609	93
Emmetsburg, Iowa, G–17486 [4]	8– 3–64	1,415	1,134	281
Graettinger, Iowa, G–17486	7–20–64 amended 9–28–64	552	400	152
Manilla, Iowa, RP64–46	6–30–64	477	391	86
North Central Public Service Co., G–17485 and G–17486	9– 2–64	[5] 10,387	8,959	1,428
Woodbine, Iowa, G–17485 and G–17486	8–27–64	551	403	148
Total		14,084	11,896	2,188

[3] Adjusted for the 2.5 percent increase in CD volumes caused by the reduced Btu value of Northern's gas resulting from the authorization in *Northern Natural Gas Co.*, 28 FPC 1155, 1164, to transport and deliver gas to its extraction plant near Bushton, Kansas.

[4] Northern had already filed a petition on June 12, 1964, requesting authorization to reduce Emmetsburg's CD from 1,415 to 1,134 Mcf.

[5] Total CD required to serve North Central's customers in the seven Minnesota communities of Anoka, Blaine, Champlin, Coon Rapids, Elk River, Lexington, and Spring Lake Park, all of which are situated on Northern's Anoka branch line, or lateral, just north of Minneapolis.

CASCADE

Natural gas service for the town of Cascade, Iowa, was found to be economically feasible by the Commission in its Opinion No. 324. A certificate was issued authorizing Northern to deliver and sell to Cascade a third year contract demand of 702 Mcf. Cascade issued and sold bonds to finance the construction of its distribution system. Initial service began in November 1961. Its system has operated at a financial loss since then. The manager of its natural gas system said the town's firm natural gas requirements have never been over 416 Mcf which was used on a peak day in December 1963, during its second heating season. He estimated Cascade's firm requirements for the 1966–67 heating season to be 526 Mcf, which is 83 Mcf more than the 609 Mcf of CD herein requested.

Cascade's problem is ascribable to those persons (or individuals) who made the original survey and estimates of the number of customers who would be attached in the first three years of service and the gas usage by each customer. The witness who made this survey prepared the estimates and testified for Cascade in the original application for a certificate authorizing service overestimated by 51, the number of residential space-heating customers that would be attached to the system in its third year of operation. He also over-estimated, by 700 cubic feet per residential customer, their gas usage on a peak day. A second witness, the present manager of its municipal gas system, says homeowners are reluctant to convert, or abandon, recently installed oil burning heating furnaces, to natural gas. However, by persistent effort, Cascade has been able to sell 85,858 Mcf of gas to interruptible customers in its third year of operation. However, the interruptible rates are so low that they produce little revenue over cost. Thus Cascade's problem arises primarily from its failure to attach the originally estimated number of residential space-heating customers and the failure of those attached to use as much gas as estimated.[6]

Cascade's operating loss from the beginning of service in November 1961 through December 1963 amounts to $22,914.77, including bond interest and redemptions. The reduction of 93 Mcf of CD herein sought would reduce its annual expenses, or costs of operation, by $3,610.26. After giving credit for additional estimated sales in 1965, and adding the costs for eleven months of

[6] The third year estimated usage was 45,000 Mcf, whereas actual usage was only 23,842 Mcf.

demand charges on 93 Mcf of gas, its estimated operating loss will amount to $6,309.41; however, if the CD is reduced by 93 Mcf annually, as herein requested, this estimated operating loss for 1965 would be reduced to $3,000, which is a considerable sum for a community of this size. Cascade has used its sinking fund and what cash remained from its initial financing to meet these operating losses. At the end of 1964 its bond retirement, or sinking fund, had a balance of $25. Therefore, even if the reduction of 93 Mcf of CD is allowed, the financial position of Cascade's municipal gas system will remain critical and, no doubt, require refinancing before it can operate profitably.

EMMETSBURG

Based upon the evidence of the record then before it, the Commission found, by its Opinion No. 324, the extension of natural gas service to the Emmetsburg Municipal Gasworks to be economically feasible and issued it a certificate on July 31, 1959, authorizing a contract demand (CD) of 738 Mcf/d for the first year (October 26, 1961 to October 25, 1962); for the second year 1,134 Mcf/d (as adjusted by Opinion No. 373, see fn. 3); and 1,415 Mcf/d for the third year (October 26, 1963 to October 25, 1964). Northern constructed the necessary facilities and initiated service to Emmetsburg in August 1961.

After receiving its certificate Emmetsburg promptly launched a promotional campaign to attach customers to its natural gas system. These efforts were expensive and the results were disappointing for, on the peak day of its first year, its total sales were only 707 Mcf, which was 31 Mcf less than its CD. Continuing its efforts to attach new customers, in the second year its peak-day total sales were 1,039 Mcf, which was 95 Mcf below its CD. Intensifying its efforts to attach new customers for its third year sales, the results were again below the original estimates, with peak-day third year actual sales at 1,094 Mcf, or 321 Mcf below the CD. The actual sales on these three year peak days included about 200 Mcf to interruptible customers who were not curtailed. Not withstanding its efforts to attach customers throughout the entire three year period the number of residential space-heating customers on November 13, 1964, was 189 less than estimated and the number of commercial space-heating customers was 13 less than was estimated at the time the record was made in Opinion No. 324 *supra*.

The witness now is the one who testified in the original hearing. He here admits his original estimates as to the number of customers and their gas usage were too optimistic. He now bases his testimony on actual experience rather than estimates and states that a contract demand of 1,113 Mcf would be ample to meet Emmetsburg's requirements during the 1965–66 heating season, but to make certain there will be no shortage on a peak day he recommends a CD of 1,134 Mcf. Thus, in its fifth year of natural gas service, Emmetsburg will need 281 Mcf less than he had originally estimated would be required in its third year of operation.

The witness for Emmetsburg in the first, as well as the present, hearing is unable to explain his over-estimating the gas requirements for Emmetsburg. He says he prepared estimates for other Iowa towns, using identical factors, and their third year usage exceeded his estimates. Because of this situation he offered no suggestion as to how over-estimating could be prevented in the future.

Emmetsburg issued and sold bonds to finance the construction of its natural gas plant. In its agreement with the bondholders, Emmetsburg must establish and pay substantial annual sums into a bond retirement fund and improvement fund. By the end of 1964—which was the latest report available—it had made these payments and reflected a net profit from its operation. Therefore, it would

currently be possible for Emmetsburg to pay for its certificated third year contract demand and yet show an operating net profit. The witness contends, however, the purchase of 281 Mcf of CD in excess of its requirements, even in its fifth year of service, keeps the cost of gas so high that potential customers will not convert from other fuels. On the contrary, a larger sales volume and additional customers would permit a reduction in local rates which would enable the city then to take additional CD.

GRAETTINGER

The town of Graettinger is served by Northern from the same branch line as Emmetsburg. Also, as in the case of Emmetsburg, the same witness here testifies for Graettinger who made its original estimates and who testified for it in the original proceedings. Based in part upon his estimates, the Commission in Opinion No. 324 found the extension of service to Graettinger to be economically feasible and issued it a certificate authorizing a CD of 552 Mcf for its third year requirements. Service was initiated in August of 1961.

Graettinger launched a promotional campaign to attach natural gas customers to its system. The campaigns were expensive and the results were disappointing; its experience in attaching gas customers was analogous to that of Emmetsburg and other applicants herein seeking a third year CD reduction. In the third year of service Graettinger had attached 17 less residential customers, 24 less residential space-heating customers,[7] and 8 less commercial space-heating customers than had originally been estimated. Graettinger's difficulty arises not only from its over-estimating the number and class of customers who would be attached for service in the third year, but also from the over-estimation of the peak-day usage of gas by these customers. The peak-day usage of an average residential space-heating customer was over-estimated by 180 cubic feet and the peak-day usage of an average commercial space-heating customer was over-estimated by 1,120 cubic feet of gas. On an annual basis the usage of an average residential heating customer was over-estimated by 28.5 Mcf and the average commercial heating customer by 122 Mcf.

Graettinger owns a municipal electric power plant which is operated by a Board of Trustees. It converted from fuel oil to natural gas in 1962 and has used about 85 Mcf per day. The Board of Trustees found they could purchase the electric energy requirements for the Graettinger municipal system from the U.S.B.R. from energy generated at dams on the Missouri River, at a substantial savings over their own generating costs, so in December of 1963 the municipal generating plant was closed and a substantial gas sale was lost to the town.

The evidence shows that if Graettinger is required to continue to pay the demand charges on 152 Mcf of gas which it does not need to meet its customer requirements, it will not be able to pay its operating costs, including the principal payments and interest due on its bonds. By the end of 1966 it will have exhausted its bond retirement and improvement funds and be in default on its bond obligations. Therefore, for these several reasons, it seeks a reduction of 152 Mcf in its third year certificated contract demand from 552 Mcf to 400 Mcf.

MANILLA

The Commission in its Opinion No. 324 found the extension of natural gas service to the Town of Manilla, Iowa, by Northern to be economically feasible and, based upon the evidence then before it, a certificate was issued authorizing a third year contract demand of 477 Mcf.

[7] The Census Bureau reported a 1950 population of 1,016 for Graettinger and a 1960 population of 879, a drop of 13.5 per cent.

Construction of its Municipal Gas Department was started in April 1961 and service was initiated when Northern made gas available in August 1961. Manilla issued and sold bonds to provide the funds for the construction of its gas distribution system.

Manilla's present predicament arises from its having originally over-estimated the number of customers who would convert to natural gas by the third year of service. Additionally, the gas usage factor was unusually large per average commercial space-heating customer. There is a shortage, as compared with actual, of 64 residential space-heating customers and 2 commercial space-heating customers from the number originally estimated for the third year. (Exh. 202) It was originally estimated the residential space-heating customers would use 38,080 Mcf annually, however, only 21,600 Mcf was used in the third year. It was also estimated that 39 commercial heating customers would use 105 Mcf on a peak day; in fact, however, 37 such customers used only 61 Mcf on the peak day of the third year. Therefore, experience shows the town would not have used its third year CD of 477 Mcf even if it had connected all the customers estimated. The population of the town decreased from 1,035 in 1950 to 921 in 1964, an 11 per cent loss. The effect was a decline in business economy resulting in the closing of at least four commercial establishments. Most of the homes in the town are occupied by elderly retired inhabitants[8] with incomes derived from farm crop rentals or pensions. Natural gas is not competitive with other fuels[9] in Manilla, which accounts for a reluctance to convert.

Manilla seeks to have its contract demand reduced from 477 Mcf to 391 Mcf, a reduction of 86 Mcf of gas, which would effect a reduction of $3,008.28 in its annual cost of gas. Its costs, including the payment of principal and interest on its bonds, for 1964 resulted in a net operating loss of $4,177.64 (this included the payment of CD charges on 477 Mcf for only one month). Its estimated net loss, after paying 11 months of CD charges on the 86 Mcf not needed, would amount to $6,222.73. With this operating record, Manilla contends it cannot meet its expenses if it is required to continue to purchase the certificated third year CD of 477 Mcf. The superintendent of the gas department testified that firm gas requirements have never exceeded 260 Mcf and that, in his opinion, a CD of 374 Mcf would be sufficient to meet its requirements for the 1966–67 heating season. He stated that a CD of 391 Mcf would meet their gas requirements for many years to come.

WOODBINE

In Opinion No. 324 the Commission authorized the Iowa Power and Light Company (Iowa Power) to distribute natural gas in the town of Woodbine, Iowa, and authorized Northern to sell and deliver gas to Iowa Power for distribution in Woodbine on condition that Iowa Power make a $14,200 contribution to Northern toward the cost of construction of the Woodbine measuring station. Thereafter, on November 7, 1960, Woodbine, by its Ordnance No. 63, cancelled and terminated the gas distribution franchise which had been granted to Iowa Power on June 4, 1954. The town of Woodbine then filed an application with the Commission on August 28, 1961, as amended on November 15, 1961, to amend the order accompanying Opinion No. 324 by substituting the town of Woodbine for Iowa Power as the gas distributor for Woodbine. Northern, in an answer to Woodbine's application, said it would sell and deliver gas to Woodbine if Woodbine would sign service agreements and make the $14,200 contribution in aid of

[8] More than 63 per cent of these houses are occupied by only one elderly person.

[9] Statistics show the cost per heating season for heating an average residence with fuel oil to be $147.42, with LPG to be $152.10, and with natural gas $180.00.

construction of the measuring station. Woodbine agreed and estimated its first, second and third year peak day CD would be 393 Mcf, 466 Mcf, and 538 Mcf,[10] respectively. The Commission, on February 20, 1962, issued its order in *Northern Natural Gas Company, et al.*, 27 FPC 382, amending Opinion No. 324 and authorizing Northern to sell and deliver gas to Woodbine for its municipal distribution system, instead of Iowa Power, provided Woodbine made the contribution in aid of construction.

Woodbine issued and sold gas revenue bonds to finance the construction of its distribution system. It commenced operation in September 1962. Now, in its third year of operation, Woodbine seeks a reduction in its contract demand to 403 Mcf, its estimated first year CD volume. Its witness said even the first year CD of 403 Mcf was greater than the town's requirements of 319 Mcf for the 1964–65 heating season. Woodbine's difficulty in not being able to use its third year CD is due to originally over-estimating the number of customers who would convert to natural gas. It was originally estimated Woodbine would attach 293 residential space-heating customers by its third year of service; it actually attached 147.[11] The original gas usage factor for residential space-heating customers proved to be relatively accurate.[12] Like other applicants herein, Woodbine experienced a decline in population from 1,467 in 1940 to 1,304 in 1960. This witness said 75 per cent of the town's population consists of retired farmers with small incomes or pensions who are reluctant to incur the costs for converting their present heating systems—mostly fuel oil—to natural gas.

According to the record, Woodbine paid its 1964 bond interest and principal from sources other than gas revenue. Its gas department has been operating at a loss since it began operations. At the end of 1964 its operating loss, including interest and principal payments on bonds, was $29,020.33. The annual CD charges on the 148 Mcf of gas—the amount of the reduction herein requested—amounts to $5,177.04. Its witness, the superintendent of the department, estimates the net operating loss to approximate $11,440 for the year 1965. Under these circumstances, if the reduction in CD is allowed as requested, Woodbine will continue to operate at an annual net loss of approximately $6,000 unless it can attach additional customers and increase the gas usage.

NORTHERN'S EVIDENCE

Northern's evidence consisted primarily of statements concerning the basic problem of economic feasibility standards and market estimates in certificate proceedings.

When Northern presented its evidence upon which Opinion No. 324 was issued, its branch line extension policy simply required that a branch line return sufficient revenues by the fifth year of service to pay for the gas in the field plus the out-of-pocket costs (compressor fuels, etc.) of transporting the gas to the town border stations, for the fixed and operating charges on the branch lines, and, in addition, contribute something—no matter how little—to Northern's main-line cost of service. In that matter, however, Northern presented engineering evidence and supporting data based upon the third year of service and the Staff,

[10] Adjusted upward from 393 to 403, 466 to 478, and 538 to 551 by new service agreements filed as a result of the Commission's order in *Northern Natural Gas Co.*, 28 FPC 1155. See fn. 3 *supra*.

[11] At the end of its third year of operation, which was 1964, the town actually had 238 gas customers of all classes. See Exh. 204, p. 1 of 2, col. 4, ln. 8. It was estimated it would attach an additional 26 customers, of all classes, in 1965. See Exh. 204, p. 1 of 2, col. 5, ln. 8.

[12] It was originally estimated that 293 residential space-heating customers would use 34,281. The 147 customers actually attached used 17,199.

in their brief, contended that the third year, rather than the fifth year, was the proper test period for determining the feasibility of a given branch line. This was adopted by the Commission. *Northern Natural Gas Co.*, 22 FPC 164, 172–173, wherein it was said "where the annual revenues from a given branch line on the third year basis will not be sufficient to meet the costs associated with the measuring stations for that particular branch line, service on such branch line must be denied unless the distributors for the communities served by the branch line make an appropriate contribution to the cost of constructing the measuring stations. Likewise, where the revenues are insufficient not only to cover the cost of the measuring stations, but also fail to cover the costs of the branch line, service must, of course, be denied unless a contribution is made not only for the construction of the necessary metering stations but also for the branch line." This reduction from five to three year economic feasibility requirement has strengthened Northern's branch line standards. Northern now uses this third year test of economic feasibility and applies the Opinion No. 324 branch line contribution formula. *Northern Natural Gas Co.*, 30 FPC 859, 865, particularly the initial decision of Presiding Examiner Allen C. Lande in that case as reported at 30 FPC 869, at page 880, regarding the application of Tipton, Iowa, for initial service.

Northern's policy witness states that the economic feasibility tests become meaningless when distributors fail to purchase their third year CD volumes on which economic feasibility was based when the necessary facilities were authorized. Northern is also very much aware of the dangers of over-estimating the market requirements, which was the primary difficulty experienced by the applicants in this hearing. To cope with this problem Northern has established a department in its Marketing Division which now makes an actual field survey of each new community proposed for natural gas service. Unless the applicant and Northern's Marketing Division are within five percent of each other, the applicant must review with Northern each factor used by it in making its market estimate. Unless the applicant will reduce its market estimate to levels considered realistic by Northern's experience then, as in the above-cited case of Tipton, Iowa, Northern will not agree to submit the proposal to the Commission for authorization.

Northern's position, at this hearing, is that it is willing, under the circumstances set out on this record, to amend its service agreements, as requested by the applicants herein, to provide for the purchase of reduced CD volumes upon a finding by the Commission that the reductions are in the public interest.

Northern's response, to the contention of the applicants that they are entitled to the requested reductions of CD volumes under Section 17.5 of its tariff, is that the distributor is only entitled to such a reduction in CD when there is an offsetting increase in the same rate zone and then only if the distributor has paid the full third year CD for at least one heating season. Northern says that until a distributor has paid for its third year CD volume it is still considered to be "new service" and that Northern is prohibited, by the Commission's certificate authorizing the service, from reducing the CD therein certificated. Northern says, after the payment of the third year CD, then the distributor becomes "old service" and qualifies for a reduction under Section 17.5 upon request.

Northern has not uniformly applied this rule. It has made exceptions and, of course, the applicants point to them. For example, see Docket No. RP62–5, encompassing Northern's application to reduce the CD of Circle Pines, Minnesota, upon a showing of dire financial circumstances; also Northern's deferral of the third year CD of North Central herein considered, as well as reductions to Western Power and Gas Company, Iowa Electric Light & Power Company, and its own Peoples Natural Gas Division.

Northern's response to the applicants' evidence that exceptions have been granted to certain distributors, some are referred to *supra*, is that each of the reductions in contract demand, with the exception of Circle Pines,[13] has been clearly set forth in the certificate applications filed by it in Docket Nos. CP62–178, CP63–219, and CP64–112. Northern alleges that Exhibit I of those applications reflects the reductions both by distributors and by towns. Reductions by towns are shown in the service agreements submitted as a part of Exhibit I, and reductions by distributors are shown in the summary of each distributor's CD subdivided by billing group. That this unorthodox manner of amending previously issued certifications was not acceptable to the Commission was clearly stated in *Transcontinental Gas Pipe Line Corporation*, issued October 21, 1963, as Opinion No. 406, 30 FPC 1044, 1046, where, under similar circumstances, the Commission said it was not foreclosed from passing upon the merits of a proposed reduction in CD simply because a new service agreement reflecting the reduction had been filed with and accepted for filing by the Commission. The fact that the pipeline and the distributor have agreed to the reduction does not establish that the public interest has been so well considered, or protected, that no further inquiry need be made.

Northern's present policy is to refuse all requests for reductions of a contract demand. Thus, a distributor desiring a change in contract demand must petition the Commission for such authorization. Northern's policy witness testified that, as it gains operating experience, Northern has developed some principles which it thinks are applicable to the granting of any requests for changes in CD volumes by these, and any future, applicants. Northern suggests the first determination to be made is whether the considerations for the reductions will outweigh any detriment or burden that might accrue to its existing customers. When this determination has been made, then Northern believes the reductions should be authorized if each of the following suggested findings can be made:

(1) That the over-estimation of third year contract demand resulted from an honest mistake of fact;

(2) That the distributor has made all reasonable efforts required to develop the load and that there will not be such load growth in the community so as to absorb the third year contract demand within a reasonable period of time;

(3) That the investment in the distribution plant is prudent;

(4) That all peak-day requirements, up to at least the original third year contract demand, will be met by the purchase of additional contract demand from Northern and not by the construction, expansion or utilization of peak-shaving facilities;

(5) That payment of the demand charge for the third year volumes would result in an undue financial burden on the distributor;

(6) That it is in the public interest for Northern and its other customers to in effect be guarantors of the risk money invested by the bondholders.

---

[13] (a) Regarding the changes in CD for Circle Pines, Northern says, in Appendix A to its reply brief herein, that Docket No. RP62–5 authorized a CD of 357 Mcf. Docket No. CP62–178 authorized a CD of 450 Mcf. Docket No. CP63–219 authorized a CD of 670 Mcf, and that Docket No. CP64–112 authorized a CD of 870 Mcf.

(b) Regarding the failure, or refusal, of Duluth to take its third year CD of 25,548 Mcf. Northern says in Appendix A to its reply brief, that the Commission authorized a reduction of 9,148 Mcf in Docket No. CP62–178.

(c) Northern also says in its Appendix A to its reply brief that the changes in CD for the Western Power & Gas Co. were authorized in Docket No. CP64–112; the changes in CD for the Iowa Electric Light & Power Co. were authorized in Docket Nos. CP63–219 and CP64–112, and the changes in the CD for its own Peoples Natural Gas Division were authorized in Docket No. CP64–112.

Despite the fact that the applicants and others who were certificated in Opinion No. 324 have failed to purchase their authorized third year CD, Northern has annually requested the Commission for authority to expand its system capacity to meet the increased requirements of its customers. This is illustrated in the following tabulation:[14]

Heating season and docket numbers	Zone 1 (Mcf)	Zone 2 (Mcf)	Zone 3 (Mcf)	Zone B (Mcf)	Zone C (Mcf)	Total (Mcf)
1962–63 (CP62–178)	299	20,046	13,858	915	470	35,588
1963–64 (CP63–219) (CP63–150)	5,799	13,538	10,672	173	6,000	36,182
1964–65 (CP64–112)	474	8,160	11,427	5		20,066
Total increase	6,572	41,744	35,957	1,093	6,470	91,836

The Metropolitan Utilities District of Omaha and the Minneapolis Gas Company, intervenors, are local gas distributors who purchase their natural gas requirements from Northern. These two intervenors offered no admissible evidence, yet in their joint brief they argue that the relief sought by the applicants would apply a retroactive economic feasibility test which would unlawfully discriminate against these intervenors by holding Northern's rate structure at a higher level than would be feasible if the relief sought was denied. The intervenors allege, in their brief, the failure of these applicants to pay for their full third year CD will not reduce Northern's cost of service sufficiently to permit lower rates for the intervenors, and further, that if the relief sought is granted, then the applicants should be required to make contributions in aid of construction.

In their joint brief these intervenors allege the third year annual revenue deficiency to Northern would be $54,592 if the relief is granted to Emmetsburg, Graettinger, Manilla, and Woodbine. The record shows Northern has annually requested and received authorization from the Commission to increase its system capacity to meet increased customer demand. A revenue deficiency of $54,592 in Northern's present cost of service would be *de minimis non curat lex*. The argument to require a present contribution in aid of construction from the applicants falls short of being convincing for the reason that sales in the rate zone affected continue to increase and the test is not what an individual distributor purchases, but the total volume that is sold on the entire branch line or lateral. The arguments of these two intervenors appear to be a continuation of those made by them to the Commission during the course of the hearing in which Opinion No. 324 was issued and the petition for court review thereof filed by them. *Minneapolis Gas Company, et al.* v. *F.P.C.*, 278 F. 2d 870. There they objected to the Commission's orders because, on the basis of the rates then charged Northern's customers, the new service would not yield in the first three years as high a percentage of profit as the present service, and might therefore tend to keep up the rates which petitioners pay to Northern. The Court upheld the finding of the Commission (in Opinion No. 324) that Northern's project to attach the new communities would be, under the conditions attached, economically feasible and required by the public convenience and necessity even though the new service might not yield in the first three years as high a percentage of profit as Northern's service at that date.

The evidence in this record, based upon the actual operating experience of the natural gas systems in the towns of Cascade, Emmetsburg, Graettinger, Manilla and Woodbine, is conclusive that the present economic difficulties of

[14] The tabulation does not include Northern's expansion authorized by Opinion No. 345, on June 28, 1961, 25 FPC 1234, for the 1961–62 heating season of 99,050 Mcf of additional CD, nor does it include the 75,000 Mcf per day to Michigan Wisconsin Pipe Line Company.

their gas distribution systems is due to the initial inaccurate estimates of the number of customers of all classes, who would be attached during the first three years of service and the volumes of gas to be used by them. The Staff says, in their brief, there is no reason to require Northern to hold unused pipeline capacity available for these five towns when Northern's system is expanding rapidly; this pipeline capacity can well be diverted to other Northern customers for additional revenues from both demand and commodity charges. Staff recommends approval of the relief requested by these five towns. Northern, the supplier, has no objection to granting the relief sought by these five towns, providing the Commission finds it to be in the public interest.

Witnesses for each of the towns of Cascade, Emmetsburg, Graettinger, Manilla, and Woodbine testified there was no present possibility of reducing the rates being charged their consumers for natural gas, but there was the likelihood that rates might be increased, unless the relief sought was granted. Rate reductions would make gas service more competitive with other fuels in these towns.

Section 7(e) of the Natural Gas Act requires an initial finding that any proposed service or sale is required by the present or future public convenience and necessity. This finding was initially made by the Commission in *Northern Natural Gas Co.*, Opinion No. 324, 22 FPC 164, 178. These five towns now request a partial abandonment of a part of the contract demand heretofore found to be required to be allocated to them by the public convenience and necessity. There were objections by several intervenors herein that Opinion No. 324 is *res judicata* and cannot now be amended in this proceeding. The purpose of the Natural Gas Act was to underwrite just and reasonable rates to the consumers of natural gas. *Federal Power Commission* v. *Hope Natural Gas Co.*, 320 U.S. 591. The original Section 7(c) of the Act provided it was "the intention of Congress that natural gas shall be sold in interstate commerce for resale for ultimate public consumption for domestic, commercial, industrial, or any other use at the lowest possible reasonable rate consistent with the maintenance of adequate service in the public interest."[15] This intent of Congress to give full protective coverage to the consumer as to price is further emphasized in Section 5 of the Act, which authorizes the Commission to investigate existing rates and charges and to fix them at a just and reasonable level. That the Commission should maintain full and continuing supervision over certificates of public convenience and necessity issued by it therefore seems apparent from the Act. That the doctrine of *res judicata* can have no application to a proceeding which involves a determination of the present or future public convenience and necessity with respect to the continuance or abandonment of natural gas service was established in *Panhandle Eastern Pipe Line Co.* v. *Federal Power Commission*, 236 F. 2d 289, 292, where it was said "In a situation such as this the Commission is exercising delegated legislative power to make a rule to guide the conduct of the parties in the future."

Since the Commission has no jurisdiction over the five towns, they cannot be compelled to take-or-pay for the CD volumes. However, the Commission does have jurisdiction over Northern; the question therefore is simply, should Northern be required to hold pipeline capacity available for these five towns when there is an express showing upon this record that it may never be needed. In *Transcontinental Gas Pipe Line Corp.*, Opinion No. 406, 30 FPC 1044 (issued October 23, 1963), the Commission determined in an analogous situation it was in the public interest to permanently authorize a reduction in a previously authorized third year CD volume.

[15] The 1942 amendments to Section 7 of the Act were not intended to change this declaration of purpose. See House Interstate and Foreign Commerce Committee report No. 1200, H.R. 5249, and Senate Commerce Committee report No. 948, 77th Congress.

Therefore, from the record herein, it is found and determined the public convenience and necessity requires the granting of the relief sought by the towns of Cascade, Emmetsburg, Graettinger, Manilla, and Woodbine, and their contract demand volumes will be reduced as hereinafter ordered.

NORTH CENTRAL PUBLIC SERVICE COMPANY

At the time of the original proceedings culminating in Opinion No. 324, North Central was serving only four Iowa communities. It sought and received from the Commission in Opinion No. 324 an allocation of gas from Northern sufficient to serve the requirements of seven additional communities, Anoka, Blaine, Champlin, Coon Rapids, Elk River, Lexington, and Spring Lake Park, Minnesota. Northern, without contributions in aid of construction, installed a lateral line from which it then proceeded to sell and deliver gas to the municipal gas system of Circle Pines and North Central's seven towns. This lateral became known as the Anoka Branch Line.

In 1953 North Central commenced its efforts to secure gas service for these seven towns.[16] However, it was not until July 31, 1959, that service was authorized by the Commission in Opinion No. 324.

On March 25, 1959, the town of Coon Rapids, Minnesota, granted North Central a gas distribution franchise upon condition that if the Federal Power Commission had not approved Northern's proposed service to Coon Rapids by August 1, 1959; or it became evident to North Central that natural gas would not become available to Coon Rapids in 1959; then North Central would construct a distribution system and a propane plant to serve manufactured gas to a specified part of the town by October 1, 1959. North Central was further required to post a $100,000 performance bond.[17]

North Central witnesses state they were unable to determine prior to August 17, 1959, [18] when natural gas would be made available to it by Northern for Coon Rapids. Under the terms of its franchise and performance bond, North Central says it was required to commence planning its propane plant before May 15, 1959. It purchased a site and started construction in the summer of 1959 and its five, 30,000 gallons each, LPG tanks were shipped in July 1959. Upon learning that Northern would be able to make gas available on the Anoka Branch for distribution in Coon Rapids in 1959, North Central delayed completion of its propane plant and concentrated on installing the Coon Rapids natural gas distribution system. The propane plant was later completed at a cost of $235,000. It is capable of delivering 225 Mcf of 1,360 Btu propane gas per hour. However, because the plant produces 1,360 Btu propane gas, the plant cannot be used to supply more than fifty (50%) per cent of Coon Rapids' requirements [19] without North Central's customers encountering difficulties with their gas burners. (Tr. 4453–56.) North Central's first year contract demand, which became effective in November 1959, from Northern for the seven communities served off the Anoka Branch was 7,058 Mcf. In October 1960, the second year CD was placed in effect. Since then North Central has repeatedly told Northern it did not want its third year CD made effective and Northern has deferred placing the third year CD in effect for the years beginning October 1961, October 1962, and October 1963. North Central witnesses state they have repeatedly sought release by Northern of the excess of 1,428 Mcf of third year CD over their second year CD (Exh. 213).

[16] See Docket Nos. G–2063, G–2399, and G–12241.

[17] See Exh. 210.

[18] Northern's letter was received by North Central on August 17, 1959, saying that natural gas service might be available for Coon Rapids in 1959. See Exh. 211.

[19] The Coon Rapids distribution system serves part of the gas requirements for the nearby towns of Anoka and Blaine. (Tr. 1456.)

but Northern has replied it would be necessary for North Central to purchase its full third year CD effective October 1964. Thus, in its sixth year of service to Coon Rapids, and the other towns served from the Anoka Branch, North Central is required for the first time to pay the CD charges on its third year volume of gas authorized by this Commission.

North Central requests a reduction of 1,428 Mcf from its third year CD of 10,387 Mcf. This would reduce its allocation for the Anoka Branch Line towns to the second year CD volume of 8,959 Mcf as authorized by Opinion No. 324 as adjusted by Opinion No. 373 (see fn. 3 *supra*).

Initially North Central's attaching of customers and their gas usage for the Anoka Branch towns generally followed the pattern of the other applicants in this proceeding—they were over-estimated. However, beginning with 1962 the actual customers attached and their gas usage exceeded the estimates for that period. North Central contends its second year CD volume of 8,959 Mcf, plus the 225 Mcf of 1,360 Btu per hour volume from its Coon Rapids propane plant, gives it a volume deliverability on the Anoka Branch which is greater than the requirements of its customers and, therefore, it does not need, because of the propane plant, any more than the second year CD of 8,959 Mcf from Northern. North Central's evidence shows the demand charge on this 1,428 Mcf annually amounts to $55,812.

Since the filing of Opinion No. 324 on July 31, 1959, Northern has been authorized in *Northern Natural Gas Company*, Opinion No. 404, 30 FPC 859, issued September 30, 1963, to deliver first, second, and third year CD volumes of 500, 1000, and 1,650 Mcf, respectively, to North Central for the beginning of natural gas service in the towns of Big Lake, Buffalo, and Monticello, Minnesota. (Exh. 212.) These three towns are served from the Anoka Branch Line. North Central's evidence on this record combines the gas requirements of these three towns with those certificated by Opinion No. 324. (Exh. 214, p. 2.) Therefore, to sufficiently understand the current situation of North Central it is necessary to combine the third year CD volumes certificated by Opinion Nos. 324 and 404 in order to compare the actual requirements of North Central's customers with the CD volumes which the Commission has authorized Northern to deliver to North Central. Based upon the testimony of North Central's controller and treasurer (Tr. 4463–65), the Staff in their brief (pps. 33–34) present a tabulation of this comparison, as follows:

	1964–65 (*Mcf*)	*1965–66* (*Mcf*)
Third-year volume certificated in Opinion No. 324, 22 FPC 164, Exh. 212	10,387	10,387
Second-year and third-year volumes certificated in Opinion No. 404, 30 FPC 859	1,000	1,650
Total contract demand Northern is authorized to deliver to North Central to serve Anoka Branch Line communities	11,387	12,037
Total estimated peak-day requirements of all communities served by North Central on Anoka Branch Line, Exh. 214, p. 3	12,720	13,720
Less the total contract demand volume North Central is entitled to purchase from Northern for Anoka Branch Line communities	11,387	12,037
Amount by which peak-day requirements *exceed* the total third-year contract demand volume which Northern is authorized to deliver to North Central	1,333	1,683

From the Staff's tabulation it appears obvious that North Central will need all of its third year CD volumes from Northern in order to meet the requirements of its customers on a peak day and, in addition, it would be necessary for it to use its propane plant to furnish an additional 1,333 Mcf on a peak day during the 1964–65 heating season, and 1,863 Mcf on a peak day during the 1965–66 heating season.

The North Central situation is quite different from the five towns previously considered. Without the peak-shaving plant volumes North Central would require more third year CD volumes than it is presently authorized. That Northern has been cognizant of and sympathetic to North Central's investment problem in its peak-shaving plant is well shown upon this record by Northern's having deferred for three successive heating seasons the filing of a service agreement for the third year CD volumes. This deferral has been of great financial benefit to North Central for, during this period, it connected more customers who used more gas than was originally estimated. So, by the time North Central was required by Northern to purchase its third year CD, its market requirement was 1,333 Mcf greater than its CD. From this record it also appears that North Central's need for additional quantities of natural gas will increase annually. North Central's present market situation and forecasts appear to indicate an increasing demand by present and potential customers for additional volumes of natural gas. North Central offered no evidence showing an economic justification for its request for a reduction in its third year CD. If the requested relief should be granted, then North Central would increase the output of its propane plant. Northern's policy witness objects to a reduction of North Central's third year CD to permit greater use of the propane plant. His testimony is that North Central should be required to take its third year CD and, if it needs additional volumes of "swing" gas, then it could economically make use of its propane plant.

North Central knew that Northern had requested authorization from the Commission to initiate natural gas service to Coon Rapids before the franchise was accepted, in fact a date for the hearing upon Northern's application had been fixed before the franchise was accepted. North Central wanted the Coon Rapids distribution franchise and was willing to asume the conditions imposed in it. This risk was a management decision by North Central and, upon this record, it has demonstrated no economic difficulties for having accepted the franchise and constructed the propane plant.

North Central has failed to establish upon this record by a preponderance of the evidence that its third year CD volume should be reduced. Therefore, having failed to sustain its burden of proof and upon the grounds hereinabove considered, North Central's request should be denied.

NORTHERN'S TARIFF

Each of the parties herein contend they are entitled to the reductions requested under Section 17.5 of the General Terms and Conditions of Northern's Tariff. In Opinion No. 324 the Commission approved Northern's proposed tariff and rate zones for servicing the new communities. Standard form service agreements which were executed by each of applicant's herein contain identical provisions, as follows:

> *Section 3. Additional Volumes of Gas.* The Contract Demand for a community may be increased or decreased as provided in Northern's applicable Rate Schedule(s). * * *
>
> * * * * * * *
>
> Section 5. * * * This contract shall be subject to the provisions of such rate schedules and the General Terms and Conditions applicable thereto

on file with the Federal Power Commission and effective from time to time, which by this reference are incorporated herein and made a part thereof. Northern's filed tariff contains Section 17.5 as follows:

(17.5) *Gas Utilities' Right to Decrease the Contract Demand*: The Gas Utility shall have the right to decrease the Contract Demand for any community effective with the billing month of November of any year, under any of the following conditions:

(a) When and to the extent that the capacity so released can be made available to and is offset by increases in the Contract Demands for other communities served by Northern in the same Rate Zone.

(b) When and to the extent that Northern elects to otherwise utilize the released capacity.

Northern's filed tariff sheets, which became effective on December 27, 1964, set forth the contract demand volumes for each community by rate zone. The customers served from the Anoka Branch are in Northern's Rate Zone B. These rate zones are based upon pipeline mileages north of the Bushton, Kansas, station. Counsel for Northern stated for the record (Tr. 4362–3) that, as of the date of the hearing "for Zone B there is a decrease (of CD) of 9,285 Mcf" from the third year CD authorized by Opinion No. 324, as adjusted by Opinion No. 374, "and in explanation of that figure I might mention that the community of Duluth, Minnesota,[20] represents 9,148 Mcf of that and the community of Circle Pines [21] represents 516 Mcf. In adding those up, you will come to a figure greater than 9,285 Mcf, and the difference is that other towns in Zone B have increased a total of 379 Mcf." However, of all the 342 new towns certificated for service in Opinion No. 324 only 282 had been attached. These 282 towns have a third year CD of 199,951 Mcf, as adjusted by Opinion No. 374, and they are collectively purchasing 18,830 Mcf less than this volume.[22]

[20] In Opinion No. 324 Northern was authorized to sell and deliver to Duluth a third year CD of 24,925 Mcf. This authorization was based upon Duluth's estimate of its market requirements. Northern made its own independent check of Duluth's estimate and concurred with Duluth there was a market for a third year CD of 24,925 Mcf. Duluth, like the other communities in Opinion No. 324, agreed to execute service agreement contracts for the CD authorized. When the time arrived for Duluth to sign the agreement for its third year CD it refused to sign because its actual gas usage had failed to come up to its estimates by some 9,148 Mcf (Duluth's CD as of the hearing was 16,400 Mcf. (Tr. 4580.)) Northern has participated with Duluth, and on its own, in sales promotion and advertising programs "to help get the loads on as an encouragement for them (Duluth) to execute the agreement." Northern says "We have done about everything we could think of to get them to execute that contract" for their third year CD but without success.

[21] On November 21, 1961, [unreported] the Commission issued an order in Docket No. RP62–5 authorizing Northern to reduce the CD of Circle Pines to 357 Mcf effective from October 27, 1961, to October 27, 1976. Northern had filed a superseding service agreement to this effect on October 25, 1961. By this reduction Circle Pines is taking 870 Mcf less than its third year CD.

[22] The greatest failure of Opinion No. 324, certificating distributors to purchase their third year CD volumes, occurred in Northern's Rate Zone 3 as is illustrated by a tabulation in the Staff brief as prepared from the testimony of a Northern witness (Tr. 4548–49):

Distributors Serving communities certificated	Number of communities served	3d year CD certificated by opinion No. 324 (Mcf)	Contract demand now being purchased (Mcf)	(Decrease) below or increase above 3d year CD (Mcf)
Central Natural Gas Co	10	4,095	3,415	(680)
Interstate Power Co	1	702	900	198
Iowa Electric Light & Power Co	23	21,040	12,296	(8,744)
Northwestern Public Service Co	9	2,517	2,587	70
The Western Power and Gas Co	4	2,133	1,051	(1,082)
Northern's Peoples Natural Gas Division	66	26,136	25,170	(966)
Total Zone 3 net decrease in contract demand below the third-year contract demand certificated by Opinion No. 324				(11,204)

The Staff contends Section 17.5 of Northern's tariff is not applicable to the relief sought by these applicants. They rely upon *Transcontinental Gas Pipe Line Corp.*, 30 FPC 1044, wherein the Commission said that any reduction in contract demand must be authorized by the Commission under the Natural Gas Act even though the pipeline and the distributor had agreed upon the reduction and had signed new service agreements. To permit any interstate natural gas pipeline to make changes in previously issued Commission certificates would defeat the purpose of the Act. Section 154.21 of the Commission's Regulations under the Natural Gas Act requires the filing of a new service agreement prior to the beginning of service under that agreement. Section 154.22 of the Regulations provides " * * * that no natural gas company shall *file* under this part any new schedule or contract for the performance of any service for which a certificate of public convenience and necessity must be obtained pursuant to Section 7(c) of the Natural Gas Act until such certificate *has been* issued. * * *" (Emphasis supplied). *Fuels Research Council, Inc., et al.*, 30 FPC 1138, 1142, fn. 4. It is clear, therefore, that Section 17.5 of Northern's tariff is not applicable and that the relief sought can only be granted by the Commission upon the filing of an application by Northern to amend the existing certificate or for the issuance of a new certificate. This follows the orderly procedure provided by the Regulations of the Commission promulgated under the Natural Gas Act.

The intervenors allege a change in CD, as sought by these applicants, would only encourage future applicants for new gas service to overestimate the number of potential customers and their gas usage as a hedge against having to make a contribution in aid of construction. As outlined upon this record, and specifically commented upon in this decision, Northern has established rigid standards of its own which it says must be met before it will request authorization to construct facilities to initiate new service to a new distribution system. Northern's standards should be the minimum guide-line test for other interstate pipelines considering the attachment of new distributors. The Staff, in its brief, says that in the future it will apply more rigid standards in considering market estimates for new distribution systems. The Staff further states that any proposed future service based on a forecast of economic feasibility involving the attachment of more than 50 percent of the potential number of residential space-heating customers should be denied or, if certificated, a condition be attached requiring cash deposits from enough prospective customers to assure the economic feasibility of the project. Such conditions have been attached in the past. *Chattahoochee Valley Gas District*, Docket No. CP63–163, 32 FPC 811, September 17, 1964. Thus the Staff, as well as the Commission, are formulating economic feasibility standards to be applied in future applications for the attachment of new distribution systems.

FINDINGS AND CONCLUSIONS

Upon consideration of the entire record in this proceeding, the evidence adduced and the briefs filed, the Examiner finds and concludes, in addition to the findings and conclusions hereinabove stated, that:

(1) The present and future public convenience and necessity permit and require a permanent reduction of Northern Natural Gas Company's allocation to Cascade by 93 Mcf (to a CD of 609 Mcf); to Emmetsburg by 281 Mcf (to a CD of 1,134 Mcf); to Graettinger by 152 Mcf (to a CD of 400 Mcf); to Manilla by 86 Mcf (to a CD of 391 Mcf); and to Woodbine by 148 Mcf (to a CD of 403 Mcf).

(2) The present and the future public convenience and necessity does not permit nor require a reduction of Northern Natural Gas Company's allocation of natural gas to the North Central Public Service Company.

(3) The granting of the foregoing reductions in contract demand volume will not discriminate against any Northern customer nor invalidate the branch line economic feasibility formula of the Commission in *Northern Natural Gas Co., et al.*, 22 FPC 164, 172.

(4) The procedure for obtaining a change in the contract demand volume is to file an application requesting an amendment of the certificate order which originally authorized the contract demand volume.

(5) The legal doctrines of *res judicata* and collateral estoppel are not applicable and do not prohibit the Commission from considering, and amending, a previously issued certificate of public convenience and necessity.

ORDER

WHEREFORE, *It is ordered*, subject to review by the Commission on appeal, or review by the Commission on its own motion, as provided in its Rules of Practice and Procedure, that:

(A) Ordering paragraph (A) of the Commission's order accompanying its Opinion No. 324, issued July 31, 1959, in *Northern Natural Gas Co.*, 22 FPC 164, 169, as amended, is hereby further amended to reduce the contract demand volumes of the distribution systems in the towns of Cascade, Emmetsburg, Graettinger, Manilla, and Woodbine, Iowa, to 609 Mcf, 1134 Mcf, 400 Mcf, 391 Mcf, and 403 Mcf, respectively, effective as of October 27, 1964, and subject to Northern's agreement to refund the difference in demand charges collected on presently effective contract demand volumes and the reduced contract demand volumes provided for by this order.

(B) As a condition to the amendment of paragraph (A) of the order accompanying Opinion No. 324 Northern is hereby required to file an application for amendment of the order originally authorizing third-year contract demands in all cases where a distributor seeks a reduction in third-year contract demand, including all cases where Northern's Peoples Division desires a reduction in third-year contract demand and all cases where a distributor may be failing to use third-year contract demands within billing groups where third-year volumes could be shifted to other communities whose market requirements have increased beyond the original third-year certificated contract demands.

(C) North Central's petition to amend the order accompanying Opinion No. 324 is hereby denied.

(D) All other provisions of the order accompanying Opinion No. 324, as heretofore amended, shall remain unchanged.

HARRY W. FRAZEE,
Presiding Examiner.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

NATURAL GAS COMPANIES—EMERGENCY PLANNING—ANNUAL REPORTS OF SYSTEM FLOW DIAGRAMS, DOCKET NO. R-257

ORDER GRANTING RECONSIDERATION OF ORDER NO. 303 AND POSTPONING DATE FOR FILING INITIAL REPORT

(Issued October 14, 1965)*

Subsequent to the issuance on August 19, 1965, of Order No. 303, 30 F.R. 11101, which prescribed annual reports to be filed by certain natural gas pipeline

*Published in the Federal Register on October 21, 1965 (30 F.R. 13359).

companies, a joint application was filed on behalf of the Columbia Companies listed in the margin.[1] The application petitioned for rehearing, reconsideration, stay and abrogation in toto of Order No. 303, 34 FPC 536.

Although most of the points raised in the applications are substantially the same as those heretofore presented to the Commission in written submittals made pursuant to the notice of proposed rule-making issued herein on February 12, 1964 (29 F.R. 2912) and the amended notice issued January 7, 1965 (30 F.R. 447), we believe that a reexamination of the new § 260.8 would be in the public interest. Accordingly, we are granting reconsideration of our order for that purpose.

In addition, it is now apparent that it will be impossible to complete the steps we have taken in compliance with the Federal Reports Act of 1942 (5 U.S.C. 139c) in time to enable adherence to the November 15 filing date for 1964 required by ordering paragraph (A)(c) of Order No. 303. We are, therefore, extending the time for such filing to all the companies required to make the report.

The Commission finds:

It is appropriate and in the public interest in administering the Natural Gas Act that the aforesaid application of Columbia Companies, dated September 17, 1965, insofar as it requests reconsideration of Order No. 303, be granted; that the application for rehearing and abrogation of the order be denied; and that the November 15, 1965 filing date for 1964 data be extended, as hereinafter ordered.

The Commission orders:

(A) The aforesaid application of the Columbia Companies for reconsideration is granted.

(B) Ordering clause (A)(c) of Order No. 303 is amended to read as follows:

(c) Flow diagrams depicting 1964 operations shall be filed by a date to be fixed hereafter.

(C) The application of Columbia Companies is, in all other respects, *denied*.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

CHATHAM STRAIT FISH COMPANY, PROJECT NO. 2013

ORDER ACCEPTING SURRENDER OF LICENSE (MINOR)

(Issued October 15, 1965)

On March 12, 1965, Washington Fish & Oyster Company (Applicant), as successor in title to the project facilities under license to Chatham Strait Fish Company as minor Project No. 2013, filed an application for surrender of the license for the project, located on an unnamed tributary of Crab Bay and affecting lands of the United States within the Chugach National Forest on Evans Island, Alaska. The energy generated by the project is used for lighting Applicant's cannery.

In accordance with a written understanding between the Forest Service and the Commission, dated November 28, 1962, and pursuant to application therefor, the Forest Service has issued a Special Use Permit to Applicant for the continued occupancy by the project of the National Forest lands involved. The permit was made effective as of January 1, 1965.

---

[1] Atlantic Seaboard Corporation, Kentucky Gas Transmission Corporation, United Fuel Gas Company, The Ohio Fuel Gas Company, The Manufacturers Light and Heat Company, Home Gas Company and Columbia Gulf Transmission Company.

Annual charges under the license for the project, in the amount of $10.00, have been paid through December 31, 1962. Public notice of the application for surrender has been given. No protests or petitions to intervene have been received.

The Commission finds:

Acceptance of surrender of the license for the project is appropriate, as hereinafter provided.

The Commission orders:

Surrender of the license for Project No. 2013 is hereby accepted, effective as of December 31, 1964, subject to the payment of annual charges through said date in the amount of $20.00.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

IDAHO POWER COMPANY, DOCKET NO. E-7239

ORDER AUTHORIZING ISSUANCE OF PROMISSORY NOTES

(Issued October 15, 1965)

Idaho Power Company (Applicant) filed an application with the Federal Power Commission on August 18, 1965, seeking an order pursuant to Section 204 of the Federal Power Act authorizing it to issue short-term Promissory Notes in the aggregate amount of not more than $40,000,000 outstanding at any one time. Applicant is incorporated under the laws of the State of Maine and qualified to do business in the States of Idaho, Oregon and Nevada, with its principal place of business at Boise, Idaho, and is engaged in the generation, purchase, sale at wholesale, transmission and distribution of electric energy in its service area in the three states.

According to the application, Applicant proposes to make short-term borrowings from commercial banks and have unsecured notes up to an aggregate of $40,000,000 outstanding at any one time. The notes are to be issued from time to time before or on December 31, 1966; and each new or renewal note is expected to have a maturity of six months from issue, with no maturities of over one year.

Applicant states that the purpose for which the proposed short-term bank borrowings will be made and promissory notes issued is to obtain temporary interim capital for the Applicant's construction program for the last half of 1965 and for 1966. The total cost of this program is estimated at $61.6 million. The principal items in this program include $37.3 million for three generating units at Hells Canyon, $10.4 million for distribution plant facilities, $3.2 million for construction of the 106 mile Boise Bench-Midpoint 230 kv line and $2.1 million for other transmission lines and substations.

During 1966, Applicant expects to undertake permanent financing arrangements including the issue and sale of additional fixed capital securities, including equity securities, probably in the spring of said year, however, the kinds and amounts of securities to be issued, as well as the time or times of issuance thereof, have not been and cannot now be determined as this will depend upon market and other conditions which may exist during 1966 and at time of said issue. The net proceeds of any such financing will be applied in partial payment of short-term notes at such time or times outstanding.

Although the Applicant has requested permission to issue notes of up to $40,000,000, it presently estimates that the maximum amount of notes to be

outstanding at any time during the period to December 31, 1966, will not exceed $30,000,000 assuming a permanent financing transaction during 1966. However, should market or other conditions cause a delay in or postponement of any contemplated permanent or long-term financing, it may be necessary for the Applicant to issue notes up to the full amount of $40,000,000 in order to avoid delay and additional cost in the construction of essential service facilities, including construction pursuant to the Commission's license for Project No. 1971.

Written notice of the application has been given to the Idaho Public Utilities Commission, the Nevada Public Service Commission, and the Oregon Public Utility Commissioner and to the Governor of each of those States. Notice has also been given by publication in the Federal Register on September 1, 1965 (30 F.R. 6603), stating that any person desiring to be heard or to make any protest with reference to the application, shall file petitions or protests on or before September 15, 1965, with the Federal Power Commission, Washington, D.C. 20426. No protest, petition or request to be heard in opposition to the granting of the application has been received. On September 1, 1965, the Idaho Public Utilities Commission issued an order authorizing this proposed issuance of short-term notes.

The Commission finds:

(1) Applicant, a corporation, is a public utility within the meaning of Section 204 of the Federal Power Act, subject to the jurisdiction of the Commission as heretofore described and set forth in the Commission's order issued November 7, 1957, *Idaho Power Company*, Docket No. E–6781 (18 FPC 603).

(2) The proposed issuance of Promissory Notes in the aggregate principal amount of $40,000,000, all as described above, will constitute an issuance of securities within the purview of Section 204 of the Act.

(3) The proposed issuance of Promissory Notes in the aggregate principal amount of $40,000,000, all as described above, will be in excess of 5% of the par value of the other securities of Applicant, and, therefore, will not be exempt by virtue of Section 204(e) from the requirements of Section 204(a) of the Act.

(4) Applicant is not organized and operating in a State, under the laws of which the issue here involved is regulated by a State Commission within the meaning of Section 204(f) of the Act, and the proposed issuance is, therefore, not exempt by virtue of that Section from the requirements of Section 204 of the Act.

(5) The proposed issuance of Promissory Notes will be exempt from the competitive bidding requirements of Section 34.1a of the Commission's Regulations under the Federal Power Act by reason of paragraph 34.1a(a)(2).

(6) The proposed issuance of securities, as hereinafter authorized, will be for a lawful object, within the corporate purposes of Applicant and compatible with the public interest, which is appropriate for and consistent with the proper performance of service by Applicant as a public utility, and which will not impair its ability to perform that service, and is reasonably necessary and appropriate for such purposes.

(7) The period of public notice given in this matter is sufficient.

The Commission orders:

(A) The proposed issuance of Promissory Notes in the aggregate principal amount of $40,000,000 outstanding at any one time, whether an original issue or a renewal note, upon the terms and conditions and confined to the purposes set forth in the application, all as described above, is hereby authorized, subject to the provisions of this order.

(B) This authorization is expressly conditioned upon the issuance of all notes to be issued being not later than December 31, 1966 and the final authority of said notes being not later than December 31, 1967.

(C) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuation, estimates or determinations of cost or any other matter whatsoever now pending or which may come before this Commission.

(D) Nothing in this order shall be construed to imply any guarantee or obligation on the part of the United States in respect to any security to which this order relates.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

INTERNATIONAL PAPER COMPANY, PROJECT NO. 2375

ORDER WAIVING PENALTY FOR DELINQUENCY IN PAYMENT OF ANNUAL CHARGES

(Issued October 15, 1965)

On July 1, 1965, a statement of annual charges for the period October 1, 1950 through December 31, 1964 under the license for Project No. 2375 was mailed to International Paper Company, licensee for the project. It was noted on the statement that the charges should be paid "within 45 days of rendition of a bill therefor" pursuant to Section 11.31 of the Commission's Regulations under the Federal Power Act. This was the first statement rendered for charges due under the license for the project.

When payment was not received within the time prescribed, a penalty attached for such delinquency under the Commission's Regulations.

By letter dated August 31, 1965, the licensee advises that the delay in payment was due to the facts that (1) absence of key personnel who were being reassigned from Project No. 2375 to the newly opened Androscoggin Mill and (2) an accounting error.

The Commission finds:

It will not be inconsistent with the public interest to waive the penalty which attached by reason of the licensee's delay in payment of the annual charges under the license for Project No. 2375.

The Commission orders:

The aforementioned penalty is hereby waived.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

NORTHERN NATURAL GAS COMPANY, DOCKET NO. RP66-3

ORDER APPROVING PROPOSAL PROVIDING FOR RATE REDUCTIONS AND REFUNDS AND ACCEPTING REVISED TARIFF SHEETS FOR FILING

(Issued October 15, 1965)

Northern Natural Gas Company (Northern) on August 5, 1965, tendered for filing certain revised sheets to its FPC Gas Tariff, First Revised Volume No. 1,[1] to become effective June 27, 1965, and a "Statement of Intention" (Statement)

[1] Ninth Revised Sheet Nos. 18h, 18i, 18j, 18–1.1, 18–1.2, 18p, and 18q; Tenth Revised Sheet Nos. 18d and 18e; Eleventh Revised Sheet No. 18c; Twelfth Revised Sheet Nos. 18m and 18n; Fourteenth Revised Sheet Nos. 4, 5, 6, 9, 10, 11, 14, 15 and 16.

with regard to its rates and charges for the future. The proposed revised tariff sheets would reduce the currently effective demand charge in all of Northern's jurisdictional rate schedules by 17.4 cents per Mcf, resulting in an annual reduction in revenues of approximately $3,500,000, based on contract demands to be effective as of October 27, 1965. Northern will make refunds to reflect this rate reduction for the period from June 27, 1965, to the month following Commission approval of the rate reduction.

Northern will also refund to its jurisdictional customers approximately $670,000, to reflect the reduction in the federal income tax rate from 50 percent to 48 percent for the period January 1, 1965, to June 27, 1965. This refund will be allocated among Northern's jurisdictional customers on the basis of the proportionate share of each such customer in Northern's total jurisdictional contract demand billing units during the period of six months ending June 27, 1965. This refund is to be made without interest within thirty days after the Commission accepts the settlement proposal.

This filing is the result of numerous conferences between Northern and the Commission Staff concerning the level of Northern's jurisdictional rates. The remaining provisions contained in the Statement may be summarized as follows:

(1) The refund and rate reduction obligations imposed upon Northern in Section IV of the rate settlement in Docket No. G–19040, *et al.* approved by order issued December 21, 1961, 26 FPC 901, shall remain in full force and effect and nothing in the Statement shall be construed to modify those obligations.

(2) The obligations imposed upon Northern in the order issued January 2, 1964, 31 FPC 7, approving the rate settlement in Docket No. RP64–15, shall terminate as of the date the rates proposed herein become effective.

(3) Northern will make refunds to its jurisdictional customers of the jurisdictional portion of refunds and interest received from producers as a result of Northern's having purchased gas at rates made effective subject to refund after December 27, 1961, to the extent attributable to purchases during the period from December 27, 1961 to the date the Statement ceases to be effective.

(4) Northern will flow through the jurisdictional portion of refunds received after September 1, 1965, as a result of proceedings under Section 5(a) of the Natural Gas Act, to the extent those refunds result in a reduction of purchased gas costs for the relevant period below 14.2 cents per Mcf at 14.73 pounds.

(5) If Northern's annualized weighted average cost of purchased gas is decreased, as a result of reductions in producer rates, below 14.2 cents per Mcf at 14.73 pounds or below the cost determined as of Northern's most recent reduction under Section VI of the Statement, whichever is less, Northern will reduce its jurisdictional demand charges to reflect such reductions, if the cumulative effect of such reductions equals or exceeds two cents per Mcf on the annual jurisdictional billing demand units.

(6) If Commission Opinion Nos. 417 and 417–A, 31 FPC 208, 928 *Alabama-Tennessee Natural Gas Company* (*Alabama-Tennessee*) are finally affirmed, the Statement calls for the following procedure:

(a) Within thirty (30) days after judicial review of *Alabama-Tennessee* is concluded, or after any order on remand becomes final, Northern and Staff will initiate conferences to determine the extent to which Northern must make refunds or rate reductions to reflect that decision.

(b) If these conferences have not been concluded and agreement reached within thirty (30) days after they commenced, Northern shall petition promptly for a Declaratory Order by the Commission determining the applicability to Northern of the principles upheld in *Alabama-Tennessee* and the propriety of the Commission's fixing Northern's rates for the future on the basis of liberalized deprecia-

tion, if Northern were to use straight-line depreciation for tax purposes. Northern agrees to assume the burden of proof on issues raised by its petition for a Declaratory Order.

(c) Any refunds and rate reductions required shall be made from and after December 27, 1965, except that, if the effect of the review of *Alabama-Tennessee* or any orders therein is to delay the effectiveness of Opinion Nos. 417 and 417–A, the commencement date for refunds and rate reductions shall be the effective date of the Commission order issued in *Alabama-Tennessee* after judicial review is completed or the date the Commission's Declaratory Order described above is issued, whichever is earlier.

(d) If a rate reduction is required by the Declaratory Order, Northern may submit studies to the Commission showing that a rate reduction would be conducive to a rate increase filing. To the extent the Commission agrees with Northern, the rate reduction obligation will be modified, but the refund obligation will not be affected.

(e) Any refunds and rate reductions required to reflect the principles of *Alabama-Tennessee* shall be based on the rate effect of the excess of liberalized depreciation over straight line depreciation for the twelve months ending December 31, 1965, and on the balance in Account No. 282 as of December 31, 1965.

(f) If it is decided in the Declaratory Order proceeding, including judicial review, that Northern's rates will not be computed on the basis of liberalized depreciation if it uses straight line depreciation for tax purposes, and if Northern advises the Commission of its election to so use straight line depreciation, Northern will have no obligation to reduce its rates, but Northern will be obligated to make refunds for the relevant period prior to December 27 of the year preceding the calendar year in which Northern returns to the use of straight line depreciation for tax purposes.

(g) Northern reserves the right to return to straight line depreciation for tax purposes for the calendar year 1966, and, if it elects to do so, a decision in the Declaratory Order proceeding setting Northern's rates on the basis of liberalized depreciation notwithstanding that election will operate only prospectively, except for the issue of deducting the amount in Account No. 282 from the rate base.

(7) Northern will not file any rate increase to become effective prior to December 27, 1966, after statutory suspension.

(8) The Statement will terminate on the date a rate increase filed by Northern under Section 4 of the Natural Gas Act becomes effective, either with or without suspension, or on the date new rates are made effective pursuant to proceedings instituted by the Commission against Northern.

Northern requests that the Commission waive the thirty-day notice period and other rules necessary to allow the proposed revised tariff sheets to become effective as of June 27, 1965.

No objections to the proposed rate reduction and Statement have been filed.

The Commission finds:

(1) The settlement of Northern's rates and charges as provided in the "Statement of Intention" is reasonable, proper, and in the public interest in carrying out the provisions of the Natural Gas Act, and that Statement should be approved and made effective subject to the terms and conditions hereinafter provided and ordered.

(2) Good cause exists for the Commission to accept for filing the revised tariff sheets tendered by Northern on August 5, 1965, and to waive the notice requirements of the Regulations under the Natural Gas Act in order to allow those tariff sheets to become effective as hereinafter ordered.

The Commission orders:

(A) The settlement of Northern's rates and charges, as proposed in Northern's "Statement of Intention" is approved and made effective, subject to the terms and conditions hereinafter specified.

(B) The revised tariff sheets tendered by Northern on August 5, 1965, are accepted for filing, and the thirty-day notice requirements of Section 154.22 of the Regulations are waived to permit such revised tariff sheets to take effect as of June 27, 1965.

(C) Northern shall comply with each of the provisions of the "Statement of Intention."

(D) Within fifteen days after making refunds in accordance with the "Statement of Intention", Northern shall report to the Commission, in writing and under oath, the amount of the refund to each customer, showing separately the amount of principal and interest so paid, together with a computation showing the manner in which such refund was determined, shall serve a copy of this report upon each customer, and shall submit to the Commission a copy of the release signed by such customer acknowledging receipt of the amount refunded.

(E) This order is without prejudice to any findings or orders which have been or may hereafter be made by the Commission, and is without prejudice to any claims or contentions which may be made by the Commission, its staff, Northern, or any affected party herein in any proceeding now pending, or hereafter instituted by, or against, Northern, or any other company or person.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

PACIFIC POWER & LIGHT COMPANY, DOCKET NO. E-7123

SUPPLEMENTAL ORDER EXTENDING EXPIRATION DATE OF COMMISSION'S ORDER

(Issued October 15, 1965)

By order issued October 14, 1963, 30 FPC 1006, in the above docket, the Commission authorized Pacific Power & Light Company (Pacific) to assume liability as guarantor of promissory notes or other evidences of indebtedness or obligations issued by persons to commercial banks for the following purposes:

(1) To finance extensions to Pacific's facilities to serve new customers where circumstances are such that the new customer is required to make advance payments to Pacific as a condition to obtain service. (No note is to exceed $5,000 or extend for a period in excess of 10 years.)

(2) To finance payments for wiring modernization and improvement, electric equipment, and appliances by residential consumers. (No note is to exceed $1,200 or extend for a period in excess of five years.)

(3) To finance payments for wiring modernization and improvement, electric equipment, and appliances by commercial consumers. (No note is to exceed $2,500 or extend for a period in excess of five years.)

The order states that the aggregate principal outstanding balance of all such obligations for purposes numbered (1) above to which Pacific, at any one time shall assume liability, shall not exceed $2,000,000. The aggregate principal balances of all obligations for purposes numbered (2) and (3) above with respect to which Pacific, at any one time may assume liability, may not exceed $1,000,000. New liabilities may be assumed only during the period of two years from the date of the order. The order also contains a provision that Pacific shall file within 30 days from the first anniversary date of the order a report of its ex-

perience under the authorization, setting forth, among other matters, the number of loans it has been requested to endorse as guarantor, the geographic distribution of such requests, the number of such requests it has rejected, together with the reasons for such rejection. Pacific has filed this requested information.

Pacific, on August 23, 1965, filed an amendment to its original application requesting the Commission to extend the authorization to continue to assume the liability beyond October 14, 1965, the expiration date of the Commission's order issued October 14, 1963; and to modify the Commission's order by requiring the report of Applicant's transactions be filed with the Commission after the close of each calendar year instead of on the anniversary date of the order as now provided.

Pacific reports the result of the program cumulative to June 30, 1965, as follows: Total cumulative amount of notes guaranteed to commercial banks was $275,287.51. During this period Pacific has purchased from banks seven notes totalling $1,936.20. Regarding the delinquent notes purchased, Pacific reports $85.97 collected, $95.72 written off and the collection process is active with the balance of $1,754.51.

The Commission orders:

(A) The authorization granted in the Commission's order issued October 14, 1963, for a period of two years terminating October 14, 1965, is hereby extended for a period of five years terminating October 14, 1970.

(B) The Commission's order is further modified by requiring that the report specified in Paragraph (D) shall be filed on or before February 15 after the close of the calendar year beginning with the calendar year 1965.

(C) All other terms and conditions as set forth in the aforesaid Commission order issued October 14, 1963, shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

EDWARD O. BOSHELL, DOCKET NO. ID–1107

ORDER TO SHOW CAUSE

(Issued October 18, 1965)

By order issued April 29, 1952, 11 FPC 956, Edward O. Boshell (Applicant) was authorized, pursuant to Section 305(b) of the Federal Power Act to hold the following positions:

Director Chairman of the Executive Committee	Duquesne Light Company.
Director	Westinghouse Electric Corporation.

In the order, the Commission reserved the right to require Applicant to make further showing that neither public nor private interests would be adversely affected by continuing to hold the above positions.

At that time Applicant was President and Chairman of The Board of Standard Gas and Electric Company, the parent holding company of Duquesne Light Company. In the order the Commission commented on this situation as follows:

> As a practical matter, furthermore, Mr. Boshell is now Director and Chairman of the Executive and Finance Committee of Duquesne by virtue of his

relationship to Standard Gas and Electric, a holding company solely within the jurisdiction of the Securities and Exchange Commission and presently in the process of dissolution under the aegis of that Commission. As such he is admittedly in a position to dominate the Duquesne board, either directly or through nominations, and will continue in that position, regardless of our action herein, at least until the process of dissolution under Securities and Exchange Commission supervision has been concluded.

Since then, Standard Gas and Electric Company has been liquidated and the situation referred to in the Commission's order of exercising control of Duquesne through the holding company no longer exists.

Westinghouse Electric Company is a primary supplier of electrical equipment to Duquesne and the holding of such interlocking positions as referred to above, in these two companies would appear to create a conflict of interest which would or could be adverse to public or private interests. Under similar circumstances the Commission has denied authorization to hold such interlocking positions. (See *Leland F. Sillin, Jr.*, Docket No. ID–1473, order of May 13, 1965, 33 FPC 1006).

In view of the foregoing, it is necessary and appropriate for the purposes of administering the Federal Power Act that Applicant show cause, if any there be, why the Commission should not terminate the present authority to hold the interlocking positions referred to above.

The Commission orders:

Edward O. Boshell shall show cause, if any there be, within 30 days from the issuance of this order, why the Commission should not find and determine that the continued authorization to hold the following interlocking positions:

Director Chairman of the Executive Committee	Duquesne Light Company.
Director	Westinghouse Electric Corporation.

would be adverse to public or private interests and should be terminated.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

GAS GATHERING CORPORATION, G–20118 AND RP65–11; HUMBLE OIL & REFINING COMPANY, G–9287, ET AL.; SOCONY MOBIL OIL COMPANY, INC., G–12201 AND G–17526; THE ATLANTIC REFINING COMPANY, G–17741; TRANSCONTINENTAL GAS PIPE LINE CORPORATION, RP65–31

ORDER AMENDING ORDERS

(Issued October 18, 1965)

On June 10 [unreported] July 12 and August 9, 1965, 34 FPC 30, 441, we issued orders in the above-docketed proceedings in which, *inter alia*, we ordered Transcontinental Gas Pipe Line Corporation (Transco) to retain any monies that might otherwise flow through to The Manufacturers Light and Heat Company by reason of Transco receiving refunds because of our approval of settlement proposals in those orders. In the orders we gave Transco the election to commingle the retained refunds with its general assets and use them for its corporate purposes at an interest rate of 6% per annum to the date on which they are to be paid over to the person ultimately determined to be entitled thereto in a final order

of the Commission. Transco has advised the Commission, in each instance, that it elected so to do.

On September 10, 1965, Transco filed motions asking that each of the orders be amended to provide that the rate of interest on the retained refunds be 4.5% per annum in accordance with Opinion No. 468, Area Rate Proceeding, Docket No. AR61–1, *et al.*, 34 FPC 159, (issued August 5, 1965). Good cause exists to grant Transco's motions.

The Commission orders:

(A) The motions filed by Transco on September 10, 1965, are each granted.

(B) Ordering Paragraph (H) of the order issued June 10, 1965, in Docket No. G–20118, *et al.*, Ordering Paragraph (G) of the order issued July 12, 1965, in Docket No. G–12201, *et al.*, and Ordering Paragraph (C) of the order issued August 9, 1965, in Docket No. G–17741, *et al.*, are each amended so as to provide for an interest rate of 4.5% per annum in lieu of 6% per annum set forth in each of said ordering paragraphs, to the date on which the retained refunds are paid over to the person ultimately determined to be entitled thereto in a final order of the Commission.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

NATURAL GAS PIPELINE COMPANY OF AMERICA.
DOCKET NO. CP66–39

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued October 18, 1965)

On August 2, 1965, Natural Gas Pipeline Company of America (Applicant), filed in Docket No. CP66–39 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain facilities and the sale and delivery of natural gas, all as more fully set forth in the application.

Applicant seeks authorization to construct and operate approximately 120 feet of 2-inch lateral, a meter station and other appurtenant facilities in LaSalle County, Illinois, for the sale and delivery of natural gas to Northern Illinois Gas Company (Northern) for resale to the Wallace Township School which is located north of Ottawa, LaSalle County, Illinois.

The required state and local authorizations have been obtained. Total estimated cost of Natural's proposed facilities is $3,900 which will be financed with funds on hand. Gas requirements are estimated as follows:

Year of service	1st	2d	3d
Peak day—Mcf	40	40	40
Annual—Mcf	1,600	1,600	1,600

Northern, an existing customer of Applicant, proposes to serve the school from quantities of natural gas which Applicant has heretofore been authorized to sell and deliver to Northern. Northern's presently effective contract quantity is 564,190 Mcf under Applicant's Schedule CD–1 and 308,035 Mcf maximum daily quantity of storage withdrawal service under Applicant's Rate Schedule S–1. Applicant does not propose any increase in the Daily Contract Quantity or the Maximum Daily Quantity of storage withdrawal.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on October 14, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought, and upon consideration of the record,

The Commission finds:

(1) Applicant, Natural Gas Pipeline Company of America, a Delaware corporation having its principal place of business in Chicago, Illinois, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of November 7, 1958, in Docket No. G-9966 (20 FPC 694).

(2) The proposed construction and operation of facilities and the sale and delivery of natural gas by Applicant as hereinbefore described, and as more fully described in the application, in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid proposed construction and operation of facilities and the sale and delivery of natural gas are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to Applicant, Natural Gas Pipeline Company of America, authorizing the construction and operation of facilities and the sale and delivery of natural gas to Northern Illinois Gas Company as hereinbefore described and as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities authorized shall be completed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the aforesaid Regulations within 3 months of the date on which this order issues.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

UNION ELECTRIC COMPANY, PROJECT NO. 2277

ORDER GRANTING REHEARING FOR FURTHER CONSIDERATION

(Issued October 18, 1965)

On September 27, 1965, the Union Electric Company (Applicant) filed an application for rehearing of the order dated August 26, 1965, 34 FPC 598, issuing

a license under Section 4(e) of the Federal Power Act for Project No. 2277, known as the Taum Sauk project, located on the East Fork of the Black River at its confluence with Taum Sauk Creek in Reynolds, Iron, Washington and St. Francois Counties, Missouri in the vicinity of Lesterville, Missouri.

In addition to alleging that the license order contains certain errors in the description of the project, Applicant contends that:

(a) *Article 31*, insofar as it requires Applicant to make water releases from the lower pool at such rate or in such volume as the Commission may prescribe, is unnecessary and undesirable because other license provisions deal adequately with this matter.

(b) *Article 32*, insofar as it requires that the natural inflow into the lower pool be measured, is impractical and unnecessary since Applicant's present practice accomplishes the apparent objective of this requirement.

(c) *Article 34*, insofar as it requires that seepage flows be measured daily is unworkable, and Applicant's present practice provides all necessary information.

It appears appropriate to allow time in which the Commission staff may make further investigation of the engineering aspects involved and confer with representatives of the Company in an effort to achieve a resolution of the technical problems.

The Commission finds:

It is appropriate and in the public interest in administering Part I of the Federal Power Act (16 USC 791–823) that the aforesaid application of the Union Electric Company for rehearing of the order, dated August 26, 1965, issuing a license for Project No. 2277 be granted for the purpose of further consideration.

The Commission orders:

The aforesaid application of the Union Electric Company for rehearing is hereby granted for the purposes of further consideration of the matters presented therein.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

UNITED FUEL GAS COMPANY, DOCKET NO. CP65–207

ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued October 18, 1965)

On August 23, 1965, United Fuel Gas Company (Applicant) filed in Docket No. CP65–207 an application to amend the order of the Commission issued in said docket on March 8, 1965, 33 FPC 424, authorizing the Applicant to (1) construct and operate measuring and regulating facilities on its 10-inch transmission line in Boyd County, Kentucky and (2) to sell natural gas to Columbia Gas of Kentucky, Inc. (Columbia), an affiliated wholesale customer of Applicant, for resale to The International Nickel Company, Inc. (International Nickel). Applicant seeks an amendment of said order so as to delete from Ordering Paragraph (A) thereof authorization to construct and operate facilities, all as more fully set forth in the said application to amend.

Applicant states that upon finalization of Columbia's construction program to connect its lateral pipeline to Applicant's existing 10-inch transmission line, an agreement was consummated between Columbia and International Nickel, whereby the latter provided a site on its premises for a measuring and regulating facility to meter the gas from Columbia to International Nickel. In view of this agreement the facilities proposed by Applicant became unnecessary.

Due notice of the filing of the application to amend and opportunity for hearing thereon have been given by publication in the Federal Register on September 4, 1965 (30 F.R. 11359). No protest, petition to intervene or notice of intervention has been filed in the proceeding concerning this amendment.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order issued March 8, 1965, in Docket No. CP65–207 be amended as hereinafter ordered.

The Commission orders:

(A) The Commission's said order issued in Docket No. CP65–207 is amended so as to delete from Ordering Paragraph (A) thereof authorization to construct and operate facilities.

(B) In all other respects said order shall remain in full force and effect.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

UNITED GAS PIPE LINE COMPANY, DOCKET NO. CP66–66

FINDINGS AND ORDER AFTER STATUTORY HEARING PERMITTING AND APPROVING ABANDONMENT

(Issued October 18, 1965)

On August 30, 1965, United Gas Pipe Line Company (Applicant) filed in Docket No. CP66–66 an application pursuant to Section 7(b) of the Natural Gas Act for permission and approval to abandon certain natural gas facilities originally constructed to serve Continental Can Company, Inc., in Jefferson County, Texas (Docket No. CP63–50, 29 FPC 235), all as more fully set forth in the application.

Applicant seeks permission and approval to abandon facilities consisting of a positive meter station located at a point on the 2-inch line serving the U.S. Steel Corporation in Jefferson County, Texas. By letter agreement dated July 13, 1965, Applicant and Continental Can Company agreed to a cancellation of the contract under which deliveries of gas were made for the reason that the plant has been shut down and gas is no longer needed.

After due notice, no petition to intervene, notice of intervention, or protest to the granting of the application has been filed.

At a hearing held on October 14, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought, and upon consideration of the record,

The Commission finds:

(1) Applicant, United Gas Pipe Line Company, a Delaware corporation having its principal place of business in Shreveport, Louisiana, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order issued November 10, 1943, in Docket No. G–232 (3 FPC 863).

(2) The facilities proposed to be abandoned, as hereinbefore described and as more fully described in the application herein, are used in the transportation

of natural gas in interstate commerce subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(3) The proposed abandonment of the aforesaid facilities and the service rendered thereby is permitted by the public convenience and necessity and approval thereof should be granted as hereinafter ordered.

The Commission orders:

(A) Permission for and approval of the abandonment of the facilities hereinbefore described, as more fully described in the application in this proceeding, and the service rendered are granted to Applicant, United Gas Pipe Line Company.

(B) Applicant shall advise the Commission of the date of abandonment of the facilities as authorized in paragraph (A) above within 10 days of such abandonment.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

TRANSCONTINENTAL GAS PIPE LINE CORPORATION, CP64-270; SOUTHERN NATURAL GAS COMPANY, CP64-259, CP64-314; EAST TENNESSEE NATURAL GAS COMPANY, CP65-66; TENNESSEE GAS TRANSMISSION COMPANY, CP64-165; CITY OF BUFORD, GEORGIA, CP65-11, CP65-20; CITY OF SUGAR HILL, GEORGIA, CP65-10, CP65-19; CITY OF AUSTELL, GEORGIA, CP65-74

ORDER ISSUING TEMPORARY CERTIFICATE TO OPERATE FACILITIES

(Issued October 19, 1965)

By our orders of April 13, 1965, 33 FPC 729 and August 30, 1965, 34 FPC 655, Southern Natural Gas Company (Southern) was granted temporary certificates to construct specified facilities for which it is seeking permanent certificate in Docket No. CP64-314. The facilities provide an increase of 57,824 Mcf in Southern's daily delivery capacity, part of which is allocated for additional firm service to Atlanta Gas Light Company (Atlanta) and the Water, Light and Sinking Fund Commission of Dalton, (Dalton) existing customers of Southern in the State of Georgia. On September 2, 1965, Southern filed a request for temporary certificate to operate the facilities installed under the two previous temporary certificates.

Answers to the request for temporary certificate to operate the facilities were filed by East Tennessee Natural Gas Company and Transcontinental Gas Pipe Line Corporation (Transco). Neither opposes granting the request. Transco, the only applicant competing for increased service to Dalton and Atlanta, requests that certain conditions be imposed in the event that Southern subsequently fails to receive permanent authorization for rendering said service. Southern has acquiesced and we shall so condition the instant authorization. Should the Commission deny permanent certificates for the facilities authorized to be constructed under both temporary certificates, cost associated with the construction of said facilities shall not be included in Southern's rate base.

The Commission orders:

(A) The application of Southern Natural Gas Company in Docket No. CP64-314 for temporary certificate to operate and use the facilities heretofore authorized to be constructed under two previous temporary certificates is granted as hereinafter conditioned.

(B) The grant of the instant temporary certificate is without prejudice to such final determination of the applications in the proceeding in Transcontinental Gas Pipe Line Corporation, *et al.*, Docket No. CP64-270, *et al.*, as the record may require.

(C) The temporary certificate issued herein and the rights granted hereunder are conditioned upon Southern's compliance with all Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraph (c)(3) of Section 157.20 of such Regulations. Should the Commission deny a permanent certificate to Southern in Docket No. CP64-314, the contract demands of Atlanta and Dalton at the Rome, Georgia delivery point shall be decreased by 2,342 Mcfd and 3,050 Mcfd, respectively. Furthermore, the subject facilities, under the instant temporary certificate, shall not be utilized to deliver to Atlanta increased contract demand volumes for the "Atlanta area" in excess of those volumes set forth on page 7 of Exhibit 1 in Southern's application for a temporary certificate in Docket No. CP64-314, filed February 23, 1965.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

VANCEBURG ELECTRIC LIGHT, HEAT AND POWER SYSTEM v. KENTUCKY POWER COMPANY AND AMERICAN ELECTRIC POWER COMPANY, DOCKET NO. E-7184

ORDER ACCEPTING RATE SCHEDULES FOR FILING EFFECTING RATE REDUCTIONS, GRANTING WAIVER OF NOTICE REQUIREMENTS AND TERMINATING PROCEEDING

(Issued October 19, 1965)

Complainant, Vanceburg Electric Light, Heat and Power System (Vanceburg), Vanceburg, Kentucky, and respondent, Kentucky Power Company (Kentucky Power), propose a settlement of issues in this proceeding on the basis of a $19,000 annual rate reduction to the City all as reflected in an offer of settlement which was submitted to the presiding examiner on September 20, 1965, and subsequently certified to the Commission.

Fleming-Mason Rural Electric Cooperative Corporation (Fleming-Mason), sole intervenor in the proceeding, states that it has no objection to termination of the proceeding on the basis of the settlement proposal. Commission staff and the presiding examiner recommend acceptance of the settlement proposal.

This order terminates the above-entitled proceeding, as requested, resulting in the above reduction to Vanceburg and an $8,300 annual rate reduction by Kentucky Power to the City of Olive Hill, Kentucky (Olive Hill). Both cities are all requirements electric customers of Company.

Vanceburg initiated this matter upon complaint filed October 1, 1964, seeking a rate reduction in respondent's wholesale rates and charges to the City, or, in the alternative, substitute wholesale electric service from Fleming-Mason. Substantive and jurisdictional questions raised in the answer of Kentucky Power were set for hearing by order of the Commission issued March 4, 1965, reconsideration denied March 29, 1965, 33 FPC 406, 654. In addition to rate level and service questions as raised in the complaint and answer, the Commission ordered an investigation and hearing as to its jurisdiction over respondent's other wholesale sales or services and the lawfulness of respondent's rates and charges therefor. In addition to Vanceburg and Olive Hill, Kentucky Power undertakes to furnish wholesale and wheeling services pursuant to an interconnection and coordination arrangement with East Kentucky Rural Electric

Cooperative Corporation, a generating and transmission cooperative with its principal place of business at Winchester, Kentucky (EKRECC).[1]

Under the settlement proposal, Kentucky Power proffers rate schedules for filing with the Commission for all three customers, subject to Company's reservation of the right to contest Commission jurisdiction thereover.

Hearings were commenced before a presiding examiner of the Commission on April 15, 1965. To date, prepared testimony of witnesses for Vanceburg and Fleming-Mason[2] has been served and cost of service data have been exchanged informally among the parties and staff for settlement purposes. Pending several settlement conferences, further formal hearings were delayed by agreement of all parties and the presiding examiner.

As indicated above, under the terms of the settlement proposal, Kentucky Power would reduce its rates to Vanceburg by 23% ($19,000) and to Olive Hill by 13% ($8,300) based upon 1964 data.[3] Both rate reductions would be effective August 1, 1965. Additionally, Vanceburg's present 20-year electric service contract with Kentucky Power (expiring July 16, 1976) would be modified to permit termination by either party upon three years written notice given at any time after August 1, 1967. We find such revision acceptable for settlement purposes.

As reported by the presiding examiner, the settlement proposal follows numerous meetings between the parties and Commission staff, in the course of which cost of service data of staff and respondent were exchanged and discussed. In the course of these negotiations, substantial differences developed on matters of cost classification, allocations procedures and items of allowable cost with the result that the settlement proposal presents specific rates and charges for service to Vanceburg and Olive Hill rather than any agreed upon costs of service to the two Cities. The demand and energy portions of those rates are as follows:

Vanceburg

Primary Portion: For each kw of monthly billing demand as determined below ---------- $2.60

The Customer shall be allowed 250 kw for each kw of monthly billing demand billed hereunder.

Secondary Portion: For energy in excess of 250 kwh per kw of monthly billing demand---------- $.00512 per kwh

Reactive Demand Charge: For each kvar of lagging reactive demand in excess of 50% of the kw of monthly billing demand---------- $.25 per kvar[4]

Olive Hill

Primary Portion: For each kw of monthly billing demand as determined below---------- $2.85

The Customer shall be allowed 250 kw for each kw of monthly billing demand billed hereunder.

Secondary Portion: For energy in excess of 250 kwh per kw of monthly billing demand---------- $.00512 per kwh.

Reactive Demand Charge: For each kvar of lagging reactive demand in excess of 50% of the kw of monthly billing demand---------- $.25 per kvar[4]

---

[1] At the time Vanceburg filed its complaint, Kentucky Power also supplied the power and energy requirements of two rural electric distribution cooperatives, Big Sandy Rural Electric Cooperative Corporation and Grayson Rural Electric Cooperative Corporation. Kentucky Power's services to those cooperatives ceased in February, 1965, upon commencement of service from EKRECC.

[2] Neither Olive Hill nor EKRECC sought to intervene in this proceeding.

[3] Olive Hill was given an earlier rate reduction by Kentucky Power in 1964.

[4] Both rates subject to fuel adjustment, minimum charge, billing demand and contract capacity clauses.

The difference in the demand charges to the two Cities represents a $.25 per kw substation discount to Vanceburg, for providing its own substation and transformation facilities. Kentucky Power provides the substations and transformation facilities for service to Olive Hill at 4 kv. Vanceburg takes service at 34.5 kv.

Based upon 1964 conditions the proposed charges to Vanceburg would total $64,521 and those to Olive Hill would amount to $55,633. Kentucky Power's actual charges to Vanceburg amounted to $83,480 during 1964. Charges to Olive Hill reflecting reduced rates effective July 1, 1964, are computed at $63,935 based upon 1964 conditions.

As reported to the Commission, available cost data indicate the lack of need for further cost of service analysis at this time regarding Kentucky Power's services to EKRECC under their interconnection and coordination agreement. That agreement provides for mutual emergency support by the two systems, coordination of maintenance schedules, exchange of economy energy and wheeling services.

Rate questions relative to the two cities will be disposed of through acceptance of the rate schedule as set forth in the proffered settlement proposal. These schedules result in substantial and immediate reductions in charges to both Vanceburg and Olive Hill. The differences between Kentucky Power and staff cost of service data define a perimeter within which cost of service differences may, and do, occur by reason of the numerous judgement factors involved in the rate making process. And, although the parties to this proceeding do not agree upon a compromise cost of service applicable to each City, the dollar effect of the offer of settlement is that of a compromise of the Company's differences with staff cost of service data. So considered, the settlement proposal presents an acceptable resolution of contested issues.

By accepting the proffered rate schedules we do not determine what would be the fair rate of return for Kentucky Power to earn upon its wholesale electric business,[5] nor the basis for disposition of disputed items in the respective cost of service data exchanged by Kentucky Power and staff, as would be done were this proceeding terminated following a complete trial of all issues. Our rate making authority is a continuing process and disposition of this proceeding on the indicated basis in no way limits our ability to re-examine Kentucky Power's wholesale rates and charges at any time hereafter. In disposing of this case upon the basis of the proffered rate schedules and resulting revenues, we take note of the immediate rate relief which will be afforded thereby. Also, we note that the effective date of the proposed schedules will be August 1, 1965.

The Commission finds:

(1) Good cause has been shown that the 30-day notice period provided in Section 35.3 of the Commission's Regulations under the Federal Power Act be waived with respect to Kentucky Power's rate schedule filings as referred to above and designated in Appendix A, and that such rate schedules be accepted for filing and allowed to take effect as of August 1, 1965.

(2) It is necessary and appropriate for the purposes of the Federal Power Act that the above-entitled proceeding be terminated in the manner hereinafter ordered.

The Commission orders:

(A) The 30-day notice period provided in Section 35.3 of the Commission's Regulations under the Federal Power Act is waived with respect to the proposed

[5] As for example 6% per annum which Kentucky Power and staff reflected in their respective cost analyses but without agreement as to the propriety thereof; counsel for the various parties and staff reserving arguments supporting greater and lesser amounts.

rate schedules as referred to above and designated in Appendix A hereto and they are accepted for filing and allowed to take effect as of August 1, 1965.

(B) The issuance of this order shall constitute full notice of the filing and publication of the rate schedules in question insofar as their effective dates are concerned.

(C) Acceptance of Kentucky Power's rate schedules as herein provided is without prejudice to any findings or orders which have been or may hereafter be made by this Commission in any proceeding by or against Kentucky Power. Moreover, nothing in this order shall be construed as waiver in any other respect of the requirements of Section 205 of the Federal Power Act or Section 35.11 of the Commission's Regulations under the Federal Power Act; nor shall this order be construed as constituting approval by this Commission of any service, rate, charge, classification, or any rule, regulation, contract, or practice affecting such service or rate provided for in the rate schedules referred to above and designated in Appendix A; nor shall this order be deemed as recognizing any claimed contractual right or obligation affecting or relating to such service or rates.

(D) The above-entitled proceeding, Docket No. E-7184, is terminated.

APPENDIX A

ORGANIZATION OF THE COMMISSION, DOCKET NO. R-287

ORDER NO. 307

AMENDING STATEMENT OF ORGANIZATION

(Issued October 20, 1965)*

Since the issuance of the Commission's revised Statement of Organization (Order No. 245, 27 FPC 887, 27 F.R. 4276, 18 CFR 3.4(e)) its staff has been

*Published in the Federal Register on October 28, 1965 (30 F.R. 13693).

reorganized in numerous respects. Consequently, and in accordance with section 3(a)(1) of the Administrative Procedure Act, we are amending those portions of the organization statement so as to accurately describe our current organization.

The Commission finds:

The amendment to its general rules adopted hereby involves matters of agency organization and procedure which do not require compliance with the notice and effective date provisions of section 4 of the Administrative Procedure Act.

The Commission, acting pursuant to authority granted by section 309 of the Federal Power Act and section 16 of the Natural Gas Act (16 U.S.C. 825h; 15 U.S.C. 717o) and in accordance with section 3 of the Administrative Procedure Act (5 U.S.C. 1002), orders:

(A) Part 3, Subchapter A, Chapter I of Title 18 of the Code of Federal Regulations, is amended by amending the opening sentence and subparagraphs (1), (2), (3), (8), (9), (10) and (12) of § 3.4(e) to read as follows:

"§ 3.4 Organization.

* * * * * * *

(e) *The staff.* The Commission's staff is comprised of the following bureaus and offices:

(1) The Bureau of Natural Gas, responsible for all staff functions pertaining to the natural gas industry, including work related to cost of service studies, cost allocations, rate design, engineering feasibility determinations, service discrimination studies, economic feasibility determinations, gas reserve and deliverability studies, and rate, contract, and tariff analyses and related statistical matters; except responsibility for the legal aspects of the foregoing, the Uniform System of Accounts, original cost and reclassification studies, financial and related statistical matters, rate-of-return studies, and other matters responsibility for which has been assigned to other elements of the staff. The Bureau consists of the Office of the Chief, the Pipeline Division, the Producer Division, the Area Rate Division, and the Analysis and Procedures Division.

(2) The Bureau of Power, responsible for all staff activities pertaining to water resources, hydroelectric power, and the electric power industry; except legal aspects of the foregoing, accounting, financial and related statistical matters, and other matters responsibility for which has been assigned to other elements of the staff. The Chief of the Bureau is also the Chief Engineer of the Commission and is personally responsible for furnishing advice, assistance and counsel on such engineering matters as the Commission may require, and in addition is responsible for the substantive and administrative aspects of the Commission's civil and defense mobilization activities. The Bureau is divided into a headquarters office at Washington, D.C. and five regional offices. The headquarters office consists of the Office of the Chief of the Bureau, a Division of Electric Resources and Requirements, a Division of Licensed Projects, a Division of Rates and Corporate Regulation, and a Division of River Basins. The regional offices at Atlanta, Chicago, Fort Worth, New York, and San Francisco are responsible within their respective geographic areas for Bureau functions which can be done most effectively and efficiently in the field, including field investigations and studies, consultations and inspections.

(3) The Office of Accounting and Finance, responsible for all staff activities pertaining to accounting, financial and related statistical matters including rate-of-return studies and work related to licensed project initial costs, net investment and depreciation and amortization reserve determinations; audit and examina-

tion of accounting procedures of licensees, public utilities and natural gas companies for compliance with prescribed System of Accounts; development and interpretation of Uniform System of Accounts; financial analysis of applications for securities or acquisition of property; and collection, preparation and publication of accounting and financial statistics; except legal aspects of the foregoing, accounting investigations relative to rates and charges for electric power and natural gas, and other matters responsibility for which is assigned to other elements of the staff. The office consists of the Office of the Chief, a Division of Audits, a Division of Systems, and a Division of Finance and Statistics. The Division of Audits includes a field unit with offices in San Francisco, California. The Chief Accountant, in addition to his duties as head of the Office, has personal responsibility for the over-all correlation and adequacy of the accounting and related functions of all bureaus and offices of the staff.

* * * * * * *

(8) The Office of Economics, responsible for advisory and research activities pertaining to economic policy aspects of the Commission's administration of the Federal Power Act and the Natural Gas Act, and for coordinating the Commission's statistical programs. The Office consists of the Office of the Chief, a Division of Econometric Analysis, a Division of Economic Studies, and a Division of Reports and Statistical Analysis.

(9) The Office of Administrative Operations, responsible for providing contracting and procurement, travel and transportation, records, dockets, and files, all types of office services, and data processing machine services.

(10) The Office of Management and Manpower Utilization, responsible for the functions of management analysis, automatic data processing systems analysis and programming services, the conduct of management and manpower utilization surveys, and the suggestion awards aspect of the Commission's incentive awards program.

* * * * * * *

(12) The Office of Program, Budget and Financial Services, responsible for development and implementation of the Commission's financial management system including program, budget and administrative accounting, and provision of payroll services. The Chief of the Office is also the Budget Officer and has the personal responsibility for the over-all correlation and adequacy of the budgeting and related functions of the staff."

[Sec. 16, 52 Stat. 830, 15 U.S.C. 717o; sec. 309, 49 Stat. 858, 16 U.S.C. 825h; Sec. 3, 60 Stat. 238, 5 U.S.C. 1002]

(B) The amendments prescribed herein will be effective upon the issuance of this order.

(C) The Secretary shall cause prompt publication of this order to be made in the Federal Register.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

TEXAS EASTERN TRANSMISSION CORPORATION, DOCKET NO. RP66-12

ORDER EXTENDING TIME FOR FILING

(Issued October 20, 1965)

The Commission on October 4, 1965, issued an order in the above docket, entitled "Order Setting Hearing on Refunds", *supra*, p. 1099. Among other things, that order requires that Texas Eastern Transmission Corporation (Texas Eastern), within 45 days from the date of issuance of the order, file a special report as therein described.

On or about October 14, 1965, "Motion to Stay Proceedings Before the Federal Power Commission in Order to Protect Jurisdiction Over Pending Appeal", was filed by Texas Eastern in the United States Court of Appeals for the Fifth Circuit. That motion urges the Court to stay the requirements of our order issued October 4, 1965, alleging, *inter alia*, that such action by the Court is necessary in order to protect its jurisdiction in the proceedings heretofore filed by Texas Eastern for court review of Commission orders (31 FPC 1180, 32 FPC 687 and 32 FPC 879, Opinion Nos. 428, 428-A and 428-B, Docket No. RP63-1, May 14, 1964, September 2, 1964 and September 30, 1964; 32 FPC 1515, 1559, Docket Nos. RP61-18, RP63-1 and RP65-1, issued December 23, rehearing denied, December 31, 1964; and Docket No. G-9287, *et al.*, issued April 21, 1965, rehearing denied, June 14, 1965 33 FPC 830, 1263). Together with its Motion, Texas Eastern urges that the Court set its request for stay down for oral argument. The Commission's motion to dismiss Nos. 22041 and 22462, CA5, for want of jurisdiction in the Court has been carried with the case without being decided after having been orally argued, and briefing and argument of the cases on the merits has been expedited, so that the jurisdictional question is expected to be argued again along with the merits on December 7, 1965. The Commission also expects that the Court's decision on that motion will be controlling as to No. 22870.

Even if the Commission were in error as to the Court's lack of jurisdiction over those petitions, the Commission deems the petition for stay defective both as to jurisdiction of the Court to entertain it and as to the lawfulness and reasonableness of the Commission's order of October 4, 1965.

However, the Commission feels constrained to recognize that the Court, having in effect deferred ruling on the question of its jurisdiction in Nos. 22041 and 22462 until after the argument of the merits, should not be expected to pass upon the further questions raised by the motion for stay of the October 4 order before the December 7 argument. The Commission feels that, regardless of its views as to the jurisdictional and substantive merits, *vel non*, of the motion for stay, it should postpone the date set for filing the report originally ordered to be filed on November 19, 1965, for a further 46 days, to January 3, 1966, to afford the Court the same opportunity to pass on the questions with respect to the requested stay as the Court deemed appropriate for the motion to dismiss, without the necessity for two hearings that would be substantially duplicated and overlapping.

The Commission orders:

The time within which Texas Eastern shall file the special report required by Paragraph (B) of the order issued October 4, 1965, hereby is enlarged to expire January 3, 1966.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

AREA RATE PROCEEDING, ET AL. (HUGOTON-ANADARKO AREA), DOCKET NO. AR64-1; AREA RATE PROCEEDING, ET AL. (TEXAS GULF COAST AREA), DOCKET NO. AR64-2

ORDER DENYING RECONSIDERATION OF THE DENIAL OF AN APPEAL

(Issued October 21, 1965)

By order issued August 27, 1965, 34 FPC 609, the Commission denied an appeal by a group of parties [1] including a number of Hunt interests (Appellants), from a ruling of the Presiding Examiners, refusing to require a breakdown of the data already received by us in response to our all-area questionnaire. Specifically Appellants want lease production expenses and costs from leases where all the wells were completed after December 31, 1954, and all production during 1962 originated at depths below 10,000 feet. They want investment costs, operating expenses, depletion, depreciation, and amortization, and related production volumes as reported in the questionnaire for Continental U. S., Texas Railroad Commission District Nos. 2, 3, 4, and 10, and the Oklahoma Panhandle, Oklahoma Anadarko and Kansas areas.

On September 23, 1965, Appellants filed a petition for rehearing of our order denying the appeal.[2] Their "purpose, as stated, is to show increasing cost with depth and time, the impropriety of using the relative cost method for allocating production costs and the impropriety of fixing rates on the basis of average cost."

There is no end to the data which might prove interesting to these matters. However, we must weigh the possible materiality of the data in light of the burden of gathering and presenting the data in evidence and against the damage to the public in the accompanying delay in the completion of these proceedings. In our recent Opinion No. 468, 34 FPC 159, we have recognized the costs of new gas at whatever depth it is found in fixing a higher price for new gas in the Permian Basin Area on the basis of abundant cost data in this regard. Appellants now want a more narrow investigation of a special time period and a special depth bracket, ignoring for these purposes consideration of leases with shallower gas and leases with both deep and shallow gas. While it is theoretically possible to subdivide the composite costs in the area into "deep" and "shallow" categories we believe the record contains ample cost data to enable us to give full recognition to the costs of deeper drilling without the additional data requested by Hunt.

The suggested data also would not help decide the special question of whether gas from newly productive deeper zones in previously committed acreage deserves a new gas price. See Opinion No. 468-A, *supra*, p. 1068 at pp. 1071, 1072. This question does not require any separate showing of the costs of gas from deeper formations but rather concerns the question whether "the new gas-well gas ceiling is needed in the public interest for gas from committed acreage." Appellants' request would not illuminate this matter because it concerns the different question of the proper price for gas from deep reservoirs regardless of prior dedications. The petition for reconsideration should therefore be denied.

Commissioner Ross *not participating.*

---

[1] Hassie Hunt Trust—H. L. Hunt; Alinda Hunt Hill Trust—Caroline Hunt Sands; William Herbert Hunt Trust Estate—Lamar Hunt; Lamar Hunt Trust Estate—N. B. Hunt; A. G. Hill—W. H. Hunt; Caroline Hunt Trust Estate, Nelson Bunker Hunt Trust Estate—Hidalgo Gas Production Corporation; Hunt Oil Company—Placid Oil Company.

[2] The order in question is interlocutory and is not subject to an application for rehearing. The pleading is therefore treated as a petition for reconsideration.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

CASCADE NATURAL GAS CORPORATION (SUCCESSOR TO GARFIELD GAS GATHERING COMPANY), DOCKET NO. CP64–220

ORDER AMENDING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued October 21, 1965)

On September 16, 1965, Cascade Natural Gas Corporation (Petitioner) filed in Docket No. CP64–220 a petition to amend the order of the Commission issued in said docket on July 31, 1964, 32 FPC 476, which order authorized Garfield Gas Gathering Company (Garfield) to construct and operate certain facilities and to sell natural gas in interstate commerce for resale to Mountain Fuel Supply Company (Mountain Fuel) at an average initial daily rate of 25,000 Mcf increasing to an average daily rate of 50,000 Mcf, as more fully set forth in the petition to amend.

By the instant filing, Petitioner requests that it be substituted for Garfield as the certificate holder in Docket No. CP64–220; that Garfield's FPC Gas Rate Schedule No. 2 covering Garfield's proposed sale to Mountain Fuel be cancelled; and that Petitioner's FPC Gas Rate Schedule No. 1, tendered concurrently with the subject petition, be accepted for filing by the Commission. Petitioner's FPC Rate Schedule No. 1 is an agreement with Mountain Fuel dated September 3, 1965, which provides for the sale and delivery of natural gas to Mountain Fuel under the same general terms and conditions as heretofore proposed by Garfield.

Petitioner, presently an intrastate gas company, acquired 100 percent of all the issued and outstanding common stock of Garfield on July 2, 1965. Garfield was then dissolved as a corporation under the laws of the State of Delaware on August 23, 1965. Petitioner will be subject to the provisions of the Natural Gas Act upon the issuance of this order.

Garfield had commenced the construction of the facilities authorized by the Commission's order of July 31, 1964, and had substantially completed the construction project prior to the corporate dissolution of August 23, 1965. The proposed date of completion of the construction had been October 15, 1965.

The construction of the facilities has been initially financed through $6,500,000 of 5½ percent short-term bank credits. Prior to March 31, 1966, Petitioner proposes to refinance the short-term arrangement by issuing 20-year 5½ percent First Mortgage Bonds to some or all of its present First Mortgage Bondholders.

Due notice of the filing of the petition to amend was published in the Federal Register on October 1, 1965 (30 F.R. 12558).

On October 15, 1965, Rocky Mountain Natural Gas Company, Inc. (Rocky Mountain) filed a petition for leave to intervene in this matter stating that, prior to its withdrawal as an intervenor in the original certificate proceeding in Docket No. CP64–220, Rocky Mountain and Garfield entered into an "Emergency Gas Purchase Agreement" dated July 17, 1964, which agreement was filed as Supplement No. 2 to Garfield's FPC Gas Rate Schedule No. 2 and is a presently effective Garfield rate schedule. Rocky Mountain does not oppose the arrangement between Petitioner and Mountain Fuel and does not oppose Petitioner's request to be substituted as a certificate holder in Docket No. CP64–220. Rocky Mountain's petition is for the principal purpose of preserving its position and status under the said emergency service agreement between it and Garfield.

Subject to a certain letter filing by Petitioner, described below, Rocky Mountain offers no opposition to the petition to amend and does not oppose its disposition under the shortened procedure. In the event Petitioner's petition to amend,

as broadened by its letter filing, is not opposed by others and no formal hearing is required, Rocky Mountain does not desire to participate.

On October 14, 1965, Petitioner filed a letter requesting that Petitioner be authorized to sell natural gas to Rocky Mountain, pursuant to the said agreement between Rocky Mountain and Garfield dated July 17, 1964. Petitioner further requests that Supplement No. 2 to Garfield's FPC Gas Rate Schedule No. 2 be redesignated as Petitioner's FPC Gas Rate Schedule No. 2.

No other petitions to intervene, protests or notices of intervention have been filed in this proceeding.

The Commission finds:

(1) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the certificate of public convenience and necessity issued in Docket No. CP64–220 on July 31, 1964, be amended as hereinafter ordered.

(2) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the form requirements of the Commission's Regulations under the Natural Gas Act regarding pipeline company tariff filings be waived to permit Petitioner's FPC Gas Rate Schedule No. 1 to be accepted for filing in the form required of producers and gatherers of natural gas which are also natural gas companies.

(3) Public convenience and necessity require that in all other respects Petitioner conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

The Commission orders:

(A) The certificate of public convenience and necessity issued to Garfield Gas Gathering Company in Docket No. CP64–220 on July 31, 1964, is amended by substituting Cascade Natural Gas Corporation for Garfield Gas Gathering Company as the holder of the certificate of public convenience and necessity issued by said order.

(B) Cascade Natural Gas Corporation is authorized to render the emergency gas service to Rocky Mountain Natural Gas Company, Inc., as such service was heretofore authorized by the Commission to be rendered by Garfield Gas Gathering Company in the order of July 31, 1964, as more fully set forth in the petition for leave to intervene filed by Rocky Mountain Natural Gas Company, Inc., on October 15, 1965, and the letter filed on behalf of Cascade Natural Gas Corporation on October 14, 1965, Docket No. CP64–220.

(C) Cascade Natural Gas Corporation FPC Gas Rate Schedule No. 1, covering the proposed sale to Mountain Fuel Supply Company, is accepted for filing.

(D) Supplement No. 2 to Garfield Gas Gathering Company FPC Gas Rate Schedule No. 2 is redesignated as Cascade Natural Gas Corporation FPC Gas Rate Schedule No. 2.

(E) For the filing accepted by paragraph (B) herein, the form requirements of the Commission's Regulations under the Natural Gas Act regarding pipeline company tariff filings are waived to permit said rate schedule to be accepted for filing in the form required of producers and gatherers of natural gas which are also gas companies.

(F) In all other respects Cascade Natural Gas Company shall conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(G) Garfield Gas Gathering Company FPC Gas Rate Schedule No. 2 covering the proposed sale to Mountain Fuel Supply Company is cancelled.

(H) In all other respects said certificate of public convenience and necessity shall remain in full force and effect.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

CENTRAL GAS COMPANY, DOCKET NO. CP66-81

DECLARATION OF EXEMPTION

(Issued October 21, 1965)

Central Gas Company (Applicant) filed an application on September 20, 1965, for exemption from the provisions of the Natural Gas Act, pursuant to Section 1(c) thereof.

Applicant, an Alabama corporation with its principal place of business in Florence, Alabama, is engaged in the transportation and sale of natural gas in the State of Alabama. Pursuant to certificate authorization Tennessee Gas Transmission Company (Tennessee) sells and delivers natural gas to Applicant for transportation and sale for resale in the State of Alabama (Docket No. CP65-342, 34 FPC 452).

Applicant serves its market by means of approximately 18 miles of 3-inch and 4-inch pipeline, all of which facilities are located in Lauderdale County, Alabama, extending from a point of connection on Tennessee's Delta-Portland pipeline in an easterly direction to a point near the corporate limits of the community of Killen, Alabama. At the latter point Applicant will sell and deliver natural gas to East Lauderdale County Gas District. Applicant proposes to distribute natural gas in various small communities in Lauderdale County, Alabama.

All natural gas received by Applicant for transportation, sale and distribution through its system is and will be consumed ultimately within the State of Alabama, and all of its facilities are located within said State.

The Alabama Public Service Commission has certified to the Federal Power Commission that it has regulatory jurisdiction over the rates and services and facilities of the Applicant and is exercising such jurisdiction.

Wherefore, the Commission declares, by reason of the foregoing:

Central Gas Company is exempt from the provisions of the Natural Gas Act, and the orders, rules and regulations of the Commission issued thereunder.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

CITIES SERVICE GAS COMPANY, DOCKET NO. CP65-34

ORDER AMENDING ORDER AUTHORIZING ABANDONMENT OF FACILITIES

(Issued October 21, 1965)

On August 30, 1965, Cities Service Gas Company (Applicant) filed in Docket No. CP65-34 an application to amend the order of the Commission issued in said docket on October 28, 1964, 32 FPC 1225, authorizing the abandonment of certain segments of Applicant's transmission pipeline in Cowley and Crawford Counties, Kansas, Logan County, Oklahoma and Carroll County, Missouri, all as more fully set forth in the application to amend.

The order of the Commission issued October 28, 1964, among other things, authorized Applicant to abandon 3 miles of its Rainbow Bend 6-inch pipeline in Cowley County, Kansas, which was previously used to deliver and sell gas to Sunray DX Oil Company (Sunray) for use in its lease pumping operations

in the area. Due to the development of gas production in the area and Applicant's contracting with producers for the purchase of gas Applicant does not now desire to abandon approximately 16,069 feet of its Rainbow Bend 6-inch pipeline in Cowley County, Kansas.

Due notice of the filing of the application to amend and opportunity for hearing thereon has been given by publication in the Federal Register on September 11, 1965 (30 F.R. 11701). No protest, petition to intervene or notice of intervention has been filed in the proceeding concerning this amendment.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act, and the public convenience and necessity require that the order of the Commission issued on October 28, 1964, in Docket No. CP65–34 be amended so as to rescind authorization to abandon approximately 16,069 feet of Applicant's Rainbow Bend 6-inch pipeline in Cowley County, Kansas, previously used to deliver gas to Sunray DX Oil Company for use in its lease pumping operations in the area.

The Commission orders:

(A) The order of the Commission issued on October 28, 1964, in Docket No. CP65–34 is amended so as to rescind authorization to abandon approximately 16,069 feet of Applicant's Rainbow Bend 6-inch pipeline in Cowley County, Kansas, previously used to deliver gas to Sunray DX Oil Company for use in its lease pumping operations in the area.

(B) In all other respects said order shall remain in full force and effect.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

FLORIDA GAS TRANSMISSION COMPANY, DOCKET NOS. CP65–393 AND RP66–4

ORDER DENYING MOTION TO CONSOLIDATE PROCEEDINGS

(Issued October 21, 1965)

Sun Oil Company (Sun), on September 10, 1965, filed a motion to consolidate the above-docketed proceedings for purposes of hearing and determination. Answers objecting to Sun's motion were filed by the Commission Staff on September 21, 1965, and by Florida Gas Transmission Company (Florida Gas) on September 22, 1965.[1]

Docket No. RP66–4 involves a filing by Florida Gas for an increase in its existing transportation rates of 3.4 cents per MMBTU. Rate Schedule T–1 provides for transportation of gas from Louisiana to Florida for the account of Florida Power Corporation, while Rate Schedule T–2 provides for transportation service from Texas to Florida for the account of Florida Power & Light Company. The proposed T–1 rate of 17.9 cents per MMBTU and the proposed T–2 rate of 21.9 cents for MMBTU have been suspended until November 1, 1965.[2] The proposed rate increases would result in additional revenues of $1,732,000 annually, based on data submitted by Florida Gas for the twelve months ended May 31, 1965.

---

[1] A reply to the answers of Staff and Florida Gas was filed by Sun on September 28, 1965. This reply must be rejected, as there is no provision for such replies in the Commission's Rules of Practice and Procedure.

[2] Docket No. RP66–4, order issued September 30, 1965, 34 FPC 995.

Docket No. CP65–393 involves an application by Florida Gas for certification of an expansion of its pipeline system which would increase its annual average day capacity by 200,000 MMBTU. This additional capacity would be used to transport gas from Louisiana to Florida for the account of Florida Power & Light Company under a new Rate Schedule T–3. Florida Gas requests authorization to have 100,000 MMBTU of the additional capacity in service during 1967 and the balance in service during 1968.

In its motion to consolidate these proceedings, Sun argues that they involve common questions of law and fact. The only reason which Sun advances for this contention in its motion is its assertion that the proposed rate increase is designed to finance the proposed expansion, and that since Sun will have to absorb a major portion of the proposed rate increase,[3] "The additional transportation service proposed in Docket No. CP65–393 would be required to be subsidized essentially in its entirety by Sun."[4]

As Staff and Florida Gas point out, Sun's attempt to relate the costs of the expansion proposed in Docket No. CP65–393 to the proposed rate increase in Docket No. RP66–4 is without merit. The data submitted in support of the proposed rate increase reflect the costs of Florida Gas' system as it existed during the test year ended May 31, 1965. Thus, costs of constructing and operating the proposed pipeline expansion are not reflected in that data. There is no basis, therefore, for Sun's allegation that the expansion requested in Docket No. CP65–393 is the cause of the rate increase proposed in Docket No. RP66–4.

Sun has not supported its contention that these proceedings involve common questions of fact and law, and it is our view that there is no basis for consolidation. Sun's motion to consolidate these proceedings should, therefore, be denied.

The Commission orders:

The motion by Sun to consolidate the above-docketed proceedings is denied.

Commissioner Ross *dissenting.*

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

INDIANA NATURAL GAS CORPORATION AND TEXAS GAS TRANSMISSION CORPORATION, DOCKET NO. CP65–376

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued October 21, 1965)

On May 27, 1965, Indiana Natural Gas Corporation (Applicant) filed in Docket No. CP65–376 an application, as supplemented on July 8 and August 2, 1965, pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Texas Gas Transmission Corporation (Respondent) to establish physical connection of its transmission facilities in Crawford County, Indiana, with the proposed facilities of Applicant and to sell natural gas to Applicant for resale and distribution in the Towns of English, Marengo and Milltown, Indiana, and vicinity, all as more fully set forth in the application, as supplemented.

[3] Under the terms of the contracts whereby Sun sells gas to Florida Power Corporation and Florida Power & Light Company, the price received in the field by Sun is adjusted to reflect changes in the transportation rate charged by Florida Gas.

[4] Sun's motion, page 4.

Applicant proposes to construct and operate approximately 10.2 miles of 2 and 3-inch transmission lines from the proposed interconnection with Respondent to the three towns to be served; Applicant will also construct the necessary distribution facilities for said communities.

The estimated third year peak day and annual natural gas requirements for Applicant's proposed project are 1370 Mcf and 100,530 Mcf, respectively.

The total estimated cost of the proposed facilities through the third year is $309,842, which cost will be financed by the sale of common stock and bonds and by a small bank loan. Exhibit L of the application indicates that in the third year of service a 7.4 percent return will be realized on the project. The project is feasible.

The application indicates that Applicant has obtained the necessary state and local authorizations for the proposed project.

On June 29, 1965, Respondent filed an answer to the instant application stating that it has no objection to rendering the requested service, provided, among other things, service to Applicant does not commence until the facilities that Respondent is now constructing under authorization granted to Respondent in Docket No. CP64–107 are completed and ready for operation. Respondent states that such facilities will be completed and ready for operation no later than November 1, 1965.

Due notice of the filing of the application and opportunity for hearing thereon has been given by publication in the Federal Register on June 11, 1965, (30 F.R. 7625). No protest or petition to intervene has been filed in this proceeding.

The Commission finds:

(1) Respondent, Texas Gas Transmission Corporation, a Delaware corporation having its principal place of business in Owensboro, Kentucky, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of March 30, 1949, in Docket No. G–859 (8 FPC 190).

(2) Applicant, Indiana Natural Gas Corporation, is a corporation duly organized and existing under the laws of the State of Indiana and is authorized to engage in the business of distributing and selling natural gas within said State.

(3) It is necessary and desirable in the public interest that Respondent be directed to establish physical connection of its natural gas transmission system with the proposed facilities of Applicant and to sell and deliver up to 1,370 Mcf (14.73 psia) of natural gas per day to Applicant, as set forth in the application, as supplemented, and as hereinafter ordered and conditioned.

(4) Natural gas service to Applicant, as hereinafter ordered, should not commence prior to November 1, 1965.

(5) This order should be conditioned upon Applicant being prepared to receive gas from Respondent, as proposed, within one year from the date on which this order issues and upon the execution of a service agreement between Applicant and Respondent in accordance with the Commission's Regulations under the Natural Gas Act.

(6) The requirement that Respondent serve Applicant, as proposed, will not place any undue burden upon Respondent nor impair its ability to render adequate service to its existing customers.

The Commission orders:

(A) Texas Gas Transmission Corporation is directed to establish physical connection of its natural gas transmission system with the proposed facilities of Applicant and to sell and deliver up to 1,370 Mcf (14.73 psia) of natural gas

per day to Applicant, all as hereinbefore described and as more fully set forth in the application, as supplemented.

(B) The natural gas service to Applicant ordered by paragraph (A) above shall not commence prior to November 1, 1965.

(C) This order is conditioned upon Applicant being prepared to receive natural gas from Respondent, as proposed, within one year from the date on which this order issues and upon the execution of a service agreement between Applicant and Respondent in accordance with the Commission's Regulations under the Natural Gas Act.

(D) Respondent shall report to the Commission in writing the date of commencement of service to Applicant within ten days thereof.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

LONE STAR GAS COMPANY, DOCKET NO. CP66-22

FINDINGS AND ORDER AFTER STATUTORY HEARING PERMITTING AND APPROVING ABANDONMENT

(Issued October 21, 1965)

On July 20, 1965, Lone Star Gas Company (Applicant), filed in Docket No. CP66-22 an application pursuant to Section 7(b) of the Natural Gas Act for permission and approval to abandon the operation of certain facilities as hereinafter described and as more fully set forth in the application which is on file with the Commission

Applicant seeks permission and approval to abandon 31.59 miles of its 10-inch Navy Line between the Bowie Gate in Montague County, Texas, and the Decatur Gate in Wise County, Texas, now utilized for the transportation of gas in interstate commerce. The 10-inch Navy Line and 16-inch Line B, which parallel one another, extend from Petrolia, Texas, to the City of Fort Worth, Texas, where Applicant distributes natural gas at retail.

The abandonment will be accomplished by installing a blind plate in the Navy Line at a point near Bowie and by rearranging and closing the valves in all of the cross-over interconnections with 16-inch Line B between the Bowie and Decatur Gates. Applicant proposes to construct minor facilities to tie two lateral intrastate supply lines (BL and BK) into the Navy Line instead of Line B and install a field compressor unit on Line BG to raise line pressure so as to deliver into the isolated segment of line wet gas produced from the adjacent Boedecker South, Gifford, Osage, Sunset, Alvord and Boonesville Fields and to deliver this gas to Applicant's Springtown Gasoline Plant for processing and dehydration.

Applicant states that by isolating the 31.59 miles of Navy Line from the portions located north of Bowie and south of Decatur and from line B, it can be used as a trunk gathering facility to handle the intrastate gas received from the sources named above, and delivery to the Springtown Gasoline Plant can be made through existing intrastate pipeline facilities. The gas after processing and dehydration at the Springtown Plant will be transported to Applicant's Fort Worth area distribution systems which now receives this gas without processing and dehydration.

The proposed abandonment will not adversely affect customers by any reduction in heating value since the Springtown Plant residue gas averaged 1106

Btu for the 12-month period through May, 1965, and the additional volumes involved in the proposal contain approximately 1218 Btu per cubic foot and approximately 7 percent of Lone Star's total annual deliveries in the Fort Worth area. Line B will continue to be interconnected with the Navy Line both north and south of the segment to be isolated and has sufficient capacity to handle interstate gas moving south from Petrolia. The proposed abandonment will not result in the abandonment or any diminution of any service.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on October 20, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorizations sought and upon consideration of the record,

The Commission finds:

(1) Applicant, Lone Star Gas Company a Texas corporation having its principal place of business in Dallas, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of April 11, 1944, in Docket No. G–442 (4 FPC 565).

(2) The facilities proposed to be abandoned, as hereinbefore described and as more fully described in the application herein, are used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and such abandonment is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(3) The proposed abandonment of the aforesaid facilities is permitted by the public convenience and necessity and approval thereof should be granted as hereinafter ordered.

The Commission orders:

(A) Permission for and approval of the abandonment of the facilities hereinbefore described, as more fully described in the application in this proceeding, are granted to Applicant.

(B) Applicant shall advise the Commission of the date of abandonment of the facilities as authorized in paragraph (A) above within 10 days of such abandonment.

OPINION NO. 471–A

MICHIGAN WISCONSIN PIPE LINE COMPANY, DOCKET NO. RP60–9

OPINION AND ORDER DENYING REHEARING AND STAY

(Issued October 21, 1965)

Syllabus

1. Pipeline's customers and the public are entitled to a statement of its lateral line extension policies. P. 1189.
2. Specific ruling on each exception is not required if Commission conclusions and reasons therefor are clear. P. 1190.
3. Competitive conditions are taken into account in designing rates since rate design may seriously affect economic feasibility of pipeline; this is very different from shifting costs from one region to another in order to affect local economic conditions. P. 1190.
4. There must be some end to briefing process; similarly, oral argument is not a matter of right—it is a matter of Commission discretion and will be permitted when deemed helpful in decisional process. P. 1190.

5. Commission *denies* applications for rehearing and stay.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

BLACK, *Commissioner:*

Applications for rehearing of our Opinion No. 471 and order issued August 30, 1965, 34 FPC 621, have been filed by Michigan Wisconsin Pipe Line Company (Mich Wisc) and the Iowa-Missouri Group of customers, with the Iowa State Commerce Commission (Iowa Missouri).[1] Our opinion denied the request of Iowa-Missouri to establish rate zones on Mich Wisc's system and required Mich Wisc to file in its tariff a statement of its 10-cent rule for the extension of lateral lines 40 miles or less in length. Additionally, Mich Wisc has asked for a stay of the Commission's order regarding the filing of the 10-cent rule, until the completion of the rulemaking proceeding which was proposed therein. In the alternative Mich Wisc requests a stay pending judicial review.

Mich Wisc's request that we stay our order until completion of the rulemaking proceeding is based on a misunderstanding. We required Mich Wisc to file a statement of its 10-cent rule as part of its tariff because we found that such a consistent practice was required to be included in the tariff by the filing requirements of the Natural Gas Act and our Regulations. Recognizing the industry-wide application of this decision, we proposed to initiate "a rulemaking proceeding with a view towards requiring all natural-gas pipeline companies to include a statement of their lateral line policies in their tariffs." In this rulemaking proceeding we do not intend to reopen the question as to whether a statement of the policy must be included in the tariff. The rulemaking proceeding will rather be concerned with the type of lateral line policies that should be followed taking into consideration the many differences between pipelines and their markets.

We here require Mich Wisc to file a statement of its line extension policies. Its customers and the public are entitled to such a statement. Mich Wisc can show no injury during the pendency of this proposed rulemaking proceeding. It will, of course, be free to modify its statement to conform to the results of this rule. In the interim the public will be protected as well.

The Iowa-Missouri Group contends that the Commission did not adequately review the record alleging four substantial factual errors in our opinion. They correctly point out that the opinion is in error in contending that gas flowing southwesterly to Station 10 on peak days from the storage field and the American Louisiana connection is used to serve Illinois customers. This error, however, does not affect our conclusions. As we emphasized in our original opinion, all customers south of Station 10 benefit from such gas by displacement. The remaining allegations of error are unsupported by the record, or constitute a misrepresentation of our position, and warrant no additional comment herein.

The Iowa-Missouri Group next contends the Commission has failed to explain its decision with simplicity and clarity. Our Opinion No. 471 clearly holds that zone rates should be established whenever system wide rates are discriminatory and unfair; that the burden of proving such discrimination is upon the parties alleging it; and, that the Iowa-Missouri Group has failed to sustain its burden of proof. In addition, we compared the physical and economic basis relied on by the Commission in approving the establishment of zone rates for other pipelines.

---

[1] Allerton Gas Company, American Gas Company, Associated Natural Gas Company, Chevron Chemical Company, City of Bethany, Missouri, City of Bloomfield, Iowa, City of Lamoni, Iowa, City of Stanberry, Missouri, Iowa Electric Light & Power Co., Iowa Southern Utilities Company, Keokuk Gas Service Company, New London Gas Company, North Central Public Company, St. Joseph Light & Power Company, Wapello Light Company.

We concluded that these precedents were inappropriate for application to Mich Wisc. In contrast, we found all of Mich Wisc customers benefited from the more efficient use of the pipeline, and the greater availability of gas on this system, which result from Michigan Storage fields and the receipt of gas at points near each end of the system.

The Iowa-Missouri Group further contends that we have failed to rule explicitly on its principal exceptions. Specific ruling on each exception is, of course, not required if our conclusions and the reasons for the conclusions are clear. *N.L.R.B.* v. *Wichita Television Corp.*, 277 F. 2d 579 (CA10), certiorari denied, 364 U.S. 871; compare *Radio Station KFH Co.* v. *F.C.C.*, 247 F. 2d 570 (CADC).

The Iowa-Missouri Group also argues that in *Southern Natural Gas Co.*, 29 FPC 323, we made an allocation of system costs between zones based on a transmission component of the cost of purchased gas and that if we meant to overrule that case we should do so explicitly. In *Southern Natural*, however, the Commission was dealing with the method of allocation between zones previously established. It did not concern itself with a determination regarding the necessity of zoning. Consequently, *Southern Natural* is not applicable.

The Iowa-Missouri Group further objects to our not expressly ruling on the examiner's exclusion of evidence of economic ills in the Iowa-Missouri area. Our opinion states that such evidence was not a valid consideration in determining rates. As we there stated, rates must distribute costs equitably among the customers of a pipeline. Competitive conditions are taken into account in designing rates since rate design may seriously affect the economic feasibility of a proposed pipeline. This is very different from shifting costs from one region to another in order to affect local economic conditions.

The Iowa-Missouri Group also argues that since it has the burden of proof we should have granted its request for oral argument so that it could respond to the briefs opposing exceptions filed by the Wisconsin Interveners. The Wisconsin Interveners filed their brief opposing exceptions in accordance with Section 1.31(a) of our Rules which provides that "No further response will be entertained unless the Commission, upon motion or its own initiative, so orders." We find no necessity for so ordering. If Iowa-Missouri thought it would be justified in asking for permission to reply to the Wisconsin Interveners, it could have made timely application, but it has not done so. There must be an end to the briefing process. Similarly, oral argument is not a matter of right. This is a matter of Commission discretion, and will be permitted when the Commission deems it helpful in its decisional process.

The Commission further finds:

(1) The assignment of error and grounds for rehearing set forth in the applications for rehearing filed in this proceeding present no facts or legal principles which would warrant any change or modification in the Commisssion's Opinion No. 471 or order except as specified herein.

(2) The application for stay filed by Mich Wisc should be denied.

The Commission orders:

(A) The applications for rehearing filed by the Iowa-Missouri Group and Mich Wisc are denied.

(B) Mich Wisc's application for stay pending the rulemaking proceeding or, alternatively, pending judicial review are denied, except that the time for filing the statement required by Paragraph (B) of our order issued August 30, 1965, is extended for 30 days from the date of this Opinion No. 471–A and order.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

MISSISSIPPI RIVER CORPORATION (FORMERLY MISSISSIPPI RIVER FUEL CORPORATION), DOCKET NO. G-7376, ET AL.

ORDER AMENDING ORDERS ISSUING CERTIFICATES, REDESIGNATING PROCEEDING, AND REDESIGNATING FPC GAS RATE SCHEDULES

(Issued October 21, 1965)

On September 17, 1965, Mississippi River Corporation, formerly Mississippi River Fuel Corporation, filed a petition to amend orders issuing certificates, to redesignate pending proceedings and to redesignate FPC gas rate schedules to reflect the change of name of the company as of the close of business on May 28, 1965.

The Commission orders:

(A) The orders issuing certificates in the dockets listed below are amended by changing the name of the certificate holder from Mississippi River Fuel Corporation to Mississippi River Corporation, and in all other respects said orders shall remain in full force and effect. The related rate schedules are redesignated accordingly.

[1] Includes an application to amend filed October 29, 1964, and temporary certificate for the proposed service issued November 24, 1964, pursuant to Supplement No. 1 to FPC Gas Rate Schedule No. 11.

(B) The name of the respondent in the proceeding pending in Docket No. G-20239 is changed from Mississippi River Fuel Corporation to Mississippi River Corporation and the proceeding is redesignated accordingly.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

MISSISSIPPI RIVER TRANSMISSION CORPORATION, DOCKET NO. CP66-59

FINDINGS AND ORDER AFTER STATUTORY HEARING PERMITTING AND APPROVING ABANDONMENT OF FACILITIES AND SERVICE AND ACCEPTING TARIFF SHEET FOR FILING

(Issued October 21, 1965)

On August 23, 1965, Mississippi River Transmission Corporation (Applicant) filed in Docket No. CP66-59 an application pursuant to Section 7(b) of the

Natural Gas Act for permission and approval to abandon standby service to Arkansas Louisiana Gas Company (Arkansas Louisiana) and the related facilities necessary for such service, all as more fully set forth in the application in this proceeding.

The subject standby service is rendered near Pine Bluff, Arkansas, and is pursuant to Applicant's FPC Gas Rate Schedule S–1. Applicant states that there have been no deliveries to Arkansas Louisiana in 1963, 1964 and so far in 1965, and that Arkansas Louisiana by letter dated July 28, 1965, requested termination of said service. Applicant will abandon metering, regulating and appurtenant facilities at the delivery point near Pine Bluff.

The facilities to be abandoned are fully depreciated, have no salvage value and will be abandoned in place.

Concurrently with the filing of the subject application, Applicant tendered for filing, as its notice of cancellation of Rate Schedule S–1, First Revised Sheet No. 12 to its FPC Gas Tariff, First Revised Volume No. 1. Rate Schedule S–1 is contained in Original Sheet Nos. 12 and 13 of Applicant's FPC Gas Tariff, First Revised Volume No. 1.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on October 20, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Mississippi River Transmission Corporation, a Delaware Corporation having its principal place of business in St. Louis, Missouri, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of November 29, 1960, in Docket No. CP60–95 (24 FPC 1020).

(2) The facilities and service to be abandoned in this proceeding, as hereinbefore described, are subject to the jurisdiction of the Commission, and the abandonment of such facilities and service is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(3) Such abandonment by Applicant, as hereinbefore described, is permitted by the public convenience and necessity and should be approved as hereinafter ordered.

(4) Applicant's First Revised Sheet No. 12 to its FPC Gas Tariff, First Revised Volume No. 1, should be accepted for filing to become effective on the day this order issues.

The Commission orders:

(A) Permission for and approval of the abandonment by Applicant of the facilities and service hereinbefore described, all as more fully described in the application in this proceeding, are granted.

(B) Applicant shall advise the Commission of the date of the abandonment within 10 days of the date thereof.

(C) Applicant's First Revised Sheet No. 12 to its FPC Gas Tariff, First Revised Volume No. 1, is accepted for filing to become effective on the day this order issues.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

NORTHERN NATURAL GAS COMPANY, DOCKET NO. CP66-71

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND PERMITTING AND APPROVING ABANDONMENT

(Issued October 21, 1965)

On September 13, 1965, Northern Natural Gas Company (Applicant), filed in Docket No. CP66-71 an application as supplemented on October 11, 1965, pursuant to Sections 7(b) and 7(c) of the Natural Gas Act for permission and approval to abandon certain natural gas facilities and a certificate of public convenience and necessity authorizing the construction and operation of other facilities, all as more fully set forth in the application.

Applicant proposes (1) to (a) abandon and remove the town border station (TBS), located near St. Peter, Minnesota (St. Peter), (b) abandon in place 7.31 miles and remove .02 mile of the 6-inch branchline serving St. Peter, (2) to construct and operate a new town border station and tap at a point on its 16-inch Portland Avenue line which extends from the Welcome Compressor Station to Minneapolis, Minnesota, and (3) to construct and operate 3.1 miles of new 4-inch line over a new route.

Applicant states that the St. Peter, Minnesota (St. Peter) town border station (TBS) and a portion of the 7.3 mile 6-inch St. Peter branchline are located on land subjected to serious flooding conditions. Applicant further states that the line has deteriorated to such an extent that replacement of approximately 2000 feet per year would be required to keep this branchline in service. The new facilities will be located on higher ground and will remedy the flooding problem.

Applicant's Peoples Division (Peoples) is presently serving nine (9) right-of-way easement grantors from farm tap settings located on that section of branchline proposed to be abandoned. Due to the poor condition of the line and the high maintenance costs incident thereto, the continued operation for the limited purpose described above cannot be justified. Pursuant to the terms of the contracts, Applicant proposes that Peoples serve contract cancellation notices on each customer at least thirty (30) days prior to discontinuance of service.

Applicant anticipates that the farm tap customers will convert to propane or oil at an estimated average cost of $300 each. Peoples proposes to make a cash settlement with these customers approximating the cost of converting to another fuel.

Applicant estimates the cost of constructing the proposed facilities to be $70,000, which amount will be financed from cash on hand.

After due notice, no petition to intervene, notice of intervention, or protest to the granting of the application has been filed.

At a hearing held on October 20, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought, and upon consideration of the record,

The Commission finds:

(1) Applicant, Northern Natural Gas Company a Delaware corporation having its principal place of business in Omaha, Nebraska, is a "natural-gas com-

pany" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of April 6, 1943, Docket No. G-280 (3 FPC 967).

(2) The facilities proposed to be abandoned by Applicant, as hereinbefore described and as more fully described in the application filed in this proceeding, are used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and such abandonment is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(3) The proposed abandonment of the aforesaid facilities is permitted by the public convenience and necessity and permission and approval therefor should be granted as hereinafter ordered.

(4) The proposed construction and operation of facilities as hereinbefore described and as more fully described in the application filed in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(5) The aforesaid proposed construction and operation of facilities are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(6) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(7) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) Permission for and approval of the abandonment by Applicant, Northern Natural Gas Company, of the facilities hereinbefore described, as more fully described in the application, supplement and exhibits filed in this proceeding, are granted.

(B) A certificate of public convenience and necessity is issued to Applicant, Northern Natural Gas Company, authorizing the construction and operation of facilities, all as more fully described in the application, upon the terms and conditions of this order.

(C) The certificate issued by paragraph (B) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(D) Applicant shall advise the Commission of the date of abandonment of the facilities as authorized in paragraph (A) above within ten days of such abandonment.

(E) The facilities hereby authorized shall be constructed and placed in actual operation, and the transportation of gas authorized in paragraph (B) above shall commence as provided in paragraph (b) of Section 157.20 of the aforesaid Regulations within 12 months of the date on which this order issues.

Commissioner Ross *not participating.*

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

SUN OIL COMPANY

ORDER DENYING APPLICATION FOR REHEARING

(Issued October 21, 1965)

Sun Oil Company on September 24, 1965 filed an application for rehearing of the Commission's letter-order issued August 25, 1965, which rejected a notice of change in rate tendered by Sun proposing an increase in rate from 16¢ to 20.5¢ per Mcf for sales of gas under its FPC Gas Rate Schedule No. 124 to Transwestern Pipeline Company (Transwestern) from Kermit Field, Winkler County, Texas. In its letter-order the Commission refused to waive the condition in Sun's temporary certificate issued November 3, 1960, in Docket No. CI61–372 which prohibits the filing of any rate increase above the authorized initial rate of 16¢ per Mcf for sales under Sun's FPC Gas Base Rate Schedule No. 124. Waiver was not granted because the rate proposed by Sun was in excess of the applicable just and reasonable rate ceiling determined in Opinion No. 468, 34 FPC 159, for sales in the Permian Basin where Sun's sale is made.

Sun in its application for rehearing contends that (1) the Commission's decision in Opinion No. 468 is not applicable to Sun's price increase for the reasons set forth in its application for rehearing of that opinion, and (2) the Commission abused its discretion by refusing to follow its stated policy of waiving rate filing conditions if a permanent certificate has not been issued within three years of initial delivery, as is the situation here.

In Opinion 468–A issued October 4, 1965, *supra*, p. 1068, we acted on all applications for rehearing filed with respect to Opinion No 468, including the one filed by Sun. There is thus no need here to discuss the contentions made by Sun in its application for rehearing in that case. We need only note that Opinion No. 468 determined the just and reasonable rate to be charged by Sun a respondent in the Permian proceeding, and proscribed the filing of the rate increase here in question. In fact the moratorium on rate increase filings above the just and reasonable rate ceilings fixed in Opinion No. 468 prevents the filing of such rate increases by respondents therein for any sales in the area, whether operating under temporary or even permanent certificates.

We have in the past in a number of cases granted waiver of a rate filing condition in a temporary certificate,[1] but these cases did not involve a proposed rate filing in excess of the applicable just and reasonable rate determined by the Commission. Obviously a sale under a temporary, which even in the past required an express waiver before an increase can be filed, cannot now be permitted to pierce the ceiling price which even permanently certificated sales cannot exceed.

Sun's application for rehearing presents no new facts or principles of law which were not fully considered by the Commission in its August 25 order, or which, having now been considered, warrant any modification of that order.

The Commission orders:

For the reasons set forth above, the application for rehearing filed herein on September 24, 1965, by Sun is denied.

[1] See *Shell Oil Company*, Docket No. RI65–596, Order issued April 20, 1965; *Shell Oil Company*, Docket No. RI65–652, order issued July 1, 1965, and *Socony Mobil Oil Company, Inc.*, Docket No. RI66–21, *et al.*, order issued July 21, 1965.

VILLAGE OF GRESHAM, WISCONSIN, PROJECT NO. 2464

ORDER APPROVING PROJECT EXHIBIT L DRAWINGS

(Issued October 25, 1965)

On August 9, 1965, the Village of Gresham, Wisconsin, licensee for Project No. 2464, filed for Commission approval Exhibit L drawings pursuant to Article 21 of the license for the proposed Weed Dam project.

While the drawings show no major changes in the project structures, they do show that a small generating unit rated at 10 kw has been added to the proposed project to supply initially a continuous flow of not less than 7 cubic feet per second of water for the benefit of fish in the by-passed 700-foot stretch of river between the Weed dam and the end of the tailrace, in compliance with Article 28 of the license. According to the licensee, the cost of the unit is estimated to be about $4,000, and the average annual energy generation is estimated to be 87,600 kwh which would otherwise be lost and would have to be purchased from Wisconsin Power & Light Company at an average annual cost considerably higher than the average annual cost of the unit which is estimated to be $200.

The Commission finds:

The following described Exhibit L drawings conform to the Commission's rules and regulations and should be approved as part of the license for the project, and the exhibits described in the finding as being superseded should be eliminated from the license for the project:

Exhibit	Approved Exhibits FPC No. 2464	Superseded Exhibits FPC No. 2464	Showing
L-1	6	3	Project layout.
L-2	7	4	General plan.
L-3	8	5	Spillway and walls.

The Commission orders:

The Exhibit L drawings described in the above finding as conforming to the Commission's rules and regulations are hereby approved as part of the license for Project No. 2464, and the exhibits described in the same finding as being superseded are hereby eliminated from the license for the project.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

PACIFIC POWER & LIGHT COMPANY, DOCKET NO. E-7236

ORDERS AUTHORIZING ACQUISITION, MERGER OR CONSOLIDATION OF FACILITIES

(Issued October 25, 1965)

Pacific Power & Light Company (Pacific) filed an application on August 3, 1965 with the Federal Power Commission for an order, pursuant to Section 203 of the Federal Power Act, authorizing the acquisition of certain electric facilities from Riverton Valley Electric Association, Inc. (Riverton Valley).

Pacific is a corporation organized in Maine and qualified to do business in the States of California, Idaho, Montana, Oregon, Washington, and Wyoming. It is engaged primarily in the business of generating, purchasing, transmitting, selling, and distributing electric energy.

Riverton Valley is an REA financed distribution cooperative system engaged in the transmission and distribution of electric energy to its members in Fremont County, Wyoming.

According to the application, the facilities to be acquired by Applicant from Riverton Valley consist of distribution facilities located in Fremont County, Wyoming which serve generally residential and commercial customers located in the area, including poles, conductors and appurtenances used in rendering the service affected. Pacific states that approximately 175 customers are served by these facilities and that it will continue to operate these facilities in the same manner as they are presently operated. Pacific further states that the consideration to be paid for the facilities is the sum of $73,674.12. As part of the transaction Riverton Valley will acquire from Pacific distribution lines and related facilities for which it has agreed to pay the sum of $22,842.08.

According to Pacific the transaction will conclude a dispute between it and Riverton Valley which arose because both Riverton Valley and Mountain States Power Co. (predecessor in interest to Applicant) were granted Certificates of Convenience and Necessity by the Public Service Commission of Wyoming to serve the same area in the vicinity of the community of Lander in Fremont County. Upon application of the parties, the Public Service Commission arbitrated the dispute and assigned specific service areas to each of the parties, under the authority of § 37–12, W.S. 1957. The arbitration award, made on August 2, 1961, was upheld by the Supreme Court of Wyoming. *Riverton Valley Electric Ass'n* v. *Pacific Power & Light Co.*, 391 P. 2d 489 (1964). Subsequently, Applicant and Riverton Valley entered into an agreement in accordance with the arbitration award. The agreement was approved by the Public Service Commission of Wyoming on June 28, 1965.

The acquisition will not result in the creation of an acquisition adjustment on the books of Pacific and the sale will not result in a gain or loss on Pacific's books.

The exchange of facilities is expected to have the following effect on rates: (a) 105 residential customers of Riverton Valley to be served by Pacific (not having water heaters)—no change in rates; (b) 45 residential customers of Riverton Valley to be served by Pacific (having water heaters)—estimated monthly rate decrease of $3.13; (c) 28 residential customers of Pacific to be served by Riverton Valley (having water heaters—estimated monthly rate increase of $4.01; (d) 29 commercial customers of Pacific to be served by Riverton Valley—estimated monthly rate decrease of $9.09; and (e) 4 small industrial customers of Pacific to be served by Riverton Valley—no change in rates.

Written notice of the application has been given to the Public Service Commission of Wyoming and to the Governor of that State. Notice has also been given by publication in the Federal Register on August 21, 1965 (30 F.R. 10923), stating that any person desiring to be heard or to make any protest with reference to the application should file a petition or protest on or before September 8, 1965, with the Federal Power Commission, Washington, D.C. 20426. No protest or petition or request to be heard in opposition to the granting of the application has been received. The proposed exchange of facilities has been approved by the Public Service Commission of Wyoming, in an order dated June 28, 1965.

The Commission finds:

(1) Pacific, a corporation, is a public utility within the meaning of Section 203 of the Federal Power Act, subject to the jurisdiction of the Commission as here-

tofore described and set forth in the Commission's order issued March 28, 1962, *Pacific Power & Light Company*, (27 FPC 620).

(2) By the proposed transaction, Pacific will merge or consolidate its facilities subject to the jurisdiction of the Commission with those of Riverton Valley, another person, within the meaning and subject to the requirements of Section 203 of the Federal Power Act.

(3) The proposed acquisition of facilities by Pacific, as described above, upon the terms and conditions set forth in the application, and subject to the provisions of this order will be consistent with the public interest as expressed in Section 203 of the Federal Power Act.

The Commission orders:

(A) The proposed acquisition by Pacific of the aforementioned electric facilities, all as described above, is authorized and approved upon the terms and conditions and for the purposes set forth in the application subject to the provisions of this order.

(B) Pacific shall record the proposed transaction herein authorized and the facilities and properties referred to above as provided in the Commission's Uniform System of Accounts Prescribed for Public Utilities and Licensees.

(C) This authorization shall expire unless the transaction herein authorized and approved is consummated within 90 days from the date of issuance of this order.

(D) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuation, estimates or determinations of cost, or any matter whatsoever now pending or which may come before this Commission or any other regulatory body and nothing herein shall be construed as an acquiescence by this Commission in any estimate or determination of cost or any valuation of property claimed or asserted.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

AREA RATE PROCEEDING, DOCKET NO. AR61-1; CLAUDE E. AIKMAN, ET AL., G-18466, ET AL.; NORTH CENTRAL OIL CORPORATION (OPERATOR), ET AL., CI60-435, ET AL.

ORDER AMENDING OPINION NO. 468 AND ORDER

(Issued October 29, 1965)

Concurrent with the issuance of Opinion No. 468, 34 FPC 159, and related orders in the above-designated proceedings, the Commission issued in Docket No. R-279, 34 FPC 434, a notice of proposed rule-making pertaining to miscellaneous amendments to the Regulations Under the Natural Gas Act which would give relief of rate and certificate filings by small independent producers. After receipt of comments, on this date we have issued Order No. 308, *infra*, p. 1202, in Docket No. R-279 which adopts with some modifications the amendments to the Regulations set out in the rule-making notice. In view of the fact that certain sections of Opinion No. 468 refer to the notice of proposed amendments to the Regulations and not to the adopted changes, we deem it necessary and proper that Opinion No. 468 be modified as hereinafter ordered.

The Commission orders:

(A) In that part of Opinion No. 468 entitled "SMALL PRODUCER PROBLEM," pages 234 to 236 inclusive, each and every reference to the notice of proposed rule-

making, or specific provisions thereof, issued in Docket No. R–279 shall be considered to refer to Order No. 308, or specific provisions adopted therein, issued this date in Docket No. R–279.

(B) Subparagraph 3 of Paragraph (F) of the order issued together with Opinion No. 468 shall be amended to read as follows:

(3) Any respondent listed in Part I or Part III to Appendix A is exempt from filing the statement required by subparagraph (1) hereof for any sales which are "small producer sales" as defined in Section 157.40(a)(3) of the Regulations Under the Natural Gas Act, if by November 30, 1965, such respondent files the information required by the form set out in Section 250.10 of the Regulations. If the Commission subsequently finds that such a producer does not qualify as a small producer such applicant shall be required to file the statement required by subparagraph (1) hereof within 90 days after any Commission finding.

Commissioner Bagge *not participating.*

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

CONTINENTAL OIL COMPANY AND CONTINENTAL GAS PRODUCING COMPANY, DOCKET NO. G–2737; CITIES SERVICE GAS COMPANY, ET AL., DOCKET NO. RP64–9, ET AL.

ORDER GRANTING MOTIONS TO CONSOLIDATE PROCEEDINGS AND TO JOIN ADDITIONAL PARTY AND ESTABLISHING PROCEDURE FOR HEARING

(Issued October 29, 1965)

Continental Oil Company (Continental), on June 25, 1965, filed an application in Docket No. G–2737 pursuant to Section 7(c) of the Natural Gas Act requesting the Commission to amend the certificate issued in that proceeding to reflect Continental as the holder of that certificate. On November 30, 1954, a certificate was issued to Cities Service Gas Producing Company in Docket No. G–2737. By order issued May 18, 1964, that certificate was amended to reflect a change in name of the holder of that certificate to Continental Gas Producing Company. In its application here, Continental alleges that Continental Gas Producing Company, its wholly owned subsidiary, was dissolved and that all of the assets of Continental Gas Producing Company passed to Continental as sole stockholder in liquidation.

The proceedings in Docket No. RP64–9, *et al.* involve a proposed rate increase filed by Cities Service Gas Company (Gas Company), wherein a settlement was approved by Commission order issued June 28, 1965, 33 FPC 1292. The settlement as approved reserved for future hearing and determination, among other things, the issue of the proper allowance to be included in Gas Company's cost of service for purchases of gas from Continental Gas Producing Company. Testimony and exhibits have been filed in Docket No. RP64–9, *et al.*, on that issue and cross-examination is scheduled to commence on November 2, 1965.

Gas Company "spun-off" its producing properties in 1953 to Cities Service Gas Producing Company and in return therefor received 100 percent of the stock of that company. Following a series of intercorporate transactions within the Cities Service system, the stock of Cities Service Gas Producing Company was sold on May 8, 1963, by Cities Service Company—the parent corporation, to Continental Oil Company.

On July 29, 1965, City Group Gas Defense Association (City Group) filed a petition to consolidate the proceeding in Docket No. G–2737 with the proceedings in Docket No. RP64–9, *et al.* On September 9, 1965, City Group also filed a motion in Docket No. G–2737 to join Gas Company as an additional party in that proceeding. On September 10, 1965, City Group filed, in Docket No. RP64–9, *et al.*, a motion to join Continental as an additional party in those proceedings and to consolidate those proceedings with the proceedings in Docket No. G–2737.

In its several motions, City Group states that its position on the reserved issue in Docket No. RP64–9, *et al.*, is that the proper amount to be included in Gas Company's cost of service is the cost incurred by Continental Gas Producing Company to produce the volumes of gas delivered to Gas Company because, among other things, the purported "spin-off" of these properties should not be permitted to adversely affect the rates Gas Company's customers should pay for the gas. City Group contends that the attempted "spin-off" is a scheme designed to unnecessarily increase Gas Company's allowable purchased gas costs and to allow Gas Company, or its parent, to reap the benefits from such increased cost in the form of part of the consideration received from the sale of the stock, all to the detriment of Gas Company's consumers and the public interest. City Group further alleges that a decision in the certificate case would prejudge the reserved issue in the pending rate case and tend to render impractical a decision in that rate case on the basis contended by City Group. Additionally, City Group contends that the acquisition of the assets by Continental is an unauthorized abandonment of services by Continental Gas Producing Company and an unauthorized acquisition of facilities by Continental and that the Commission has jurisdiction over this transaction. City Group also argues that the joinder of parties and consolidation of the proceedings requested by it is necessary to accord it the full relief that it requests and is entitled to receive.

Answers to these motions were filed by Continental on August 9, 1965, and September 20, 1965; by Gas Company on September 20, 1965; and by the Commission's Staff on September 21, 1965. Each of the answering parties request denial of the motions filed by City Group. Continental alleges that the only issue involved in the certificate case is the identity of the holder of the certificate and a decision on that issue will not affect Gas Company's purchased gas cost. Continental also contends that the sale of stock is not a transaction requiring Commission approval and that the return of this stock, urged by City Group is beyond this Commission's power. Additionally, Continental alleges that, when affiliation has ended, as here, the rates of the producer, in a pipeline rate case, are not in issue. Continental further states that the rates from this property are presently in the process of determination in a pending area rate proceeding, Docket No. AR64–1, which proceeding also involves the issue respecting the regulation of pipeline and pipeline affiliate production. Continental also urges that the rates paid by Gas Comany from these properties will not be changed inasmuch as the purchases will be made under the same contract and the rates thereunder have been approved by the Commission and are not subject to change in the certificate proceeding. Continental also claims that the "spin-off" occurred and was recognized by the Commission 12 years ago, when Continental had no interest therein. Gas Company alleges that the motion to consolidate the proceedings would enlarge the reserved issue in the rate proceeding in violation of the settlement agreement approved by the parties and the Commission and was not timely filed. The Staff contends that the issue in each proceeding is dissimilar, that Continental is not an indispensible party to the rate proceeding, and that ownership of the properties should not control the cost to be included in Gas Company's cost of service for gas received from reserves heretofore owned by its affiliated production company.

The application filed by Continental in Docket No. G–2737 states that Continental Gas Producing Company was dissolved and its assets, upon dissolution, were passed on to Continental as sole stockholder in liquidation. It appears, therefore, that in addition to a stock transaction, it is now asserted that an acquisition of assets has been effectuated. Such acquisition of assets is subject to the jurisdiction of this Commission under Section 7 of the Natural Gas Act. *California* v. *F.P.C.*, 369 U.S. 482, 489. The City Group motion thus raises at least a threshold question whether by successive applications filed by Continental's subsidiary and Continental itself there has been an effective transfer of facilities from within the Cities Service system to non-affiliated parties which, if permitted to become effective (assuming without deciding that we have authority to prevent such effectuation), might foreclose City Group from fully developing its theory of the case on the reserved issue in the rate proceeding. We believe that complete and comprehensive evidence regarding the ownership and operation of the assets and facilities involved in Docket No. G–2737 and the effect and relationship, if any, of such evidence on the reversed issue in Docket No. RP64–9 can more appropriately be developed in a consolidated proceeding. Accordingly, it is our view that the motions for consolidation and the joining of an additional party should be granted. We need hardly state that nothing in this action should be taken as indicating any Commission approval or disapproval of the merits of City Group's contentions.

Our decision to consolidate also requires that we establish a hearing procedure for the consolidated proceedings and that the hearing presently set for November 2, 1965, in Docket No. RP64–9, *et al.* be recessed as hereinafter ordered.

The Commission orders:

(A) The motions filed by City Group for consolidation of the above-entitled proceedings and for joining additional party are hereby granted.

(B) The hearing presently scheduled to convene on November 2, 1965, in Docket No. RP64–9, *et al.*, is hereby recessed.

(C) The reversed issue in Docket No. RP64–9, *et al.* discussed hereinabove and the proceeding in Docket No. G–2737 are hereby consolidated for purposes of hearing and decision.

(D) Pursuant to Section 1.18 of the Commission's Rules of Practice and Procedure, a pre-hearing conference before the Presiding Examiner shall commence at 10:00 a.m. (EST) on November 9, 1965, in a hearing room of the Federal Power Commission, 441 G Street, N.W., Washington, D.C., for the purpose of reaching such agreements as will expedite the determination of the issues involved herein, including, but not limited to, stipulation of facts, narrowing and defining issues, and establishment of dates for the service of evidence by all parties and for the cross-examination of all testimony.

(E) The cross-examination, when commenced, shall be continuous unless the Presiding Examiner finds that extraordinary circumstances preclude such procedure.

(F) Presiding Examiner Robert Weston, or any other officer designated by the Chief Examiner for that purpose (See, Delegation of Authority, 18 CFR 3.5(d)), shall prescribe other relevant procedural matters not herein provided, shall preside at the prehearing conferences and at the hearing in these matters, and shall control these proceedings until the completed record is certified to the Commission, pursuant to the Commission's Rules of Practice and Procedure.

RATE AND CERTIFICATE FILINGS BY SMALL INDEPENDENT PRODUCERS, DOCKET NO. R-279

ORDER NO. 308

RELIEF FROM FILING REQUIREMENTS UNDER THE NATURAL GAS ACT FOR SMALL PRODUCER SALES

(Issued October 29, 1965)*

This order amends the regulations under the Natural Gas Act to grant relief from certificate and rate filing requirements in the case of small producer sales in the Permian Basin area. By notice of August 5, 1965 (30 F.R. 10058), 34 FPC 434, issued the same day as the Commission's decision in the Permian Basin area rate case (Docket No. AR61-1), the Commission proposed to relieve small producers of the necessity for filing detailed certificate and rate documents for each sale. Instead, a small producer would operate under a general certificate authorizing one or more sales in the area and would file a single annual rate statement of compliance with the appropriate area price restrictions. Our Permian decision provided that sales made pursuant to a small producer certificate should at no time exceed the base price determined as just and reasonable, but would not be subject to the further detailed quality adjustments.

Pursuant to the notice of rulemaking, eleven parties have filed comments with the Commission.[1] Amerada, Cockrell, Hunt and Sun generally oppose the rulemaking proposal. Thus, Amerada contends that the rule constitutes unwarranted discrimination in favor of small producers. The distinguishing characteristics justifying special relief for small producers were set forth in our Permian decision (Opinion No. 468, 34 FPC 159). Moreover, such procedural relief in favor of small producers compensates for some advantages that only large producers enjoy as a practical matter. Thus, "producer warranty-type" sales which have become prevalent in recent years[2] offer many advantages to pipeline purchases, but require a degree of reserves support which small producers cannot provide. Our rule helps to correct the imbalance. Moreover, the comments filed by Associated Gas Distributors, OIPA, and TIPRO observe that the rule would improve the marketing of natural gas, simplify the administration of the Act, and benefit both gas consumers and small producers.

Hunt Oil Company, *et al.* argue that the 10 million Mcf cutoff between large and small producers is arbitrary and unwarranted. Hunt suggests that evidence it offered in another proceeding would justify a higher cutoff. As TIPRO has observed, the 10 million Mcf cutoff evolved out of Commission experience. A line must be drawn at some point; we believe 10 million Mcf is here justified. *Addison* v. *Holly Hill Products, Inc.*, 322 U.S. 607, 611.

OIPA urges that the proposed rule be extended immediately to pricing areas outside the Permian Basin. There are no just and reasonable rate determina-

[1] Amerada Petroleum Corp., Associated Gas Distributors, E. Cockrell, Jr., El Paso Natural Gas Company, Hunt Oil Company, *et al.*, Independent Petroleum Association of America, Oklahoma Independent Petroleum Association, Southern Natural Gas Company, Sun Oil Company, Texas Independent Producers & Royalty Owners Association, and United Gas Pipe Line Company.

[2] *Pan American Petroleum Corp.*, 34 FPC 852, order issued September 15, 1965, in Docket No. CI65-584.

tions for the other areas at this time. OIPA would have us use the guideline certificate price under our general policy statement (18 CFR 2.56) as the basis for issuing small producer certificates. However, the appropriate initial price is often subject to controversy and resolution in particular hearings; both producer and consumer interests sometimes contend that the appropriate "in-line" price differs from our guideline. In any event we believe that our procedural innovation should be tested fully in the Permian Basin area before we consider a separate rulemaking proceeding to extend similar relief to small producer sales elsewhere.

A number of comments question in the intent of the proposed rule in situations where two or more producers have an interest in a single sale. We shall clarify the rule to extend relief to every interest of a qualifying small producer; this will include situations in which a small producer's interest is sold under his own contract, or under a large producer's contract, or under another small producer's contract. Where several small producers have interests in a single contract, we shall permit them to be covered by a single small producer certificate. Moreover, where large producer interests in a small producer contract amount to 12½% or less, we shall permit the small producer certificate to cover these fractional interests as well as small producer interests. Hunt, *et al.* urge that the rule be amended to cover large producer interests greater than 12½% under a small producer certificate. Hunt points out that large producers often farm out leases to small producers retaining an overriding royalty interest in the property (which is sometimes convertible on certain contingencies to a working interest). Hunt says that it "is not uncommon for this overriding royalty interest to exceed 12½%". Hunt does not contend, however, that overrides in excess of 12½% are common in the Permian Basin area and our attention has not been called to any such instances in this area. On the other hand, the Commission's files reflect a number of farm out agreements in which large producers in the Permian Basin area have retained less than a 12½% overriding royalty interest (*e.g.* ⅞'s of ⅛ interest).[3] On the basis of the information and experience now available, we do not believe that any further modification of the rule is warranted.

In order to permit large producers whose interests are covered by small producer rate schedules to file rate schedules of their own, we shall amend the Regulations to permit such filings, even if the large producer is not a signatory to the gas purchase contract. In such cases, the large producer's rate schedule will consist of a copy of the small producer's contract and a document indicating the large producer's ownership interest. As matters now stand, exercise of this rule will be quite rare.

A number of comments (by Hunt, *et al.*, IPAA and TIPRO) criticize the proposed provision creating a presumption that producers who are related are under common control and therefore should be treated as one for purposes of determining whether they are small producers. We shall clarify the intent of the rule by providing that relationship may be the basis of common control without creating a formal presumption that such is the case in every instance.

El Paso has suggested that pipeline companies be excluded from the definition of "affiliated producers" under the common control test. We do not adopt this suggestion and make clear, to the contrary, that a company which is affiliated with a pipeline company is not eligible for the "small producer" classification, even though its jurisdictional sales be small. The rationale underlying the special relief afforded small producers applies only to fully-independent entities and not to companies which have the advantage of a pipeline affiliation.

[3] There are a few instances in the Permian Basin in which a large producer has a working interest exceeding 12½% in a small producer contract.

El Paso further suggests a clarification to provide that joint operating agreements between two or more producers will not, standing alone, be deemed to indicate common control. This we adopt.

We also adopt El Paso's suggestion that the volumetric test of a small producer, 10 million Mcf a year, be applied on a calendar year basis.

El Paso suggests that where a small producer becomes a large producer, he should be required to make new certificate and rate schedule filings for his previously authorized contracts. We see no reason to impose this burden upon the producer who expands his operation and we do not adopt the suggestion.

Sun Oil Company suggests that the rule would be more specific if the 10 million Mcf cutoff were tied to a particular pressure base. We shall adopt this suggestion, and select the pressure base of 14.65 psia utilized in Opinion No. 468. Sun further criticizes as vague a provision permitting revocation of a small producer certificate for "other good cause". We agree and shall substitute a provision for revocation in case of violation of the Natural Gas Act, regulations or terms of the certificate.

Sun also expresses the fear that the wording of our rule may subject small producer sales to detailed quality differential adjustments, contrary to the holding in the Permian decision. In order that our rule may be explicit and self-contained, we shall spell out the prices governing sales under a small producer certificate in the language of the Permian decision. If a small producer seeks a different price for a particular sale, he would do so by applying for a separate certificate for that sale.

TIPRO suggests that the application for a small producer certificate list owners of 10% or more of the applicant, rather than 5% or more as proposed by the notice. TIPRO asserts that this change would substantially reduce the administrative burdens upon applicants. As a matter of administrative convenience we shall adopt TIPRO's proposal.

Southern Natural and El Paso request service of applications for small producer certificates and copies of the Commission's order upon all existing purchasers. Commission practice provides for such service of Commission orders and will continue in effect. We shall adopt the suggestion as to service of the applications.

United Gas Pipe Line Company asserts that the proposed reporting by purchasers from holders of small producer certificates would be unduly burdensome and urges that any reports be filed by the small producers. We do not consider the proposed amendment to the Form 2 to be unduly burdensome. However, the notice proposed reporting in the Forms 2 and 2A annual reports only. Since these reports are made only by pipeline companies, the notice did not extend to reporting by independent producers who purchase gas from small producers. The Commission desires to adopt a reporting procedure applicable to all purchasers from small producers and will, to that end, issue a further notice of proposed rulemaking in this docket limited to the matter of reporting.

The Commission finds:

The amendments herein adopted are necessary and appropriate for the purposes of the administration of the Natural Gas Act.

The Commission, acting pursuant to the authority granted by the Natural Gas Act, as amended, particularly sections 4, 7 and 16 thereof (52 Stat. 822, 824, 830; 56 Stat. 83; 76 Stat. 72; 15 U.S.C. 717c, 717f, 717o) *orders:*

(A) Parts 154 and 157 of Subchapter E and Part 250 of Subchapter G, Chapter I, Title 18 of the Code of Federal Regulations, are amended as follows:

1. Part 157 is amended by adding a new § 157.40 as follows:

"§ 157.40 Small producer certificates of public convenience and necessity.

(a) *Definitions*

(1) A 'Small Producer' is an independent producer of natural gas as defined in § 154.91 of this chapter, who is not affiliated with a natural gas pipeline company and whose total jurisdictional sales on a nationwide basis, together with such sales of 'affiliated producers' are not in excess of 10,000,000 Mcf at 14.65 psia during any calendar year. As used in this section, the term 'jurisdictional sales' includes volumes of gas paid for but not taken under prepayment clauses or otherwise, and volumes of gas sold under other independent producer rate schedules in the proportion that the independent producer seeking to come within this section has an interest in such sales, but does not include sales made pursuant to percentage sales contracts.

(2) 'Affiliated producers' are persons who, directly or indirectly, control, or are controlled by, or are under common control with, the applicant producer. Such control exists if the producer has the power to direct or cause the direction of, or as a matter of actual practice does direct, the management and policies of a person, whether such power is exercised alone or through one or more intermediary companies, or pursuant to an agreement, and whether such power or practice is established through a majority or minority ownership or voting of securities, common directors, officers or stockholders, voting trusts, holding trusts, associated companies, relationship of blood or marriage, or any other direct or indirect means. For the further purposes of this section, the term 'agreement' shall not include any agreement for the operation of a natural gas producing property or a plant processing natural gas unless such agreement otherwise establishes the power to direct or cause the direction of the management and policy of a person.

(3) 'Small producer sales' are (i) sales by a small producer of his own interests under his own contracts; (ii) sales of all interests under a small producer's contract if producers not qualifying as small producers have interests which in the aggregate are no greater than 12½ percent; and (iii) sales of a small producer's interests under another producer's contract.

(b) *Requirements for the small producer certificate.* Upon the approval of appropriate applications made pursuant to the provisions of this section, Small Producers will be granted 'Small Producer Certificates' authorizing 'small producer sales' of natural gas in interstate commerce at prices no higher than the applicable just and reasonable area ceiling for such gas, without further certification from the Commission.

(1) Small Producer Certificates are initially available only to Small Producers operating in the Permian Basin and are applicable only to their small producer sales in that area and will authorize sales at prices no higher than:

(i) For new gas-well gas sold and to be sold pursuant to contracts executed on or after January 1, 1961, and any residue gas derived therefrom:

(*a*) In Texas Railroad Districts No. 7–c and 8—*16.5 cents per Mcf* (at 14.65 psia).

(*b*) In Lea, Eddy and Chaves Counties in New Mexico—*15.5 cents per Mcf* (at 14.65 psia) plus the applicable state and local production taxes in effect on September 1, 1965.

(ii) For gas-well gas, sold and to be sold pursuant to contracts executed before January 1, 1961, and any residue gas derived therefrom, and for all casinghead gas and any residue gas derived therefrom and to be sold:

(*a*) In Texas Railroad Districts No. 7–c and 8—*14.5 cents per Mcf* (at 14.65 psia).

(b) In Lea, Eddy and Chaves Counties in New Mexico—*13.5 cents per Mcf* (at 14.65 psia) plus the applicable state and local production taxes in effect on September 1, 1965.

(iii) "Gas-well gas" means gas from dry gas reservoirs and gas condensate reservoirs, and gas from gas-cap wells. Such certificates will apply to the production in other areas and the producers therein located upon the fixing of just and reasonable rates for such areas by the Commission.

(2) Small Producers may apply for a small producer certificate to cover all previous and all future jurisdictional sales in the Permian Basin, which do not raise the producer's total jurisdictional sales on a nationwide basis above 10,000,000 Mcf during any calendar year. Applications by these producers shall include the following information: (i) total jurisdictional sales on a nationwide basis for the year preceding the application; (ii) a list of outstanding certificates and rate schedules together with names and percentage of interest of other interest owners under such rate schedules; (iii) a list of outstanding rate schedules of others in which applicant owns an interest together with applicant's percentage of interest; and (iv) the names of all owners (stockholders, partners, joint venturers, etc.) of the applicant with an interest of 10 percent or more, their percentage of ownership in the applicant and in any other natural gas company, and any positions such owners may hold with another natural gas company.

(3) An applicant for small producer certificates who has no outstanding certificate issued by, or rate schedule filed with, this Commission for the sale of natural gas shall include the following information in his application:

(i) a list of all contracts to sell natural gas in interstate commerce,

(ii) source of production, total rate and the annual volume delivery obligations of the producer under each such contract, together with names and percentage of interest of other interest owners under each such contract, and

(iii) a list of owners of the applicant with an interest of 10 percent or more, their percentage of ownership in the applicant and in any other natural gas company and any position such owners may hold with another natural gas company.

(4) The application shall contain the information required by the form set out in § 250.10 of this chapter. A conformed copy shall be served upon each of the applicant's purchasers without regard to the area from which the gas is produced.

(c) *Duration of the small producer certificate.* A small producer certificate issued hereunder shall remain in effect for small producer sales until the Commission on its own motion or on application terminates such certificate because the producer no longer qualifies as a small producer or fails to comply with the requirements of the Natural Gas Act, the regulations thereunder, or the terms of the certificate. Upon such termination the producer will be required to file separate certificate applications and individual rate schedules for future sales but the small producer certificate will still be effective as to those past sales already certificated thereunder."

2. Part 154 is amended by adding a new paragraph (f) to § 154.91; by redesigning § 154.103 as § 154.10 and amending it; and by adding a new § 154.104, as follows:

"§ 154.91 Applicability.

* * * * * * *

(f) *Filing by certain non-signatories.* Where the operator and the signatory co-owners in a particular sale have secured a small producer certificate pursuant to § 157.40 covering the sale, and where any non-signatory co-owner's interests are not covered by the small producer certificate, such co-owner may file rate

schedules, rate changes, or certificate applications with respect to such interests notwithstanding the provisions of paragraph (d) of this section.

* * * * * * *

§ 154.103 (Vacated and reserved).

§ 154.104 Annual statements by small producers.

Annual statements certifying to the matters enumerated in the form set out in § 250.11 of this chapter shall be filed by all producers, either individually or by groups, to whom small producers certificates have been issued. The statements shall be submitted by February 15 of each year for the preceding calendar year.

* * * * * * *

§ 154.110 Applicability of §§ 154.92 through 154.102.

Sections 154.92 through 154.102 shall apply only to those persons specified in § 154.91 and shall not apply to small producer sales made under small producer certificates issued pursuant to § 157.40 of this chapter."

3. Part 157 is further amended by redesignating § 157.31 as § 157.39 and amending it as follows:

"§ 157.21 (Vacated and reserved)

§ 157.39 Applicability of §§ 157.23 through 157.30.

Sections 157.23 through 157.30 shall be applicable to independent producers as defined in § 154.91 of this Chapter, with the exception of those independent producers who are subject to § 157.40."

4. Part 250 is amended by adding two new sections, set out in the attachments hereto* and entitled, respectively, as follows:

"§ 250.10 Application for small producer certificate of public convenience and necessity.

§ 250.11 Annual statement for independent producers holding small producer certificates."

* * * * * * *

[Secs. 4, 7, 16; 52 Stat. 822, 824, 830; 56 Stat. 83; 76 Stat. 72; 15 U.S.C. 717c, 717f, 717o]

(B) The amendments prescribed herein shall become effective upon the issuance of this order.

(C) The Secretary shall cause prompt publication of this order to be made in the Federal Register.

*Omitted in printing.

ATLANTA GAS LIGHT COMPANY AND SOUTHERN NATURAL GAS COMPANY, DOCKET NO. CP66-51

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued November 1, 1965)

On August 13, 1965, Atlanta Gas Light Company (Applicant) filed in Docket No. CP66-51 an application pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Southern Natural Gas Company (Respondent) to establish physical connection of its natural gas transmission facilities with the distribution facilities to be installed by Applicant in the Town of Blythe, Georgia, and its environs, and to sell natural gas to Applicant for resale through such distribution facilities, as more fully set forth in the application.

The proposed connection will be the initial connection with Respondent's pipeline for service to Blythe, although Applicant's distribution systems in other areas of Georgia are connected to Respondent's lines at various delivery points.

Applicant proposes that Respondent construct a meter and regulating station at its tap on the main line north of Blythe, from which Applicant will install 1.6 miles of 2-inch low pressure distribution line and appurtenant facilities.

Applicant estimates the natural gas requirements for the proposed area to be as follows:

	1st year	2d year	3d year
Annual (Mcf)	5,072	6,283	7,817
Peak day (Mcf)	78	90	106

The distribution facilities which Applicant proposes to construct in Blythe are expected to cost $25,223, and they will be financed from current construction funds. Applicant's anticipated third year net income from the project is $1,412, resulting in a 6.17 percent incremental rate of return. The project appears economically feasible.

By its letter filed on September 13, 1965, Respondent stated that it has no objections to the proposal, subject to the approval of its application for a temporary certificate of public convenience and necessity authorizing the operation of the facilities heretofore authorized to be constructed in Docket No. CP64-314. The temporary certificate for said operation was issued by the Commission on October 19, 1965.

Due notice of the filing of the application and opportunity for hearing thereon was published in the Federal Register on August 31, 1965 (30 F.R. 11184). No protest, petition to intervene or notice of intervention has been filed.

The Commission finds:

(1) Southern Natural Gas Company, a Delaware corporation having its principal place of business in Birmingham, Alabama, is a "natural-gas com-

pany" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of October 6, 1942, in Docket No. G–296 (3 FPC 822).

(2) Applicant is a public utility company in the State of Georgia and is authorized to construct and operate facilities to distribute and sell natural gas to inhabitants of the communities along its system.

(3) It is necessary and desirable in the public interest that Respondent be directed to establish physical connection of its transportation facilities with the facilities proposed to be constructed by Applicant and to render natural gas service to Applicant for distribution and resale, as hereinbefore described and as more fully set forth in the application, as hereinafter ordered and conditioned.

(4) The requirement that Respondent serve Applicant, as requested, will not place an undue burden upon Respondent nor impair its ability to render adequate service to existing customers.

The Commission orders:

(A) Respondent is directed to establish a physical connection of its natural gas transmission system with the facilities to be constructed by Applicant and render natural gas service to Applicant for distribution and resale, all as hereinbefore described and as more fully described in the application.

(B) Applicant shall be prepared to receive natural gas from Respondent at the proposed new connection within one year from the date of this order.

(C) Respondent shall notify the Commission of the commencement of service within 10 days thereof.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

CITIES SERVICE GAS COMPANY, DOCKET NO. CP63–188 (PHASE II)

ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND GRANTING FURTHER EXTENSION OF TIME

(Issued November 1, 1965)

On September 7, 1965, Cities Service Gas Company (Applicant) filed in Docket No. CP63–188 (Phase II) an application to amend * the Commission's order issued December 30, 1963, 30 FPC 1612, in said docket to authorize the construction and operation of a new 2,400 horsepower compressor station in its Webb Storage Field, Grant County, Oklahoma, all as more fully set forth in the application to amend.

The order of December 30, 1963, authorized Applicant to construct, operate and acquire certain facilities in order to develop and operate the Webb Storage Field. More specifically Applicant proposed to plug the old wells in the Webb field and drill, equip and connect some 40 new wells for storage injection and withdrawal. Applicant was also authorized to construct and operate a gathering system, a dehydration plant and a 26-inch pipeline to connect the proposed storage field to its Blackwell Compressor Station, which station Applicant intended to utilize for the input and withdrawal operations.

---

* Applicant filed herein an application for a certificate of public convenience and necessity; however, said filing is being considered herein as an application to amend the Commission's order issued December 30, 1963, in Docket No. CP63–188 (Phase II).

Applicant now states that the horsepower which it had anticipated would become available at its Blackwell Compressor Station due to a decline of available volumes of gas requiring compression at Blackwell has not materialized and that the herein proposed compressor station is required in order to compress the volumes now scheduled to be injected and withdrawn from its new storage reservoir. Applicant further states that by installing the proposed compressor unit in the storage field area certain construction costs will be saved since it can utilize lighter weight pipe for the 26-inch injection and withdrawal line heretofore authorized in Docket No. CP63-188 (Phase II).

The application to amend shows that the total estimated cost of the proposed compressor station is $815,000; however, the use of lighter weight pipe for the 26-inch line will save Applicant $205,000 in estimated costs. Therefore, the estimated net cost of the proposed facilities is $610,000.

Applicant also requests that it be granted an extension of time to April 30, 1966, in which to complete the construction and acquisition heretofore authorized in Phase II of this docket and the construction of the facilities requested herein and to place all facilities in actual operation. The order of December 30, 1963, allowed Applicant until December 30, 1964, to complete its authorized construction and acquisition and to commence operations. Because of the difficulty in acquiring leasehold interests and storage rights, Applicant by order of October 15, 1964, was granted an extension of time to December 31, 1965. Applicant states that with the additional construction of the herein proposed compressor station, it anticipates that the Webb Storage project facilities will be completed and operations will commence by April 30, 1966. Accordingly, Applicant requests further extension of time to that date.

Due notice of the filing of the application to amend and opportunity for hearing thereon has been given by publication in the Federal Register on September 21, 1965, (30 F.R. 12052). No protest or petition to intervene has been filed in this proceeding.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order issued December 30, 1963, in Docket No. CP63-188 (Phase II) be amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order issued December 30, 1963, in Docket No. CP63-188 (Phase II) is amended as follows:

(1) To authorize the construction and operation of a new 2,400 horsepower compressor station in Applicant's Webb Storage Field; and,

(2) To extend to April 30, 1966, the time within which Applicant shall complete construction and acquisition of facilities and interests and place the subject storage project in operation.

(B) In all other respects said order shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

THE COLORADO RIVER WATER CONSERVATION DISTRICT, PROJECT NO. 2511

ORDER DENYING INTERVENTIONS

(Issued November 1, 1965)

Petitions to intervene in the above-entitled proceeding were filed on July 19, July 20, and July 27, 1965, respectively, by the City of Colorado Springs, Colorado, The City of Aurora, Colorado, and The New Jersey Zinc Company, a New Jersey Corporation. The first two petitions were supplemented by a joint additional filing of August 19, 1965, pursuant to the Commission's Acting Secretary's notice of extension of time within which to do so. An answer to the first two petitions was filed by The Colorado River Water Conservation District. The third petition was filed pursuant to the Commission's Secretary's notice of an extension of time within which to do so.

The first two petitioners assert, among other things, that Project No. 2511 purports to use water from Homestead Creek and the said use may interfere with or affect senior rights and claims of the petitioners. The third petitioner asserts, among other things, that it does not oppose the application for preliminary permit, but petitioner holds a Commission license for minor Project No. 1553 which enables petitioner to utilize water from Fall Creek, a stream which would be affected by Project No. 2511.

The above-entitled proceeding involves an application for preliminary permit filed on March 31, 1965, by The Colorado River Water Conservation District for preliminary permit for proposed Project No. 2511, to be known as the Red Cliff Project, to be located on the Eagle River and its tributaries, Homestake Creek, Peterson Creek and Fall Creek in Eagle County, Colorado, and will affect lands of the United States within the White River National Forest.

No construction is authorized under a preliminary permit. Such a permit gives the permittee the right of priority of application for license over other non-Federal entities, while the permittee undertakes the necessary studies and examinations required by Section 9 of the Federal Power Act in order to determine the economic feasibility of the proposed project, the means of securing the necessary financial arrangements for construction, the market for power, and all other information necessary for inclusion in an application for license, should one be applied for under the permit.

A preliminary permit under the Federal Power Act does not authorize the Permittee to interfere with any vested water rights of the Petitioners.

The Commission finds:

Petitioners have not shown good cause for the granting of their respective petitions.

The Commission orders:

The foregoing petitions seeking leave to intervene in this proceeding are hereby denied without prejudice to the right of the petitioners to again petition to intervene should an application for license for Project No. 2511 be filed.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

EMPIRE GAS AND FUEL COMPANY, DOCKET NO. CP66-31; CONSOLIDATED GAS SUPPLY CORPORATION, DOCKET NO. CP66-45

FINDINGS AND ORDER AFTER STATUTORY HEARING PERMITTING AND APPROVING ABANDONMENT, CANCELLING RATE SCHEDULE AND ACCEPTING SERVICE AGREEMENT FOR FILING

(Issued November 1, 1965)

On July 28, 1965, Empire Gas and Fuel Company (Empire), filed in Docket No. CP66-31 an application pursuant to Section 7(b) of the Natural Gas Act for permission and approval to abandon certain service to Iroquois Gas Corporation (Iroquois),[1] all as more fully set forth in the application on file with the Commission.

On August 10, 1965, Consolidated Gas Supply Corporation (Consolidated) filed in Docket No. CP66-45 an application pursuant to Section 7(b) of the Natural Gas Act for permission and approval to abandon its Kibbeville Measuring and Regulating facilities in Potter County, Pennsylvania, and its service to Empire, all as more fully set forth in the application.

Empire purchases natural gas from Consolidated,[2] pursuant to a service agreement dated June 8, 1955, and produces limited quantities of gas in northern Pennsylvania. The total supplies of natural gas available to Empire are delivered to Iroquois pursuant to a service agreement dated December 28, 1943, for the purchased gas, and pursuant to a contract dated December 9, 1932, for the produced gas. These sales for resale are made under Rate Schedules P-1 and L-1, respectively, to Empire's FPC Gas Tariff, Original Volume No. 1.

Iroquois and Consolidated have entered into a new service agreement dated April 23, 1965, which provides for the same service, among other things, as the service agreement of June 8, 1955, between Consolidated and Applicant.

Empire proposes to abandon its service to Iroquois incident to its Rate Schedule P-1 at the same time as Consolidated commences deliveries to Iroquois under the agreement of April 23, 1965. Empire states that no change in its facility operations is proposed.

Consolidated sells and delivers natural gas to Empire at the Kibbeville connection pursuant to a service agreement dated June 8, 1955. The gas is resold by Empire to Iroquois for distribution to consumers. Consolidated also renders natural gas service to Iroquois under three service agreements dated June 15, 1953, April 17, 1961, and March 9, 1962.

Empire and Iroquois have advised Consolidated of their desire to have Consolidated deliver the gas which it is now delivering to Empire at the Kibbeville connection directly to Iroquois at existing delivery points in the State of New York, primarily at the Donovan Connection in Allegany County, New York.

On August 24, 1965, Consolidated filed with the Commission a new Service Agreement with Iroquois dated April 23, 1965, which supersedes the existing service agreements between them wherein the sales and service now being rendered directly to Iroquois under three Service Agreements and indirectly

[1] Formerly Empire Gas and Fuel Company, Limited.
[2] Formerly New York State Natural Gas Corporation.

under the Empire Agreement will, upon receiving authorization for the subject applications, be rendered under one Service Agreement, thereby making available to Iroquois conjunctive billing under a block rate. The net effect of such billing, assuming that the new service had been in effect for the twelve months ending September 1965, would be a net reduction in cost to Iroquois of $39,154.

Consolidated requests all necessary waivers of the Rules in order that the new Service Agreement be made effective concurrently with its abandonment of service to Empire, and with Empire's abandonment of service to Iroquois as proposed in the subject applications.

The proposed shift in delivery of up to 4,166 Mcf per day has no significant operational effect.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the applications have been filed.

At a hearing held on October 28, 1965, the Commission on its own motion received and made a part of the record in these proceedings all evidence including the applications and exhibits, submitted in support of the authorizations sought, and upon consideration of the record,

The Commission finds:

(1) Applicant, Empire Gas and Fuel Company, a Pennsylvania corporation having its principal place of business in Buffalo, New York, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of June 1, 1943, in Docket No. G-300 (3 FPC 1013).

(2) Applicant, Consolidated Gas Supply Corporation, a West Virginia corporation with its principal place of business in Clarksburg, West Virginia, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order issued February 2, 1965, (33 FPC 150).

(3) The service in Docket No. CP66-31 and facilities and service in Docket No. CP66-45 proposed to be abandoned, as hereinbefore described and as more fully described in the applications herein, are subject to the jurisdiction of the Commission, and such abandonments are subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(4) The proposed abandonment of service and of the aforesaid facilities are permitted by the public convenience and necessity and approval therefor should be granted as hereinafter ordered.

(5) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require (a) that Consolidated's Service Agreement with Iroquois dated April 23, 1965, be accepted for filing and (b) Empire's Rate Schedule P-1 be cancelled, and that the said acceptance and cancellation be effective on the date of the issuance of this order.

The Commission orders:

(A) Permission for and approval of the abandonment of service as requested by Empire in Docket No. CP66-31 and of facilities and service as requested by Consolidated in Docket No. CP66-45, hereinbefore described and as more fully described in the respective applications filed in these proceedings, are granted.

(B) Empire and Consolidated shall advise the Commission of the date of abandonment of service and of facilities as authorized in paragraph (A) above within ten days of such abandonment.

(C) The Service Agreement between Consolidated and Iroquois dated April 23, 1965, be accepted for filing, and Empire's Rate Schedule P-1 be cancelled, effective on the date of the issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

KANSAS-NEBRASKA NATURAL GAS COMPANY, INC., DOCKET NO. CP66-57

FINDINGS AND ORDER AFTER STATUTORY HEARING PERMITTING AND APPROVING ABANDONMENT OF FACILITIES

(Issued November 1, 1965)

On August 23, 1965, Kansas-Nebraska Natural Gas Company, Inc., (Applicant) filed in Docket No. CP66-57 an application pursuant to Section 7(b) of the Natural Gas Act for permission and approval to abandon six small compressor units totaling 1,710 horsepower at its Casper, Wyoming, Compressor Station, as more fully set forth in the application.

Applicant acquired ownership of the six units by merger with North Central Gas Company, as authorized by the Commission in its order of December 20, 1962, 28 FPC 1079, in Docket No. CP63-89. Applicant subsequently installed three 1,000 horsepower compressor units, two of which were authorized by our order issued November 17, 1964 ,in Docket No. CP64-315, 32 FPC 1324, and a third by our order issued July 2, 1963, in Docket No. CP63-265, 30 FPC 17. The installation of these units, coupled with an increase in the inlet pressure, caused the discharge pressure to rise to 800 psig. The six small units have a maximum discharge limitation of 400 psig and therefore cannot be utilized at the higher operating pressures.

Applicant states that the six small units have not been considered as available horsepower for system operations, and it is impractical to recylinder them. It is therefore more efficient and economical to remove and salvage the units, thereby enabling utilization of the buildings and space for necessary parts and material storage.

Due notice of the filing of the application was published in the Federal Register on September 4, 1965 (30 F.R. 11358). No petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on October 28, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Kansas-Nebraska Natural Gas Company, Inc., a Kansas corporation having its principal place of business in Hastings, Nebraska, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of April 6, 1943, in Docket No. G-259 (3 FPC 966).

(2) The facilities to be abandoned, as hereinbefore described and as more fully described in the application in this proceeding, are subject to the jurisdiction of the Commission and abandonment of such facilities by Applicant is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(3) Such abandonment, as hereinbefore described and as more fully described in the application in this proceeding, is permitted by the public convenience and necessity and an order approving same should be issued as hereinafter ordered.

The Commission orders:

(A) Permission for and approval of the abandonment by Kansas-Nebraska Natural Gas Company, Inc., of the facilities hereinbefore described, as more fully described in the application in this proceeding, are granted.

(B) Applicant shall advise the Commission of the date of abandonment of the facilities within 10 days thereafter.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

SIERRA PACIFIC POWER COMPANY, PROJECT NOS. 743, 958, 959, 978, 982 AND 1037

ORDER ACCEPTING SURRENDER OF LICENSES (TRANSMISSION LINE)

(Issued November 1, 1965)

On June 25, 1965, Sierra Pacific Power Company, licensee for the above-designated transmission line projects, filed under Section 6 of the Federal Power Act for surrender of its licenses for these projects occupying lands of the United States within the States of California and Nevada.

This application was filed pursuant to the Commission's March 29, 1965, 33 FPC 652, order approving transfer of some ten transmission line licenses, including the six licenses involved herein, from the Sierra Pacific Power Company to Sierra Nevada Power Company, the latter presently being known as Sierra Pacific Power Company. In its order of March 29, 1965, the Commission stated that according to a staff study all the transmission lines designated in the order are distribution lines, not primary lines or parts of a "project" as defined in Section 3(11) of the Federal Power Act, and that its approval of transfer of the licenses was subject to the requirement that the transferee obtain authority from the appropriate Government agency having supervision of the Government lands involved, and then apply for surrender of its licenses for the lines herein involved.

The Land Office, Bureau of Land Management, Department of the Interior, Reno, Nevada, is the supervisor of lands of the United States occupied by the lines and has advised that the permits for the continued occupancy of Government lands by these lines will be issued as of the date of surrender of the licenses.

The Commission finds:

(1) The subject transmission lines are neither primary lines nor part of a "project" as defined in Section 3(11) of the Federal Power Act.

(2) Public notice of the application has been waived in each of the licenses.

The Commission orders:

Surrender of the licenses for transmission line Project Nos. 743, 958, 959, 978, 982, and 1037 are accepted, effective as of June 30, 1965, subject to the payment of annual charges within 30 days from the date of issuance of this

order in the amount of $110.98 for the period January 1, 1965, through June 30, 1965, as follows:

Project No. 743:	
Land charges	$53.30
Administrative charge	2.48
	55.78
Project No. 958—Land charges	2.48
Project No. 959—Land charges	4.04
Project No. 978—Land charges	27.75
Project No. 982—Land charges	6.40
Project No. 1037—Land charges	14.53
Total charge	110.98

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

T. L. JAMES & COMPANY, INC., ET AL., DOCKET NO. G–16492, ET AL.; AUSTRAL OIL COMPANY INCORPORATED, DOCKET NO. G–20289

ORDER DENYING MOTION TO SEVER AND TO DEFER FURTHER ACTION

(Issued November 1, 1965)

Austral Oil Company Incorporated (Austral) by motion filed herein on September 27, 1965, requests that the Commission sever Docket No. G–20289[1] from the consolidated proceedings in Docket No. G–16492, *et al.*, and defer taking further action with respect to the proceedings in said Docket No. G–20289 pending the outcome of an action filed by Austral in the Civil District Court for Orleans Parish, Louisiana, in case docket No. 440–193.

In support of its motion, Austral states (1) that the said civil action, filed September 1965, was instituted to resolve the tax reimbursement controversy with its purchaser, Trunkline Gas Company (Trunkline), which is the subject of the Commission's proceeding; (2) cites the Commission's order issued October 9, 1964 in *Pan American Petroleum Corporation, et al.*, Docket No. RI63–481, *et al.*, 32 FPC 966, which deferred action pending a state court determination of the controversy concerning the New Mexico Oil & Gas Emergency Tax, and *Leiter Minerals, Inc.* v. *U.S.*, 352 U.S. 220; (3) and suggests that the Commission also defer action in *Nicklos Oil & Gas Company (Operator), et al.*, Docket No. G–20290, and *Pan American Petroleum Corporation*, Docket No. G–20288, which likewise involve tax reimbursement controversies with Trunkline under contracts, of approximately the same date, containing tax reimbursement clauses which are identical to the tax reimbursement clause in Austral's contract.

An answer in opposition to Austral's motion was timely filed by Trunkline on October 8, 1965. In its answer, Trunkline states that Austral waited almost six years since the rate schedule involved in Docket No. G–20289 was suspended, because of questionable interpretation of the contract provision, to

[1] Austral's FPC Gas Rate Schedule No. 13, containing its contract dated July 18, 1958 with Trunkline, which is the document involved in the tax reimbursement controversy, was suspended in Docket No. G–20289 by Commission order issued December 23, 1959.

bring a suit in a state court of Louisiana. Trunkline points out that the subject state suit was initiated after a prehearing conference set by this Commission to determine the same matters which Austral presented to the state court. Austral filed its reply on October 18, 1965.

Referring to the aforementioned citations of Austral, Trunkline contends that such citations are inapposite to the motion for deferral as they involve proceedings in which the construction of a state statute was involved and a pending proceeding was delayed to permit the parties to secure a state interpretation of the applicable state statutes, whereas Trunkline states that it agrees with Austral's recitation and summarization of the pertinent Louisiana statutes. Trunkline further contends, among other things, that it is clear the controversy in this proceeding arises, not from differing interpretations of the Louisiana statutes, but rather from differing interpretations of the contract between the parties.

In our order issued October 9, 1964 deferring action in the aforementioned *Pan American* case, Docket No. RI63-481, *et al.*, we indicated the timely action taken in seeking resolution of the tax problems in a state court in that proceeding; and, although noting our power to decide the contractual question presented, we exercised our discretionary power by deferring action in the said docketed matter pending the state court action. However, in our order issued July 22, 1965 setting for hearing the instant proceedings in Docket No. G-16492, *et al.*, we noted that no legal action in either state or federal courts had been instituted.

We believe that it not be appropriate at this late date to defer action herein in view of the unreasonable lapse in time between the commencement of this proceeding and the institution of court action by Austral.

The Commission finds:

For the aforegoing reasons, good cause exist for denying Austral's motion filed here on September 27, 1965.

The Commission orders:

Austral's motion filed herein on September 27, 1965 is denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

COLUMBIA RIVER BASIN, HEADWATER BENEFITS INVESTIGATION, DOCKET NO. E-6384

ORDER DISMISSING PARTY ON REHEARING

(Issued November 2, 1965)

On April 30, 1965, 33 FPC 907, the Commission issued an order under Section 10(f) of the Federal Power Act (16 U.S.C. 803(f)) determining payments to the United States as a result of benefits provided by Federal headwater improvements in the Columbia River basin to non-Federal downstream hydroelectric developments during the period of January 1, 1957, through August 31, 1961. The order required that Public Utility District No. 1 of Chelan County (Chelan) pay $145,000 as a result of benefits received at its Rock Island development, Project No. 943, from the United States' Hungry Horse, Albeni Falls, and Grand Coulee headwater improvements.[1] The order also

[1] Chelan was required to pay $600 for the cost of the determination.

required four other owners of downstream projects to pay a total of $632,300 as a result of headwater benefits. These payments were fixed according to Section 11.27(b) of the Regulations under the Federal Power Act.

The Secretary of the Interior on May 28, 1965, filed an application for rehearing and a request for hearing, and the Commission on June 22, 1965, granted the application. He seeks on rehearing to establish that the payments should be fixed according to Section 11.27(a) of the Regulations because the owners of the downstream projects had additional generating capabilities based on assured release of Federal storage. While the total payments to the United States computed under Section 11.27(a) would be greater than those determined in the order of April 30, 1965, the payments by Chelan would be less. Chelan, as well as the other owners of downstream projects, paid under protest the payments determined in the order of April 30, 1965.

Chelan filed a motion on September 20, 1965, to have the Commission enter a final order fixing its payments as prescribed in the order of April 30, 1965.[2] It requests that, if this motion is granted, it be dismissed from the proceeding on rehearing. Chelan states that the cost of participating in the proceeding would equal or exceed the reduction in payments by it which would result if the Secretary's contentions were established. By letter of October 11, 1965, the Department of the Interior stated that it does not oppose Chelan's motion.

The Commission further finds:

It is appropriate and in the public interest in administering Part I of the Federal Power Act that the order of April 30, 1965, be made final as to Public Utility District No. 1 of Chelan County and that the District be dismissed from the proceeding on rehearing of this order.

The Commission orders:

The order of April 30, 1965, is hereby made final as to Public Utility District No. 1 of Chelan County, and the District is hereby dismissed from the proceeding on rehearing of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

LACLEDE GAS COMPANY, DOCKET NO. CP66-11

DECLARATION OF EXEMPTION

(Issued November 2, 1965)

Laclede Gas Company (Applicant) filed on July 13, 1965, an application, as supplemented on August 30, 1965, for exemption, with respect to an anticipated sale of natural gas to St. Charles Gas Corp. (St. Charles) for resale, from the provisions of the Natural Gas Act, pursuant to Section 1(c) thereof.

Applicant is a Missouri corporation engaged in the sale and distribution of natural gas in the State of Missouri. Pursuant to certificate authorization granted by the Commission, Mississippi River Transmission Corporation (Transmission) (formerly Mississippi River Fuel Corporation) sells and delivers to Applicant natural gas for resale in Missouri.

---

[2] The motion was joined in by Puget Sound Power & Light Company, which is licensee for a transmission line from Chelan's Rock Island project. Since this company does not provide downstream power benefits and the order of April 30, 1965, does not require it to make any headwater benefits payments, it is not a party to the proceeding.

Applicant has received authorization from The Public Service Commission of the State of Missouri to acquire from St. Charles approximately 20 miles of transmission pipeline located in St. Louis and St. Charles Counties, Missouri, and to sell natural gas by means of said line to St. Charles for resale and ultimate consumption within the State of Missouri. The sale of gas to St. Charles will commence upon the completion of the abandonments, authorized by this Commission in its order, issued November 2, 1965, *infra*, p. 1220, in Docket Nos. CP65-385 and CP65-388, and upon the initiation of the sale of gas by Transmission to Applicant for resale to St. Charles.

All natural gas received by Applicant for transportation, sale for resale and distribution through its system is or will be consumed ultimately within the State of Missouri, and all of its said facilities are or will be located within said State.

The Public Service Commission of the State of Missouri has certified to the Federal Power Commission that it has and will be exercising regulatory jurisdiction over the rates, service and facilities of Applicant.

Wherefore, the Commission declares, by reason of the foregoing:

Laclede Gas Company, is exempt from the provisions of the Natural Gas Act, and the orders, rules and regulations of this Commission issued thereunder.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

LANDS WITHDRAWN IN POWER SITE RESERVE NO. 268 AND PROJECT NO. 334, DOCKET NO. DA-1058-CALIFORNIA, SACRAMENTO STATE COLLEGE FOUNDATION

ORDER DENYING APPLICATION FOR DETERMINATION UNDER SECTION 24 OF THE FEDERAL POWER ACT

(Issued November 2, 1965)

Application (Sacramento 079322) was filed by Sacramento State College Foundation (Applicant), of Sacramento, California, for a determination under Section 24 of the Federal Power Act pertaining to the following described lands of the United States withdrawn for power purposes:

Mount Diablo Meridian, California

T. 12 N., R. 8 E., section 12, S½SW¼

Applicant desires to acquire the lands under the Act of June 14, 1926 (44 Stat. 791) for development as a field campus for use by various departments of Sacramento State College.

The lands were withdrawn on August 2, 1922 pursuant to the filing of an application for preliminary permit for Project No. 334. While the application was rejected by the Commission, the withdrawal pertaining to the lands (as shown on notice of land withdrawal dated October 18, 1922) remains outstanding. The SW¼SW¼, section 12, is also withdrawn in Power Site Reserve No. 268 of April 29, 1912.

The lands are located near the left bank of the North Fork of the American River south of its confluence with the Middle Fork in the vicinity of the Town of Auburn, California.

The lands are valuable for power development in that they will be used in connection with the construction by the Bureau of Reclamation of the proposed

multiple-purpose Auburn-Folsom South Unit project on the North Fork American River for power and other purposes, the dam of which will be located about two miles downstream from the lands. This project was authorized by Public Law 89-161 approved September 2, 1965.

The Commission finds:

The subject lands are valuable for power purposes.

The Commission orders:

The aforesaid application is hereby denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

MISSISSIPPI RIVER TRANSMISSION CORPORATION, DOCKET NO. CP65-385; ST. CHARLES GAS CORP., DOCKET NO. CP65-388

FINDINGS AND ORDER AFTER STATUTORY HEARING PERMITTING AND APPROVING ABANDONMENT OF FACILITIES AND SALE OF NATURAL GAS

(Issued November 2, 1965)

On June 2, 1965, Mississippi River Transmission Corporation (Transmission) and on June 3, 1965, as supplemented on August 3 and September 7, 1965, St. Charles Gas Corp. (St. Charles) filed in Docket Nos. CP65-385 and CP65-388, respectively, applications pursuant to Section 7(b) of the Natural Gas Act for permission and approval to abandon certain natural gas service and facilities, all as more fully set forth in the respective applications in these proceedings.

Transmission currently sells a maximum volume of 4,271 Mcf of gas per day to St. Charles. In Docket No. CP65-385, Transmission proposes to abandon such sale and the metering, regulating and appurtenant facilities at a related delivery point in Hartford, Illinois. Transmission then proposes to sell and deliver up to 4,271 Mcf per day to Laclede Gas Company (Laclede) for resale to St. Charles. In effect Transmission is transferring the contract demand from St. Charles to Laclede.

In Docket No. CP65-388, St. Charles proposes to abandon in place the eastern portion of its pipeline which portion extends from Transmission's delivery point at Hartford, Illinois, under the Mississippi River, into the State of Missouri, terminating at Transmission's second delivery point, the East Line delivery point in St. Louis County, Missouri. St. Charles proposes to seal off this portion of its line and to separate it from the remainder of the line. The remainder of St. Charles' line, extending from the East Line delivery point to the City of St. Charles, will be sold to Laclede and will be utilized by the latter for the transportation and delivery of gas to St. Charles at a point in the City of St. Charles. Transmission will continue to utilize the East Line delivery point as an additional delivery point to Laclede.

Transmission, St. Charles and Laclede have entered into a tripartite agreement, dated May 19, 1965, providing for the subject proposals.

St. Charles states that its proposed abandonment will relieve it of the burden and expense of maintaining and operating a costly and unnecessary river crossing and transmission line, and, further that no increase in rates to St. Charles' customers will result from the proposal. Further, St. Charles states that the sale of its transmission line to Laclede and the attachment of such line to Laclede's distribution system will effectively convert the use

of such line from that of a straight, point-to-point transmission line to a potentially integral part of the Laclede distribution system, providing additional operating flexibility and efficiency on the Laclede system.

St. Charles states that it is engaged in the business of selling and distributing natural gas in the City of St. Charles, Missouri, and environs, and in the County of St. Charles, Missouri. St. Charles requests in Docket No. CP65-388 that, upon the completion of the proposed abandonment, it be declared exempt from the provisions of the Natural Gas Act. In Docket No. CP66-11, Laclede states that it distributes natural gas at retail solely within the State of Missouri and requests in said docket that it be declared exempt from the provisions of the Natural Gas Act insofar as the same may be deemed to apply to Laclede's expected sale of natural gas to St. Charles for resale. The requested declarations of exemption by separate orders will be issued simultaneously with the subject order.

By order issued July 30, 1965, the Public Service Commission of Missouri authorized the sale of St. Charles' pipeline and the sale of natural gas by Laclede to St. Charles.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the applications have been filed.

At a hearing held on October 28, 1965, the Commission on its own motion received and made a part of the record in these proceedings all evidence, including the applications, supplements and exhibits, submitted in support of the authorizations sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Mississippi River Transmission Corporation, a Delaware corporation having its principal place of business in St. Louis, Missouri, and Applicant, St. Charles Gas Corp., a Missouri corporation having its principal place of business in St. Charles, Missouri, each is a "natural-gas company" as heretofore found by the Commission.

(2) The facilities and sale of natural gas to be abandoned in these proceedings, as hereinbefore described, are subject to the jurisdiction of the Commission, and the abandonment of such facilities and sale is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(3) Such abandonment by Transmission and St. Charles, as hereinbefore described, is permitted by the public convenience and necessity and should be approved as hereinafter ordered.

The Commission orders:

(A) Permission for and approval of the abandonment of facilities and sale of natural gas by Transmission and of facilities by St. Charles hereinbefore described, all as more fully described in the applications, as supplemented, in these proceedings, are granted.

(B) Applicants shall advise the Commission of the date of the respective abandonments within 10 days of the date thereof.

(C) Transmission shall file with the Commission a notice of cancellation of its service agreement with St. Charles.

(D) Transmission shall tender for filing with the Commission a new service agreement with Laclede increasing the contract demand by 4,271 Mcf and providing for the new East Line delivery point for Laclede.

(E) Transmission shall tender for filing with the Commission a Revised Sheet No. 33 and a Revised Sheet No. 34 to its FPC Gas Tariff, First Revised Volume No. 1, reflecting the above changes.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

NATURAL GAS PIPELINE COMPANY OF AMERICA, DOCKET NO. CP66-74

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued November 2, 1965)

On September 15, 1965, Natural Gas Pipeline Company of America (Applicant), filed in Docket No. CP66-74 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the sale and delivery of an additional Daily Contract Quantity of 1,000 Mcf to Central Illinois Electric and Gas Company (Central Illinois), an existing customer of Applicant, all as more fully set forth in the application.

Central Illinois by letter dated August 23, 1965, requested Applicant to supply additional volumes of natural gas to meet its estimated peak day deficiency of 1,000 Mcf/D for the 1965-66 heating season. It appears Applicant has unallocated pipeline capacity in the amount of 30,171 Mcf. Central Illinois presently receives a Daily Contract Quantity of 84,500 Mcf/D under Rate Schedule CD-1 and a maximum day storage withdrawal volume of 28,897 Mcf under Rate Schedule S-1. The additional volumes proposed to be sold and delivered by Applicant to Central Illinois will be delivered at the existing Rockford meter station and used to serve its existing market area in Stephenson, Winnebago and Boone Counties, Illinois. No additional facilities will be required to make the proposed additional deliveries of natural gas.

After due notice no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on October 28, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought, and upon consideration of the record,

The Commission finds:

(1) Applicant, Natural Gas Pipeline Company of America, a Delaware corporation having its principal place of business in Chicago, Illinois, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of November 7, 1958, in Docket No. G-9966 (20 FPC 694).

(2) The proposed sale and delivery of natural gas by Applicant to Central Illinois Electric and Gas Company as hereinbefore described, and as more fully described in the application, in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid proposed sale and delivery of natural gas is required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to Applicant, Natural Gas Pipeline Company of America, authorizing the sale and delivery of natural gas to Central Illinois Electric and Gas Company, as hereinbefore described and as more fully described in the application in this proceeding, upon the terms and conditions of this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(C) Applicant and Central Illinois Electric and Gas Company execute a superseding service agreement in accordance with the Commission's Regulations reflecting the increase in daily contract quantity of 1,000 Mcf, and file the same with the Commission within 30 days after the issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

PAN AMERICAN PETROLEUM CORPORATION (OPERATOR), ET AL., DOCKET NO. RI66-61 AND KERR-MCGEE OIL INDUSTRIES, INC., DOCKET NO. RI66-81

ORDER CONSOLIDATING PROCEEDINGS, PERMITTING INTERVENTION, AND SETTING CONTRACTUAL MATTERS FOR HEARING

(Issued November 2, 1965)

Pan American Petroleum Corporation (Operator), *et al.* (Pan American) on August 9, 1965, tendered for filing proposed revenue sharing increased rates of 11.7526¢ and 11.5961¢ per Mcf, which were designated as Supplement No. 21 to Pan American's FPC Gas Rate Schedule No. 57, for sales of gas to Phillips Petroleum Company (Phillips) from Texas Railroad Commission District No. 10 and the Oklahoma Panhandle area, respectively. By order issued September 8, 1965, in Docket No. RI66-61 the Commission suspended Pan American's proposed rates for one day from the proposed effective date of September 13, 1965, or for one day from the date that Phillips makes effective its related increased rate of 15.22¢, plus applicable tax reimbursement, which is suspended in Docket No. RI65-526,[1] whichever is later. The alternative suspension period was provided for because it appeared at the time that Pan American was not entitled as a contractual matter to place its proposed rates in effect until Phillips commenced collection of its suspended increased rate in Docket No. RI65-526.

Subsequent to the issuance of the suspension order herein, Phillips filed on September 10, 1965, a protest requesting that Pan American's proposed increased rates be rejected because under its interpretation of the contract there was no contractual basis for the filing made by Pan American. Pan American on September 27, 1965, filed an answer to Phillips' protest contesting Phillips' interpretation of the contract. Pan American contends that it is contractually entitled to the proposed rates because Phillips is "en-

[1] Phillips could make its increased rate in Docket No. RI65-526 effective but has not as yet seen fit to do so.

titled to receive" the higher rate suspended in Docket No. RI65–526 upon which Pan American's filing is based. Pan American therefore requests that the September 8 suspension order be revised to permit it to collect the proposed rates, subject to refund, as of September 14, 1965.

If we were to shorten the suspension period in Docket No. RI66–61, as Pan American has requested, Phillips would be forced either to place its increased rate of 15.22¢ per Mcf in effect subject to refund in Docket No. RI65–526 or to absorb Pan American's rate increase, which is estimated to amount to $266,621 annually. Under these circumstances, we conclude that Pan American's request for a shortened suspension period should be denied. However, in light of the interpretation placed on the contractual provisions by Pan American and Phillips' protest with respect thereto, it is appropriate to set these contractual matters for immediate hearing.

Phillips also protested on September 13, 1965, the proposed revenue sharing increased rate of 12.00273¢ designated as Supplement No. 20 to the Kerr-McGee Oil Industries Inc. (Kerr-McGee) FPC Gas Rate Schedule No. 12, for sales of gas by Kerr-McGee to Phillips from Texas Railroad Commission District No. 10.[2] The proposed rate was suspended by order issued September 29, 1965 in Docket No. RI66–81 for one day until Oct. 1, 1965, and thereafter until made effective as prescribed by the Natural Gas Act. Phillips contends that Kerr-McGee has improperly computed the rate to which it is entitled under the contract. Briefly, Kerr-McGee and Phillips differ as to which of Phillips' base prices for sales made to Michigan Wisconsin Pipe Line Company under its FPC Gas Rate Schedule No. 4 is applicable at this time in computing Kerr-McGee's contract rate. Kerr-McGee contends that Phillips' base rate of 8.84863¢ is applicable and that its base price should be increased by 165.72% which equals Phillips' increased rate 14.0635¢ (in effect subject to refund in Docket No. RI60–349) divided by Phillips' base price of 8.84863¢ X 100. Phillips contends that its base rate of 9.3796¢ is applicable to the computation and that Kerr-McGee's base price should be increased by 149.937% which equals Phillips' 14.0635¢ rate divided by Phillips' base price of 9.3796¢ X 100.

While the contractual disputes in Docket Nos. RI66–61 and RI66–81 are not the same, the two proceedings do involve the proper interpretation of similar contractual provisions. We therefore find it appropriate to consolidate these cases and to set the contractual matters involved here for immediate hearing, as hereinafter ordered. The justness and reasonableness of these rates, however, will be subject to determination in the appropriate area rate proceeding in the event and to the extent it is determined that there is contractual authorization for such filings.

Phillips in its protests also requested in the alternative that it be permitted to intervene in the above-entitled proceedings. Kerr-McGee does not object to Phillips' intervention, but Pan American asserts that such intervention is unnecessary. We conclude that the participation of Phillips in Docket Nos. RI66–61 and RI66–81 may be in the public interest.

It is not clear whether there might be some disagreement as to the facts involved here as well as to the proper legal interpretation of the facts. Accordingly, we shall provide for a prehearing conference at which the substantive matters to be resolved by formal hearing, if any, will be set forth, and all matters that can be resolved without formal trial will be eliminated from hearing and settled by stipulation.

---

[2] On September 29, Kerr-McGee filed an answer to Phillips' protest.

The Commission orders:

(A) Pursuant to the authority of the Natural Gas Act, particularly Sections 4, 5 and 16 thereof, the Commission's Rules of Practice and Procedure and the Regulations under the Natural Gas Act (18 CFR, Chapter I), the above-designated proceedings are consolidated for the purpose of hearing and a public hearing shall be held with respect to the contractual issues involved in these proceedings pursuant to the procedures prescribed herein.

(B) A presiding examiner to be hereinafter designated by the Chief Hearing Examiner shall preside at the prehearing conference and the hearing in the above-designated proceedings pursuant to the Commission's Rules of Practice and Procedure, and as further provided by this order.

(C) Pursuant to the provisions of Section 1.18 of the Commission's Rules of Practice and Procedure, a prehearing conference before the Presiding Examiner to be designated shall commence at 10:00 a.m. (EST) on November 16, 1965, in a hearing room of the Federal Power Commission, 441 G Street, N.W., Washington, D.C. for the purpose of effectuating the intent of the Commission as set forth in the body of this order.

(D) After the prehearing conference, the Presiding Examiner shall give notice of the date of hearing and shall prescribe such other procedures as he deems appropriate in the disposition of these matters.

(E) Phillips is permitted to intervene in the above-entitled proceedings, subject to the rules and regulations of the Commission: *Provided, however,* that the participation of Phillips shall be limited to matters affecting asserted rights and interests as specifically set forth in its petition to intervene; *and, Provided further,* that the admission of Phillips shall not be construed as recognition by the Commission that it might be aggrieved because of any order or orders of the Commission entered in these proceedings.

(F) Pan American's request for a shortened suspension period in Docket No. RI66-61 is denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

ST. CHARLES GAS CORP., DOCKET NO. CP65-388

DECLARATION OF EXEMPTION

(Issued November 2, 1965)

St. Charles Gas Corp. (Applicant) filed on June 3, 1965, an application, as supplemented on August 3 and September 7, 1965, for exemption from the provisions of the Natural Gas Act, pursuant to Section 1(c) thereof.

Applicant, a Missouri corporation, is engaged in the sale and distribution of natural gas in the State of Missouri and, pursuant to authorization of the Commission, has been transporting natural gas in interstate commerce between the States of Missouri and Illinois. Pursuant to certificate authorization granted by the Commission, Mississippi River Transmission Corporation (Transmission) (formerly Mississippi River Fuel Corporation) has been selling and delivering to Applicant natural gas for resale in Missouri.

Applicant has been and will continue to sell and distribute natural gas in the City of St. Charles, Missouri, and environs, and in the County of St. Charles, Missouri.

Upon the completion of the abandonment by Applicant of its pipeline between Illinois and Missouri and upon the abandonment by Transmission of

its sale of natural gas to Applicant, all authorized by Commission order, issued November 2, 1965, *supra*, p. 1220, in Docket Nos. CP65–385 and CP65–388, and upon the commencement of the sale of natural gas by Transmission to Laclede Gas Company (Laclede) for resale to Applicant, Applicant will receive all of its gas supply from Laclede in the State of Missouri and all of such gas will be received by Applicant for sale and distribution through its system for ultimate consumption within the State of Missouri and all of Applicant's facilities will be located within said state.

The Public Service Commission of the State of Missouri has certified to the Federal Power Commission that it has and will be exercising regulatory jurisdiction over the rates, service and facilities of Applicant.

Wherefore, the Commission declares, by reason of the foregoing:

St. Charles Gas Corp., upon the completion of the above-described abandonments and the commencement of the sale of natural gas by Transmission to Laclede for resale to Applicant, will be exempt from the provisions of the Natural Gas Act, and the orders, rules and regulations of this Commission issued thereunder.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

TRANSCONTINENTAL GAS PIPE LINE CORPORATION, DOCKET NO. CP66–67

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued November 2, 1965)

On August 30, 1965, Transcontinental Gas Pipe Line Corporation (Applicant) filed in Docket No. CP66–67 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain natural gas facilities, as more fully set forth in the application.

Applicant proposes to construct and operate a sales meter station and appurtenant equipment to be located at mile post 1222.67 on its 36-inch main transmission line "B" near Cowpens, Cherokee County, South Carolina. The meter station will be utilized as an additional point of delivery for natural gas service to Piedmont Natural Gas Company, Inc. (Piedmont), Applicant's existing resale customer.

Piedmont has requested the proposed delivery point to enable it to serve the South Carolina communities of Cowpens and Chesnee as well as three interruptible industrial customers. The estimated firm peak day volume in the third year of proposed operation of the facilities is 249 Mcf and the total estimated third year annual volume is 1,088,620 Mcf. Volumes purchased by Piedmont from Applicant at this point would be out of allocations previously authorized by the Commission.

The estimated cost of construction of the proposed facilities is $23,000, which will be financed from Applicant's general funds.

Due notice of the filing of the application was published in the Federal Register on September 11, 1965 (30 F.R. 11701). No protest, petition to intervene, or notice of intervention has been filed in this proceeding.

At a hearing held on October 28, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, in-

cluding the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Transcontinental Gas Pipe Line Corporation, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of April 28, 1950, in Docket No. G–1277 (9 FPC 32).

(2) The facilities hereinbefore described and as more fully described in the application in this proceeding are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of said Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to Applicant, Transcontinental Gas Pipe Line Corporation, authorizing the construction and operation of facilities as hereinbefore described and as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities authorized by this order shall be completed and placed in actual operation and the transportation of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within one year from the date of this order.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

ARIZONA PUBLIC SERVICE COMPANY, DOCKET NO. E–7225

ORDER AUTHORIZING TRANSMISSION OF ELECTRIC ENERGY TO MEXICO

(Issued November 3, 1965)

Arizona Public Service Company (Applicant), incorporated under the laws of the State of Arizona with its principal place of business at Phoenix, Ari-

zona, filed an application in the above docket on May 10, 1965, as supplemented and amended on June 9 and September 7, 1965, for authorization, pursuant to Section 202(e) of the Federal Power Act, to transmit electric energy from the United States to Mexico in an amount not to exceed 2,102,400 kwh per year at a rate of transmission not to exceed 400 kw. In addition, by a separate application filed in Docket No. E–7224 on May 10, 1965, as supplemented on June 9, 1965, Applicant requests permission, pursuant to Executive Order No. 10485, dated September 3, 1953, to construct, operate, maintain, and connect at the international border between the United States and Mexico certain facilities hereinafter described for the transmission of electric energy between the United States and Mexico, which permission is granted by a permit signed by the Acting Chairman of the Federal Power Commission on October 20, 1965 and issued as hereinafter provided.

The electric energy proposed to be transmitted to Mexico by Applicant will be sold by it to Comision Federal de Electricidad (Comision Federal), a department of the Republic of Mexico, for resale to consumers in the Town of Sonoyta, Sonora, Mexico, and vicinity. The energy purchased by Comision Federal from Applicant will supply all the electric requirements of the Town of Sonoyta. Applicant will charge Comision Federal for the energy purchased from Applicant the same rates as those charged to Applicant's electric service customers located in the United States in the area adjacent to the Town of Sonoyta. Such rates are set forth in Applicant's General Service Rate Schedule No. E–125, a copy of which was filed as an exhibit to the application in Docket No. E–7225. Applicant will deliver the exported energy to Comision Federal by means of a proposed three-phase open Y 12/21 kv transmission line consisting of three conductors of No. 4 copper wire crossing the International Boundary near Lot 4 of United States Customs Immigration Reserve at Lukeville, Arizona, which facilities are covered by and subject to a Permit signed by the Acting Chairman of the Federal Power Commission and referred to above.

Applicant will generate a portion of the electric energy which it proposes to export and will purchase the balance of such energy from Phelps Dodge Mining Company and United States Bureau of Reclamation, respectively.

Written notice of the application has been given to the Arizona Corporation Commission and to the Governor of that State. Notice of the application has also been given by publication in the Federal Register on May 25, 1965 (30 F.R. 7023), stating that any person desiring to be heard or to make any protest with reference to the application should, on or before June 4, 1965, file with the Federal Power Commission, Washington, D.C. 20426, a petition or protest in accordance with the Commission's Rules of Practice and Procedure (18 CFR 1.8 or 1.10). No petition or protest or request to be heard in opposition to the granting of the application has been received.

The Commission finds:

(1) The proposed transmission of electric energy from the United States to Mexico as limited herein and as hereinafter authorized will not impair the sufficiency of electric supply within the United States and will not impede or tend to impede the coordination in the public interest of facilities subject to the jurisdiction of the Commission.

(2) The period of public notice given in this matter is reasonable.

The Commission orders:

(A) Applicant is hereby authorized to transmit electric energy from the United States to Mexico in accordance with the terms and conditions set forth in the application and subject to the provisions of this order.

(B) The electric energy which applicant is hereby authorized to transmit from the United States to Mexico shall be in an amount not to exceed 2,102,400 kwh per year at a transmission rate not to exceed 400 kw; the energy to be transmitted over facilities specified in the aforementioned Permit signed by the Acting Chairman of the Federal Power Commission on October 20, 1965, in Docket No. E-7224.

(C) The authorization herein granted may be modified from time to time or terminated by further order of the Commission, but in no event shall such authorization extend beyond the date of the termination or expiration of the Permit signed by the Acting Chairman of the Federal Power Commission, referred to in Paragraph (B) above.

(D) Applicant shall conduct all operations pursuant to the authorization herein granted in accordance with the provisions of the Federal Power Act and pertinent rules, regulations or orders issued by the Commission.

(E) Applicant shall provide for the installation and maintenance of adequate metering equipment to measure the flow of all electric energy transmitted from the United States to Mexico pursuant to the authority herein granted; shall make, keep and preserve full and complete records with respect to the movement of such energy; and shall furnish, in triplicate, to the Commission, with respect to such transmission of electric energy, reports annually on or before February 15, showing the kwh of energy delivered, the maximum kw of transmission, and the consideration received therefor during each month of the preceding calendar year.

(F) This authorization to transmit electric energy from the United States to Mexico shall not be transferable or assignable, but in the event of the involuntary transfer of the facilities used for such transmission by operation of law (including such transfers to receivers, trustees, or purchasers under foreclosure or judicial sale) said authorization shall continue in effect temporarily for a reasonable time thereafter, pending the making of an application for permanent authorization and decision thereon, provided notice is promptly given in writing to the Commission accompanied by a statement that the physical facts relating to sufficiency of supply, rates, and nature of use remain substantially the same as before the transfer.

(G) This authorization shall be without prejudice to the authority of any State or State regulatory commission for the exercise of any lawful authority vested in the State or State regulatory commission over Applicant.

(H) This authorization is without prejudice to the authority of this Commission, or any other regulatory body, with respect to rates, service, accounts, valuation, estimates or determinations of cost, or any other matter whatsoever now pending or which may come before this Commission, or any other regulatory body, and nothing herein shall be construed as an acquiescence by this Commission in any estimate or determination of cost or any valuation of property claimed or asserted.

(I) Concurrently with the issuance of this order, the Permit signed by the Acting Chairman of the Federal Power Commission, referred to in Paragraph (B) above, shall be issued and a copy thereof transmitted by the Secretary to Applicant.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP65-242

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued November 3, 1965)

On February 17, 1965, El Paso Natural Gas Company (Applicant) filed in Docket No. CP65-242 an application, as supplemented on February 24 and September 20, 1965, pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain natural gas facilities and the sale and delivery of natural gas, on a firm and interruptible basis, to Northwest Natural Gas Company (Northwest Natural) for transportation to and resale and general distribution in the communities of Deer Island, Prescott, Rainier, Clatskanie, Wauna, Astoria, Gearhart and Seaside, Oregon, their respective environs and adjacent and intervening areas, all as more fully set forth in the application, as supplemented.

Specifically, Applicant proposes to construct and operate: (1) approximately 4.63 miles of combination 16-inch and 12¾-inch pipeline, and necessary appurtenances, extending from a point of connection with Applicant's 26-inch mainline in Cowlitz County, Washington, to a point of connection with Northwest Natural's proposed pipeline in Columbia County, Oregon, and (2) a dual 8⅝-inch orifice-type measuring and regulating station and necessary appurtenances. Applicant states that the .85 mile 16-inch portion of its proposed line will be a submerged crossing of the Columbia River.

The application shows that the total estimated third year annual and peak day requirements of Northwest Natural for its proposed project are 9,082,736 Mcf and 35,208 Mcf, respectively.

The total estimated cost of Applicant's facilities is $1,270,000, which cost will be financed from current working funds. Based on third year estimates shown in Exhibit N of the subject application, Applicant will receive annual revenues of $2,912,103 from the proposed sale to Northwest Natural. Incremental cost of service to Applicant, including return at 6.125 percent, is estimated at $1,614,978.

By letter, dated February 25, 1965, Applicant was issued a temporary certificate authorizing the proposed facilities and service. The facilities were constructed and the service is being rendered under such authorization.

The application indicates further that Northwest Natural will construct approximately 70 miles of 6 to 10-inch transmission pipeline from Applicant's proposed facilities in Oregon to the Oregon coast near Seaside and the necessary distribution systems for the proposed service.

On March 17, 1965, the Public Utility Commissioner of Oregon filed a notice of intervention in support of the subject application.

After due notice, no petition to intervene, other notice of intervention or protest to the granting of the application has been filed.

At a hearing held on October 28, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application, supplements and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, El Paso Natural Gas Company, a Delaware corporation having its principal place of business in El Paso, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of January 11, 1944, in Docket No. G–288 (4 FPC 486).

(2) The facilities hereinbefore described, as more fully described in the application, as supplemented, in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof and the proposed transportation and sale of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the proposed transportation and sale of natural gas by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued authorizing Applicant, El Paso Natural Gas Company, to construct and operate the proposed facilities and to sell and deliver natural gas as hereinbefore described, all as more fully described in the application, as supplemented, in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities authorized shall be constructed and placed in actual operation and the sale and delivery of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within six months from the date on which this order issues.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

HARRELL DRILLING COMPANY, DOCKET NO. G–17074

ORDER REJECTING OFFER OF SETTLEMENT

(Issued November 3, 1965)

On July 26, 1965, Harrell Drilling Company (Harrell) submitted an offer of settlement in this proceeding pursuant to Section 1.18(e) of the Com-

mission's Rules of Practice and Procedure. This proceeding involves a proposed increased rate from 13.49751¢ to 16.16974¢ per Mcf at 14.65 psia for the sale of natural gas by Harrell to the Tennessee Gas Transmission Company (TGT) in the Magnet-Withers Field, Wharton County, Texas (Texas Railroad Commission District No. 3) which was suspended by order of the Commission, and upon a duly filed motion was made effective by Harrell on July 6, 1959, and is presently being collected subject to refund. The sale is made under Harrell's FPC Gas Rate Schedule No. 1.

In its offer, Harrell proposes a settlement rate of 15.0¢ per Mcf of natural gas at 14.65 psia, and to eliminate the price redetermination and favored-nation clauses from the subject rate schedule. It reserves only the right to file for three-fourths reimbursement of any possible tax increase until the contract expires in August, 1975. However, in lieu of refunding monies collected subject to refund in excess of the proposed settlement rate, Harrell proposes to invest such monies in a drilling program to develop additional reserves on a presently undetermined site which, if possible, may be located near a TGT transmission line. Subject to TGT's approval, Harrell would enter into a joint venture with TGT in such a drilling program. TGT has filed no comment to Harrell's proposal. We do not find Harrell's proposal to be in the public interest. Therefore, we shall reject the offer of settlement filed by Harrell herein.

The Commission finds:

It is necessary and proper in carrying out the provisions of the Natural Gas Act and the Regulations thereunder to reject the offer of settlement filed by Harrell with the Commission on July 26, 1965, in this proceeding.

The Commission orders:

The offer of settlement filed by Harrell on July 26, 1965, in this proceeding is rejected.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

PHELPS DODGE CORPORATION, PROJECT NO. 2304

ORDER APPROVING REVISED PROJECT EXHIBITS

(Issued November 3, 1965)

On December 9, 1964, Phelps Dodge Corporation, licensee for Project No. 2304, filed for Commission approval revised Exhibits K, L and R drawings. The project, known as the Blue Ridge Project, is located on East Clear Creek, a tributary of Little Colorado River, and on East Verde River in Coconino and Gila Counties, Arizona, and affects lands of the United States within the Coconino and Tonto National Forests.

Revised Exhibits K and L drawings show a change in the pumping plant site with a resultant change in the pipeline and transmission line rights-of-way. The revised exhibits also show the Blue Ridge dam and spillway "as built" which differ only slightly than as originally contemplated. Revised Exhibit K (FPC No. 2304–16 and –17) shows the relocation of the project works, which are all on National Forest lands.

Inasmuch as Article 37 of the license does not require the licensee to file revised F and K exhibits showing the lands of the United States occupied by

the project until one year from the date of completion of the project, we are deferring until a later date a determination of National Forest lands occupied by the project and the amount of annual charges for such occupancy.

While revised Exhibit R (FPC No. 2304-24) shows the proposed recreational areas in relation to the location of the project works, the licensee has been requested to file supplemental information as a part of the exhibit. In the circumstances, we are deferring further consideration of the exhibit until a later date.

The Chief, Forest Service, acting for the Secretary of Agriculture, who has supervision over the Coconino and Tonto National Forests, has advised that Commission approval of the revised exhibits will not interfere or be inconsistent with the purposes for which the said National Forests were created or acquired.

The Commission finds:

The following described revised Exhibit K and L drawings conform to the Commission's rules and regulations and should be approved as part of the license for the project, and the exhibits described herein as being superseded should be eliminated from the license for the project:

Exhibit K—sheet 1 (FPC No. 2304-16) entitled "Detail Map of Project Area" superseding Exhibit K—sheet 1 (FPC No. 2304-3), sheet 2 (FPC No. 2304-17) entitled "Location of Pipeline".

Exhibit L—sheet 1 (FPC No. 2304-18) entitled "Arch Dam and Spillway, General Plan" superseding Exhibit L—sheet 1 (FPC No. 2304-13), sheet 3 (FPC No. 2304-19) entitled "Arch Dam and Buttresses, Typical Sections" superseding Exhibit L—sheet 3 (FPC No. 2304-14), sheet 5 (FPC No. 2304-20) entitled "Spillway from Reservoir" superseding Exhibit L sheet 5 (FPC No. 2304-15), sheet 6 (FPC No. 2304-21) entitled "Pumping Plant" superseding Exhibit L—sheet 6 (FPC No. 2304-10), sheet 7 (FPC No. 2304-22) entitled "Pipeline and Penstock Profile and Details" superseding Exhibit L—sheet 7 (FPC No. 2304-11), and sheet 8 (FPC No. 2304-23) entitled "Power Generation Station" superseding Exhibit L—sheet 8 (FPC No. 2304-12).

The Commission orders:

The revised Exhibit K and L drawings described in the above finding are hereby approved as part of the license for Project No. 2304, and the exhibits described in the same finding as being superseded are hereby eliminated from the license for the project.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

SHARPLES AND COMPANY PROPERTIES (OPERATOR), ET AL., DOCKET NO. G-14624[1]

ORDER ACCEPTING INCREASED RATE FILING, SEVERING AND TERMINATING PROCEEDING

(Issued November 3, 1965)

Sharples and Company Properties (Operator), *et al.*, (Sharples) a producer-respondent in the Permian Basin Opinion No. 468, 34 FPC 159, has filed a

[1] The above-designated proceeding was consolidated with the Area Rate Proceeding in Docket No. AR61-1, *et al.*

motion to place a suspended rate of 17.2295¢ per Mcf "partially into effect". Sharples wants the rate of 14.5¢ per Mcf (Permian Basin Area Rate) to be effective. The motion is being treated as a "fractured" rate increase from 10.096¢ to 14.5¢ per Mcf, amounting to $317 annually. The rate filing pertains to residue gas derived from casinghead gas sold to El Paso Natural Gas Company in the Permian Basin Area of Texas as set forth in Appendix "A" hereof.

On February 8, 1960, Sharples filed a renegotiated rate increase from 10.0¢ to 17.1632¢ per Mcf which was suspended in Docket No. G–14624. The renegotiated rate was subsequently corrected to 17.2295¢ per Mcf to reflect the proper amount of tax reimbursement. The suspended rate has not been placed into effect. The rate increase involved is applicable to a so-called Spraberry contract dated August 28, 1963, in which the casinghead gas is processed in buyer's Midkiff plant. The buyer pays Sharples a fixed rate for the residue gas, plus a percentage of the extracted liquids. Docket No. G–14624 is consolidated in the Permian Basin Opinion No. 468.

Since Sharples is limiting the increased rate so as not to exceed the applicable area rate of 14.5¢ per Mcf prescribed in Opinion Nos. 468 and 468–A, 34 FPC 1068, we believe it should be accepted for filing to be effective as of November 4, 1965, the date of expiration of the statutory notice, and Docket No. G–14624 should be severed from Part III of Appendix A of the Permian Basin Opinion No. 468 and the rate suspension proceeding therein terminated as hereinafter ordered.

The Commission finds:

(1) It is necessary and proper in carrying out the provisions of the Natural Gas Act and the Regulations thereunder to accept for filing the increased rate change listed in Appendix "A" hereof to become effective as of November 4, 1965, the date of expiration of the statutory notice .

(2) Docket No. G–14624 should be severed from Part III of Appendix A of the Permian Basin Opinion No. 468 and the related rate suspension proceeding therein terminated as hereinafter ordered.

The Commission orders:

(A) Sharples' rate filing, designated as Supplement No. 9 to Sharples' FPC Gas Rate Schedule No. 2, is accepted for filing to become effective as of November 4, 1965.

(B) The proceeding in Docket No. G–14624 is severed from Part III of Appendix A (AR61–1, *et al.*) of the Permian Basin Opinion No. 468 and is terminated.

APPENDIX A

Docket No.	Respondent	Rate schedule No.	Supplement No.	Purchaser and producing area	Amount of annual increase	Date filing tendered	Effective date	Cents per Mcf		Rate in effect subject to refund in docket Nos.
								Rate in effect	Proposed increased rate

[1] The stated effective date is the 1st day after expiration of the required statutory notice.
[2] Fractured rate increase.
[3] Pressure base is 14.65 psia.
[4] Excludes acreage dedicated by supplements Nos. 7 and 8.
[5] Proposed rate of 17.2295 cents per Mcf was suspended in docket No. G-14624 (rate not placed into effect).

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

SOUTHERN NATURAL GAS COMPANY, DOCKET NO. CP66-38

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued November 3, 1965)

On August 2, 1965, Southern Natural Gas Company (Applicant) filed in Docket No. CP66-38 an application, as supplemented on September 7, 1965, pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain natural gas facilities in Lee and Russell Counties, Alabama, all as more fully set forth in the application, as supplemented, in this proceeding.

Applicant proposes to construct and operate approximately 10 miles of 8⅝-inch pipeline extending from a point on Applicant's main South Line in Lee County to a point known as Columbus Junction on Applicant's Phenix City-Columbus branch line in Russell County.

The application shows that the Phenix City-Columbus branch line consists of a single line of acetylene-welded pipe installed over 35 years ago and is in need of repair and that such repairs cannot now be made without interrupting delivery of gas to downstream markets served by said line. Applicant states that the proposed pipeline will permit Applicant to make necessary repairs to the branch line, and, after construction of the proposed facilities, customers in the Phenix City-Columbus-Fort Benning area will have the added security of service resulting from an additional feed.

The total estimated cost of the proposed facilities is $404,620, which cost will be financed from cash on hand or from current operations.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on October 28, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application, supplement and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Southern Natural Gas Company, a Delaware corporation having its principal place of business in Birmingham, Alabama, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of October 6, 1942, in Docket No. G-296 (3 FPC 822).

(2) The facilities hereinbefore described, as more fully described in the application, as supplemented, in this proceeding, are to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued authorizing Applicant, Southern Natural Gas Company, to construct and operate the proposed facilities for the transportation of natural gas as hereinbefore described, all as more fully described in the application, as supplemented, in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities authorized shall be constructed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 4 months from the date on which this order issues.

(D) The facilities which Applicant wishes to retain in service (*i.e.*, the Phenix City-Columbus branch line) shall be tested hydrostatically in accordance with the ASA Code B31.8 so as to insure the safe operation of the line at a pressure of 600 psig. Applicant shall report to the Commission the results of said testing program within 30 days after the completion thereof.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

ALABAMA POWER COMPANY, PROJECT NO. 2146

ORDER FURTHER AMENDING LICENSE AND APPROVING PROJECT EXHIBITS

(Issued November 4, 1965)

Application was filed on October 8, 1964, under Section 6 of the Federal Power Act (Act) by Alabama Power Company for further amendment of its license for major Project No. 2146, situated on the Coosa River, navigable waters of the United States, and affecting lands of the United States.

The application seeks approval of a revised plan for redevelopment of the Lay Dam and Powerhouse under which the licensee would retire and remove the six original generating units and, after suitably modifying the powerhouse, install six new hydraulic turbines, rated at 40,000 horsepower each, connected to six new generators, each of 29,500 kw capacity, together with necessary associated equipment. Installation of the six new units will provide the installation of the ultimate capacity in the existing powerhouse of the Lay development of 177,000 kw through the utilization of improvements in hydroelectric generating machinery not available when the plant was constructed. The replacement of the original units will not alter the presently authorized plan to raise the normal pool level of the reservoir about 14 feet. The licensee proposes to install 26 tainter gates on the crest of the dam in lieu of 26 wheeled gates as originally planned.

Following its study and analysis, our staff has concluded that the redesigned powerhouse and associated concrete structures are safe and adequate.

The Secretary of the Army and the Chief of Engineers have reported that subject to the Corps' final determination of the location for a proposed navigation lock, following additional foundation explorations and other studies, the proposed plan for redevelopment of the Lay Dam and its effect upon navigation is satisfactory. No additional terms and conditions in the interest of navigation were recommended for inclusion in the license.

The Department of the Interior has reported that the project changes described in the application for amendment will have no adverse effects upon fish and wildlife resources, and no additional provisions in the interests of such resources were recommended for inclusion in the license.

The Department of Health, Education, and Welfare, while invited to report on the application, made no comment thereon.

Our granting of the application will increase the authorized installed horsepower capacity of the project from 756,000 horsepower to 820,000 horsepower with a resultant increase in the amount of administrative annual charges payable under the license.

The Commission finds:

(1) Public notice of the application has been given. No protests or petitions to intervene have been received.

(2) The license, further amended as hereinafter provided, will not interfere or be inconsistent with any reservation or withdrawal of lands of the United States and is in the public interest.

(3) The authorized installed capacity of the project for the purpose of computing the capacity component of the administrative annual charge is 820,000 horsepower, and the increased annual charge for reimbursing the United States for the costs of administration of Part I of the Federal Power Act, based on such capacity, as hereinafter provided, is reasonable.

(4) The following described exhibits conform to the Commission's rules and regulations and should be approved as part of the license for the project to the extent herein indicated:

EXHIBIT L

Revised	FPC No.	Showing Coosa River development Lay Dam reconstruction
Sheet 15*	2146-216	Proposed plan and elevation.
Sheet 17	2146-217	Proposed powerhouse, section and elevation.
Sheet 18	2146-218	Proposed powerhouse addition.

*Except as it shows the location of the Corps' proposed lock and channel.
(These exhibits were filed on October 5, 1964. Sheets 15 and 17 were subsequently revised at staff request and refiled on January 11, 1965.)

Exhibit M (Revision No. 2) entitled "General Description of Mechanical and Transmission Equipment" filed with the Commission as part of the application for amendment.

(5) Exhibit L, sheets 15, 17 and 18 (FPC No. 2146-104, -106 and -107) and Exhibit M-Revised, filed with the Commission on August 21, 1958, have been superseded and should be eliminated from the license for the project.

The Commission orders:

(A) The license for Project No. 2146 is hereby further amended, effective as of October 1, 1965, to authorize the aforementioned reconstruction of the Lay Dam and Powerhouse.

(B) Article 28 of the license is further revised to show the authorized installed capacity of the project as being increased to 820,000 horsepower.

(C) The exhibits designated and described in finding (4) above are hereby approved as part of the license for the project to the extent therein indicated.

(D) The superseded exhibits designated and described in finding (5) above are hereby eliminated from the license for the project.

(E) This amendment in the manner set out above shall not operate to alter or amend the license in any other respect, and shall not in any way constitute a waiver of any other part, provision or condition of the license.

(F) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license amendment. In acknowledgment of the acceptance of this license amendment, it shall be signed for the licensee and returned to the Commission within 60 days from the day of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

CITIES SERVICE GAS COMPANY, CP65-140; EL PASO NATURAL GAS COMPANY, CP65-384; NORTHERN NATURAL GAS COMPANY, CP65-389; ASHLAND OIL & REFINING COMPANY (OPERATOR), ET AL., G-3912; SINCLAIR OIL & GAS COMPANY (OPERATOR), ET AL., CI65-1267, CI65-1271

ORDER DENYING INTERVENTION

(Issued November 4, 1965)

On September 23, 1965, Socony Mobil Oil Company, Inc. (Socony) filed a petition for leave to intervene in the above-entitled consolidated proceeding. In support of its petition Socony notes that the evidence filed by some of the applicants in the consolidated proceeding relates to the total natural-gas reserves committed to Cities Service Gas Company (Cities) by producers in the Kansas Hugoton Field and to Cities' ability to take the producers' gas in accordance with the Kansas State Corporation Commission's proration orders. Socony avers that it has reserves under 157 wells committed to Cities in the Kansas Hugoton Field and that Cities' underproduction from these wells is now approximately 43 billion cubic feet. Socony concludes from the foregoing facts that it has an interest in this proceeding which may be directly affected by the outcome of the proceeding and contends that this interest will not be adequately represented by existing parties to the proceeding.

On October 4, 1965, Cities filed an answer and objections to Socony's petition for leave to intervene. Cities contends that Socony's petition is patently untimely, having been filed on September 23, 1965, which was approximately 11 weeks after July 8, 1965, the last day prescribed by the Commission for the filing of petitions to intervene in this proceeding.[1] Cities also claims that granting Socony's petition to intervene would procedurally disrupt the hearing because complete revision of the dates heretofore fixed for the filing of testimony and commencement of the hearing would be required if Socony were now permitted to become a party.

---

[1] See footnote 1 of order issued August 27, 1965, in *Cities Service Gas Company, et al.*, Docket No. CP65-140, *et al.*

On October 13, 1965, Socony filed a reply to Cities' "Answer" in which Cities had urged the Commission to deny Socony's petition to intervene. While the Commission's Rules of Practice and Procedure do not provide for the filing of replies to answers to petitions to intervene, Socony's reply has been accepted for filing in order to afford Socony a full opportunity to justify its filing of a petition to intervene 11 weeks after the last day fixed for the filing of such petitions. Among other things, Socony attributes its late filing of a petition to intervene to the fact that the order consolidating this proceeding was not issued until August 27, 1965, and that Socony did not have an opportunity to review the applications then consolidated until early September. Socony further alleges that it was not fully aware of the nature of this proceeding until it examined the direct evidence which the applicants filed on September 17, 1965, pursuant to the Commission's order of consolidation.

On page 3 of its reply to Cities' answer Socony alleges that it supports Cities' application in Docket No. CP65–140 wherein Cities seeks authorization to make a three-year, short-term sale to Panhandle Eastern Pipe Line Company (Panhandle). Socony also points out that Cities' contract with Panhandle in Docket No. CP65–140 refers to Socony's FPC Gas Rate Schedule No. 3 for the purpose of determining Cities' average cost of gas. Socony further contends that the evidence already presented in the proceeding shows that reserves and deliverability in the Kansas Hugoton Field as a whole are being discussed and that introduction of such evidence may result in findings which may be binding upon Socony. If it is permitted to intervene, Socony states that it will abide by all dates heretofore fixed for the filing of evidence and commencement of the hearing.

The reasons given by Socony as grounds for its untimely filing of its petition to intervene do not constitute the extraordinary circumstances which must be shown under Section 1.9(d) of the Commission's Rules of Practice and Procedure in order to justify the granting of an untimely petition to intervene. Socony claims to be supporting Cities' application in Docket No. CP65–140. Yet the notice of application in that docket was issued November 30, 1964; the notice was published in the *Federal Register* on December 5, 1964 (29 Fed. Reg. 16440), and provided that December 18, 1964, was the last day for the filing of petitions to intervene. That notice of application showed that Cities' underproduction in the Kansas Hugoton Field was involved, and each notice issued thereafter in the other dockets included in this consolidated proceeding indicated that the decision rendered as to any of the applications in this proceeding might have some bearing on the fact that Cities has failed to take all the gas from Kansas Hugoton Field which has been available to it under the Kansas Commission's proration orders. Moreover, it should be noted that the application in Docket No. CP65–140 had appended to it a copy of the Cities-Panhandle contract containing a reference to Socony's FPC Gas Rate Schedule No. 3 which Socony alleges is a special reason for its interest in the application in Docket No. CP65–140.

The Commission's policy of having notices of applications issued promptly would be of little value if parties who might have an interest in the applications were to wait until the issuance of an order providing for hearing on the applications before examining them to determine if they have an interest therein sufficient to merit the filing of petitions to intervene. One of the reasons for issuing notices promptly is to give potentially-interested parties an opportunity to examine applications so that protests or petitions to intervene can be filed early. Once the time for filing protests or petitions to intervene has expired, if applications have to be scheduled for formal hearings, the Commission can subsequently issue an order providing for the immediate

filing of testimony and exhibits, and the hearing can commence promptly thereafter, without the necessity of having to allow an additional time period for the filing of protests or petitions to intervene.

Socony may well be correct in contending that no other party to this consolidated proceeding will represent exactly the same interest it has in the several problems underlying the proceeding. Nevertheless, four of the major producers of gas in Kansas Hugoton Field are already parties to the proceeding inasmuch as Ashland Oil & Refining Company and Sinclair Oil & Gas Company are applicants, and Pan American Petroleum Corporation and Texaco Inc. are interveners, pursuant to the Commission's order consolidating proceedings and permitting intervention, issued herein on August 27, 1965. While the factual situations confronting those producers are not precisely identical with those of Socony, their presence in the proceeding as parties should augment accomplishment of the desirable effect which Socony claims that its intervention would produce, *viz.*, the "* * * development of a record upon which the Commission will be able to make truly accurate and correct findings." Moreover, Socony remains free to bring to the attention of the Commission staff or any other party pertinent information it believes should be adduced in the record. Finally it is clear that particularly to the extent that Socony enjoys a unique factual situation in the Hugoton Anadarko field, it cannot be bound by any determination herein in any subsequent proceeding directly involving Socony.

The Commission finds:

Good cause has not been shown for granting the untimely petition to intervene filed by Socony Mobil Oil Company, Inc.

The Commission orders:

The petition to intervene in this consolidated proceeding, filed September 23, 1965, by Socony Mobil Oil Company, Inc., is denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

PACIFIC GAS & ELECTRIC COMPANY, PROJECT NO. 2107

ORDER APPROVING NEW PROJECT EXHIBIT K AND ADJUSTING ANNUAL CHARGES

(Issued November 4, 1965)

On April 27, 1965, Pacific Gas & Electric Company, licensee for major Project No. 2107, filed for Commission approval a new Exhibit K map to reflect modifications of the project made during construction. The project is located on the North Fork of Feather River in Butte County, California, and affects lands of the United States within the Plumas National Forest.

The new exhibit shows the changes in the alignment of the tunnel location, the increased area of the powerhouse site, the roads needed for project purposes, and the routes of the two project transmission line taps to the junction with the licensee's interconnected transmission system.

The principal effect of our approval of the new exhibit will be to show in the license an increase in the National Forest lands occupied by the project of 19.78 acres, with a resultant increase in the amount of annual charges for such occupancy.

The Chief, Forest Service, acting for the Secretary of Agriculture, who has supervision over the Plumas National Forest, has advised that Commission

approval of the new exhibit will not interfere or be inconsistent with the purposes for which the Plumas National Forest was created or acquired.

The Commission finds:

(1) New Exhibit K–2A (FPC No. 2107–7) entitled "Plan and Profile of Dam, Intake, Conduits, and Powerhouse—Poe Project—Pacific Gas & Electric Co.", signed on March 16, 1965, for Pacific Gas & Electric Company by S. L. Sibley, President, conforms to the Commission's rules and regulations and should be approved as part of the license for the project.

(2) The increased amount of annual charges for recompensing the United States for the occupancy of its lands by the project is reasonable as hereinafter fixed and specified.

The Commission orders:

(A) The new exhibit described in finding (1) above is hereby approved as part of the license for Project No. 2107, and Exhibit K–2 (FPC No. 2107–3), now part of the license and which has been superseded, is hereby eliminated from the license for the project.

(B) Subparagraph (ii) of Article 31 of the license is hereby modified to read as follows:

> (ii) For the purpose of recompensing the United States for the use, occupancy, and enjoyment of its lands $294.55, effective as of October 1, 1953, the effective date of the license.

(C) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this order. In acknowledgment of the acceptance of this order, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

ARKANSAS POWER & LIGHT COMPANY, DOCKET NO. E–7090

ORDER DENYING REHEARING

(Issued November 5, 1965)

Arkansas Power & Light Company (Respondent) on October 6, 1965, filed an application for rehearing of our Opinion No. 473 and order determining jurisdiction issued September 7, 1965, 34 FPC 747, where we determined that Respondent's sales of electric energy for resale to its municipal and cooperative customers in Arkansas are sales in interstate commerce subject to our jurisdiction under the Federal Power Act. The points made by Respondent were covered in the briefs before the examiner and in the exceptions and were disposed of in our opinion and order. No further discussion is necessary.

The Commission further finds:

The assignments of error and grounds for rehearing set forth in the application for rehearing filed by Respondent in this proceeding present no facts or legal principles which would warrant any change or modification in the Commission's Opinion No. 473 and order.

The Commission orders:

The application for rehearing filed by Respondent is denied.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

JAKE L. HAMON, ET AL., DOCKET NO. RI61-408, ET AL.[1]

ORDER CONDITIONALLY APPROVING RATE SETTLEMENT PROPOSAL, SEVERING AND TERMINATING PROCEEDINGS AND PRESCRIBING REFUNDS

(Issued November 5, 1965)

There is before us for consideration a Motion for Approval of Settlement Proposal, and Termination of Rate Proceedings filed on August 6, 1965, by Jake L. Hamon, *et al.* (Hamon) encompassing the rates for twenty-one of Hamon's currently effective FPC Gas Rate Schedules. In summary, the settlement proposal as filed by Hamon provides:

(1) Settlement rates, including tax reimbursement, equal to or less than the Commission's applicable area ceilings;

(2) Hamon waives the right to file for contractually authorized increased rates until August 1, 1970; however, Hamon reserves the right to file for any increased rates, if contractually authorized, up to the applicable area-rate levels established by any order or rule of the Commission, or to file for any contractually authorized increase in tax reimbursement;

(3) Hamon will delete any favored-nation, and indefinite price redetermination clauses contained in the presently effective FPC Gas Rate Schedules, and as to Rate Schedule Nos. 14, 41 and Edwin L. Cox (Operator), *et al.*, FPC Gas Rate Schedule No. 47, Hamon will, insofar as his interest is concerned, eliminate the periodic price increase provisions therefrom;

(4) Refunds with interest, at applicable interest rates, to the date of issuance of this order, under rate schedules where collection was made subject to refund, of the difference between the revenues actually collected and those which would have been collected at the settlement rate, in each instance; additionally, Hamon will refund under its FPC Gas Rate Schedule Nos. 28 and 31 commencing with March 24, 1964, to the date of issuance of this order, all monies charged and collected for gas above 16¢ per Mcf, with appropriate interest, and under Rate Schedule No. 18, it will refund $79,240.65, and under Rate Schedule No. 27, it will refund $105.09;

(5) Exclusion from the settlement proposal of sales in the Permian Basin;

In support of his proposal, Hamon states that the settlement rates, refunds, moratorium periods and other provisions thereof, not specifically noted herein are in the public interest in that they are reasonable, and will provide price stability for a long period of time for natural gas moving in interstate commerce.

Additionally, Hamon requests that we sever from the consolidated proceedings in Docket No. AR64-1, the proceedings in *Jake L. Hamon (Operator), et al.*, Docket No. G-16747, *et al.;* and also sever those matters which concern Hamon from the proceedings in *Skelly Oil Company, et al.*, Docket No. G-18638, *et al.*, and the proceedings, in *Amerada Petroleum Corporation, et al.*, Docket No. CI62-1544, *et al.* Consequently, as a condition to our approval of Hamon's proposal we shall require Hamon to file a motion in the United States Court of Appeals for the Tenth Circuit for withdrawal of its petition for review of Opinion No. 422, 31 FPC 623, in the *Amerada* proceeding (CA10-8363).

With respect to refunds, we find Hamon's proposal to be acceptable, and shall approve the same. Such refunds will be approximately $181,000, in-

[1] The additional dockets involved herein are set forth in the appendices hereto.

cluding applicable interest, and Hamon's jurisdictional revenues will be reduced approximately $94,000 annually.

Hamon has included in his offer a reservation that the proposed settlement would no longer be binding in the event amendment of the Natural Gas Act removes any of his sales from our jurisdiction. This reservation is unacceptable as to those favored-nation, price redetermination or periodic escalation provisions which Hamon has agreed in his offer to delete from his rate schedules.[2] We shall therefore require as a condition to this order that Hamon amend his contracts as agreed so as to remove any future contractual basis for higher rates under these provisions. Hamon's reservation will thus be made ineffectual as to the deleted provisions.

We believe that Hamon's settlement proposal as hereinafter conditioned, is in the public interest and shall approve the same. However, we desire to make it clear that acceptance of Hamon's offer of settlement shall not be construed as approval of any future increased rate that may be filed by Hamon under the subject rate schedules and is without prejudice to any findings or order of the Commission in any future proceeding involving Hamon's rates and rate schedules. Additionally, for all of the reasons set forth in *Humble Oil & Refining Company*, Docket No. G-9287, *et al.*, 32 FPC 49, we shall require Hamon to deposit the refund monies in a special escrow account or to commingle the retained refunds with his general assets pending further order of the Commission.

The Commission finds:

The proposed settlement of the above-designated proceedings, on the basis described herein, as more fully set forth in the offer of settlement filed with the Commission by Hamon on August 6, 1965, is consistent with the Statement of General Policy No. 61-1, as amended, 18 CFR 2.56, and approval thereof as made effective and hereinafter ordered is in the public interest and is appropriate to carry out the provisions of the Natural Gas Act.

The Commission orders:

(A) The offer of settlement filed with the Commission by Hamon on August 6, 1965, is approved in accordance with the provisions of this order.

(B) Hamon shall file, within 30 days from the date of issuance of this order, notices of change in rates under its FPC Gas Rate Schedules to reflect the settlement rates and executed contract amendments in accordance with the terms of his settlement proposal as approved herein. The notices of change and the contractual amendments shall be submitted in accordance with Part 154 of the Commission's Regulations under the Natural Gas Act.

(C) Within 30 days from the date of issuance of this order, Hamon shall file a motion to withdraw his appeal in the United States Court of Appeals for the Tenth Circuit to review the Commission's Opinion No. 422 in the *Amerada* proceeding (CA10-8363).

(D) Hamon shall compute the difference between the rates collected subject to refund and the settlement rate for the sales for which it proposes to make refunds with applicable interest to the date of this order, and shall within 45 days from the date of issuance of this order submit a report to the Commission, with a copy to its jurisdictional pipeline purchasers, setting out the amount of refunds (showing separately the principal and applicable interest) the bases used for such determination, the period covered, and ten days thereafter shall submit to the Commission a copy of a letter from its jurisdictional pipeline purchasers agreeing to the correctness of such amounts.

---

[2] See *Warren Petroleum Corporation*, Docket No. RI61-63, (30 FPC 1040).

(E) Hamon shall retain the amounts shown in the report required under paragraph (D) above, subject to further order of the Commission directing the disposition of those amounts, excepting the refunds due and owing to Northern Natural Gas Company to which Hamon shall refund such monies ten days after receiving the letter from Northern required by Paragraph (D) above, with applicable interest.

(F) Hamon may deposit the retained refunds in a special escrow account, and shall tender for filing within 60 days of the date of issuance of this order an executed Escrow Agreement, conditioned as set out below, accompanied by a certificate showing service of a copy thereof upon its jurisdictional pipeline customers. Unless notified to the contrary by the Secretary within 30 days from the date of filing thereof, the Escrow Agreement shall be deemed to be satisfactory and to have been accepted for filing. The Escrow Agreement shall be entered into between Hamon and any bank or trust company used as a depositor for funds of the United States Government and the agreement shall be conditioned as follows:

(1) Hamon, the bank or trust company, and the successors and assigns of each, shall be held and formally bound unto the Federal Power Commission for the use and benefit of those entitled thereto, with respect to all amounts and the interest thereon deposited in the special escrow account, subject to such agreement, and such bank or trust company shall be bound to pay over to such person or persons as may be identified and designated by final order of the Commission and in such manner as may be therein specified, all or any portion of such deposits and the interest thereon.

(2) The bank or trust company may invest and reinvest such deposits in any short-term indebtedness of the United States or any agency thereof or in any form of obligation guaranteed by the United States which is, respectively, payable within 120 days as the said bank or trust company in the exercise of its sound discretion may select.

(3) Such bank or trust company shall be liable only for such interest as the invested funds described in Paragraph (2) above will earn and no other interest may be collected from it.

(4) Such bank or trust company shall be entitled to such compensation as is fair, reasonable and customary for its services as such, which compensation shall be paid out of the escrow account to such bank or trust company. Said bank or trust company shall likewise be entitled to reimbursement for its reasonable expenses necessarily incurred in the administration of this escrow account, which reimbursement shall be made out of the escrow account.

(5) Such bank or trust company shall report to the Secretary quarterly, certifying the amount deposited in the bank or trust company for the quarterly period.

(G) If Hamon elects to commingle the retained refunds with his general assets and use them for business purposes, he shall notify the Secretary of the Commission of his intention so to do within sixty days of the issuance of this order, and shall pay interest on such monies at the rate of 4.5% per annum from the date of issuance of this order to the date on which they are paid over to the person or persons ultimately determined to be entitled thereto by final order or orders of the Commission.

(H) Hamon, over the signature of a responsible officer of his firm, shall file with the Commission within 30 days from the date of issuance of this order an original and one copy in writing of its acceptance or rejection of the terms and conditions of this order.

(I) Upon notification by the Secretary of the Commission that Hamon has complied with the terms and conditions of this order, the proceedings in

Appendix A hereto shall terminate, however, the proceedings in Docket No. RI60–60 shall terminate only insofar as it pertains to Hamon; the proceeding in Docket No. RI61–408 shall be severed from the proceedings in Docket No. AR64–1, *et al.*, and the proceedings in Appendix B hereto shall be severed from their respective consolidated proceedings, and the certificates of public convenience and necessity issued to Hamon in the *Hamon*, *Skelly* and *Amerada* proceedings (*supra*) shall be deemed effective, all without further order of the Commission.

(J) The acceptance by the Commission of Hamon's offer of settlement is without prejudice to any findings or determinations that may be made in any proceeding now pending, or hereafter instituted by or against Hamon and is without prejudice to claims or contentions which may be made by Hamon, the Commission staff, or any affected party hereto, in any proceedings.

PACIFIC POWER & LIGHT COMPANY, DOCKET NO. E-7247

ORDER AUTHORIZING THE ISSUANCE OF COMMON STOCK

(Issued November 5, 1965)

Pacific Power & Light Company (Applicant), a corporation organized under the laws of the State of Maine and doing business in the States of Oregon, California, Wyoming, Washington, Montana and Idaho with its principal place of business at Portland, Oregon, filed an application on September 29, 1965, for authorization pursuant to Section 204 of the Federal Power Act to issue and sell to its employees up to but not in excess of 250,000 shares of its authorized but unissued shares of Common Stock of the par value of $3.25 per share.

The proposed issuance of Common Stock will be made pursuant to the terms of Applicant's Employees' Stock Purchase Plan adopted by the Board of Directors on January 26, 1965 and approved by Applicant's stockholders on April 20, 1965. This Plan provides for periodic offerings during a period of five years of not less than 10 and not more than 400 shares of Applicant's authorized but unissued Common Stock to each regular full-time employee of the Company, but not more than 250,000 shares in the aggregate, at a price equal to 90% of the fair market value on the date of offering. A regular full-time employee is one who has been in the employ of Applicant for at least six months and who is in its active service on the date an offering is made. As used in the Plan, the term "regular full-time employee" includes officers but excludes directors not otherwise employed by Applicant. The fair market value will be determined by an average of bid and ask prices on the over-the-counter market for Applicant's outstanding Common Stock. The bid and ask market prices are to be furnished by security dealers. Subscription payments must be made within 27 months from the date of offering.

The aggregate of offerings under the Plan will not exceed 5% of the number of all shares of Common Stock outstanding at the time of any offering. Applicant expects that on the basis of its experience that 250,000 shares will be a sufficient number for 5 successive yearly offerings under the Plan. According to the application, the provisions of Applicants' Employee Stock Purchase Plan have been adopted in accordance with the amendment to the Internal Revenue Code contained in the Revenue Act of 1964 which makes specific provision for the qualifications of such Stock Purchase Plans. Applicant's previous offerings of stock to its employees were authorized by this Commission in orders issued on May 7, 1953, 12 FPC 976, September 20, 1957, 18 FPC 350, October 13, 1960, 24 FPC 871, and October 15, 1962, 28 FPC 602, in Docket Nos. E-6490, E-6773, E-6955 and E-7056, respectively.

Applicant states that no underwriting fees or commission will be paid in connection with the proposed issuance of Common Stock. Applicant expects that the purchase price formula will produce proceeds per share about equal to proceeds per share pursuant to a sale to underwriters or pursuant to an underwritten rights offer. Applicant proposes to apply the net proceeds from the issuance and sale of the Common Stock for construction, improvement and extension of its electric facilities in accordance with Applicant's 1965, 1966 and 1967 construction program which was described in the Commission's order issued June 3, 1965, *Pacific Power & Light Company*, in Docket No. E-7129, 33 FPC 1207.

Applicant states that the purposes of the Plan are to encourage employees to become stockholders in the Company, to stimulate and increase interest on their part in the affairs of the Company, to afford them an opportunity to share in the proceeds and growth of the Company and to promote systematic savings by them.

Written notice of the application has been given to the Public Utilities Commissioner of Oregon, the Wyoming Public Service Commission, the Washington Utilities and Transportation Commission, the Public Utilities Commission of the State of California, the Public Service Commission of Montana and the Idaho Public Utilities Commission and to the Governor of each of those States. Notice has also been published in the Federal Register on October 15, 1965 (30 F.R. 13179), stating that any person desiring to be heard or to make any protest with reference to the application should on or before October 29, 1965, file a petition or protest with the Federal Power Commission, Washington, D.C. 20426. No protest, petition or request to be heard in opposition to the granting of the application has been received.

The Commission finds:

(1) Applicant, a corporation, is a public utility within the meaning of Section 204 of the Federal Power Act subject to the jurisdiction of the Commission as heretofore determined and set forth in the Commission's order issued March 28, 1962, *Pacific Power & Light Company*, in Docket No. E–7025 (27 FPC 620).

(2) The proposed issuance and sale of up to a maximum of 250,000 shares of Common Stock, par value $3.25 per share, pursuant to the provisions of the above-described Employees' Stock Purchase Plan, will constitute an issuance of securities within the purview of Section 204 of the Federal Power Act.

(3) Applicant is not organized and operating in a State under the laws of which the security issue here involved is regulated by a State commission within the meaning of Section 204(f) of the Act; and the proposed issuance of Common Stock, as described above, is therefore, not exempt by virtue of that Section from the requirements of Section 204 of the Act.

(4) Under the circumstances set forth above, sufficient cause has been shown for exempting the proposed issuance and sale of Common Stock from the competitive bidding requirements of Sections 34.1a(a), (b), and (c) of the Commission's Regulations under the Federal Power Act.

(5) The proposed issuance and sale of Common Stock, as hereinafter authorized, will be for a lawful object, within the corporate purposes of Applicant and compatible with the public interest, which is appropriate for and consistent with the proper performance of service by Applicant as a public utility, and which will not impair its ability to perform that service, and is reasonably necessary and appropriate for such purposes.

(6) The period of public notice given in this matter is reasonable.

The Commission orders:

(A) The proposed issuance and sale of Common Stock, referred to above, upon the terms and conditions and for the purposes specified in the application, are hereby authorized, subject to the provisions of this order.

(B) The proposed issuance and sale of Common Stock are hereby exempted from the competitive bidding requirements of Sections 34.1a(b) and (c) of the Commission's Regulations under the Federal Power Act.

(C) This authorization shall not extend beyond 60 months from the date of issuance of this order.

312–270—69——82

(D) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuation, estimates or determinations of cost, or any other matter whatsoever now pending or which may come before this Commission.

(E) Nothing in this order shall be construed to imply any guarantee or obligation on the part of the United States in respect of any securities to which this order relates.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

PAN AMERICAN PETROLEUM CORPORATION, DOCKET NO. RI66-154

ORDER GRANTING APPLICATION FOR REHEARING, CONDITIONALLY ACCEPTING FILING, AND PROVIDING FOR HEARING ON AND SUSPENSION OF PROPOSED CHANGE IN RATE

(Issued November 5, 1965)

Pan American Petroleum Corporation (Pan American) filed an application for rehearing on October 8, 1965, of the Commission's order issued September 10, 1965, 34 FPC 847, rejecting, *inter alia*, a proposed rate increase from 16.0¢ to 20.5¢ per Mcf [1] tendered on August 13, 1965, by Pan American for the sale of residue gas from gas-well gas and oil-well gas to Transwestern Pipeline Company under its FPC Gas Rate Schedule No. 329 in the Permian Basin Area of Texas. The contract involved here was executed on March 8, 1962, and thus covers a sale for new gas under Opinion No. 468, 34 FPC 159. Pan American's proposed rate, which exceeds the applicable just and reasonable rate ceilings determined in Opinion No. 468 for the sale of gas in the Permian Basin Area, was rejected for the reasons set forth in the order issued August 26, 1965, in *Socony Mobil Oil Company, Inc. (Operator), et al.*, 34 FPC 595.

On October 20, 1965, subsequent to the issuance of our rejection order, the Tenth Circuit in *Skelly Oil Co.* v. *F.P.C.* (CA10 No. 8385, *et al.*) stayed through January 20, 1966, the effectiveness of Opinion Nos. 468 and 468-A, 34 FPC 1068, as to Skelly, Phillips and Warren. The Court's order further provided that any member of the Court may grant a similar stay if other petitions for review are filed in or transferred to that Court. Argument was also set for January 7, 1966 on the question of further stay.

Pan American in Case No. 8458 filed in the Tenth Circuit both a petition for review and a motion for stay dated October 25, 1965, of Opinion Nos. 468 and 468-A. Under these circumstances, it is appropriate to grant Pan American's application for rehearing and to suspend its proposed increase for five months from the time it would have become effective had it not been rejected. However, we wish to make it clear that we will reject this increase *ab initio* in the event the stay is dissolved or Opinion Nos. 468 and 468-A are upheld upon judicial review.

The proposed changed rate and charge may be unjust, unreasonable, unduly discriminatory, or preferential, or otherwise unlawful.

The Commission finds:

It is in the public interest and consistent with the Natural Gas Act that the Commission enter upon a hearing regarding the lawfulness of the proposed change, and that Supplement No. 2 to Pan American's FPC Gas Rate

[1] The proposed increased rate is designated herein as Supplement No. 2 to Pan American's FPC Gas Rate Schedule No. 329. Details of the proposed increase are set forth in Appendix A hereof.

Schedule No. 329 herein be suspended and its use be deferred as ordered below.

The Commission orders:

(A) Under the Natural Gas Act, particularly Sections 4 and 15, the Regulations pertaining thereto [18 CFR, Chapter I], and the Commission's Rules of Practice and Procedure, a public hearing shall be held concerning the lawfulness of the change proposed by Pan American.

(B) Pending hearing and decision thereon, Supplement No. 2 to Pan American's FPC Gas Rate Schedule No. 329 is suspended and its use deferred until February 13, 1966, and thereafter until made effective as prescribed by the Natural Gas Act.

(C) Unless otherwise ordered by the Commission, neither the suspended supplement, nor the rate schedule sought to be altered, shall be changed until disposition of this proceeding or expiration of the suspension period.

(D) Notices of intervention or petitions to intervene may be filed with the Federal Power Commission, Washington, D.C. 20426, in accordance with the Rules of Practice and Procedure [18 CFR 1.8 and 1.37(f)] on or before December 20, 1965.

PENROSE PRODUCTION COMPANY, ET AL., DOCKET NO. RI66-155

ORDER CONDITIONALLY ACCEPTING FILING AND PROVIDING FOR HEARING ON AND SUSPENSION OF PROPOSED CHANGE IN RATE

(Issued November 5, 1965)

On October 6, 1965, Penrose Production Company, *et al.*, (*Penrose*)[1] tendered for filing a proposed change in its presently effective rate schedule for the sales of natural gas subject to the jurisdiction of the Commission. The proposed change, which constitutes an increased rate and charge, is contained in the following designated filing:

Description: Notice of Change, dated October 4, 1965
Purchaser and Producing Area: El Paso Natural Gas Company (Eumont Field, Lea County, New Mexico) (Permian Basin Area)
Rate Schedule Designation: Supplement No. 7 to Penrose's FPC Gas Rate Schedule No. 6
Effective Date: November 6, 1965[2]
Amount of Annual Increase: $2,690
Effective Rate: 11.7199¢ per Mcf.[3]
Proposed Rate: 17.0992¢ per Mcf.[4]
Pressure Base: 14.65 psia.

Penrose requests that its proposed rate increase be permitted to become effective "immediately". Good cause has not been shown for waiving the 30-day notice requirement provided in Section 4(d) of the Natural Gas Act to permit an earlier effective date for Penrose's rate filing and such request is denied.

Penrose proposes a favored-nation rate increase from 11.7199¢ to 17.0992¢ per Mcf, amounting to $2,690 annually, for a sale of "old" gas-well gas to El Paso Natural Gas Company in the Permian Basin Area of New Mexico. The proposed rate exceeds the just and reasonable ceiling of 13.5¢ per Mcf, plus applicable state and local production taxes, prescribed in Opinion No. 468, 34 FPC 159.

Up to September 8, 1964, the interest in certain properties involved with Penrose's proposed rate increase was covered by Mapenza Oil Company (Mapenza) under a contract dated August 20, 1956. Mapenza did not submit filings to the Commission covering such sale. In 1957, Mapenza authorized Continental Oil Company (Continental) to make such filings in its behalf. (Continental's FPC Gas Rate Schedule No. 85). By assignments dated November 13, 1958, Mapenza transferred its interest to Penrose Production Company, who continued to have the acquired interest covered by Continental, until September 8, 1964, when Penrose submitted its own certificate application and rate schedule to continue the sale formerly covered by Continental. The sale involved herein was one of those covered when Continental was

[1] 1605 Commerce Building, Fort Worth, Texas 76102. Attn: Glenn G. Neill.
[2] The stated effective date is the first day after expiration of the required statutory notice.
[3] Present rate previously suspended and is in effect subject to refund in Docket No. RI65-398.
[4] Subject to reduction of 0.4467¢ per Mcf for compression of low pressure gas (below 600 psig).

made a respondent in Docket No. AR61–1. The fact that the assignee, Penrose, received separate certificate authorization in 1964 and filed its own rate schedule did not have the effect of removing that sale from the area rate proceeding in Docket No. AR61–1.

The just and reasonable rate prescribed by the Permian Basin Opinion No. 468 and the moratorium applicable to all sales covered by Opinion No. 468 is therefore deemed to cover the subject sale. The proposed rate increase is thus subject to rejection. We recognize, however, that the Tenth Circuit in *Skelly Oil Co.* v. *F.P.C.* (No. 8385, *et al.*) has issued a temporary stay until January 20, 1966 of Opinion Nos. 468 and 468–A (34 FPC 1068), which covers the moratorium provisions of ordering paragraph (H) of Opinion No. 468. While this stay in terms is applicable only to Skelly, Phillips and Warren (who had, as of the time of the court's order, filed petitions for review of Opinion Nos. 468 and 468–A), we believe Penrose should be treated similarly to the three large producers who secured court stays. Accordingly, instead of rejecting the Penrose filing at this time, we shall conditionally accept it for filing, and simultaneously suspend the rate increase for a period of five months from the date of expiration of the statutory notice. Our acceptance of the instant rate increase is expressly conditioned to provide that the rate increase will be rejected, *ab initio*, in the event the court stay referred to above is dissolved or Opinion Nos. 468 and 468–A are upheld upon judicial review insofar as ordering paragraph (H) is concerned.

The proposed changed rate and charge may be unjust, unreasonable, unduly discriminatory, or preferential, or otherwise unlawful.

The Commission finds:

It is necessary and proper in the public interest and to aid in the enforcement of the provisions of the Natural Gas Act that the Commission enter upon a hearing concerning the lawfulness of the proposed change, and that Supplement No. 7 to Penrose's FPC Gas Rate Schedule No. 6 be suspended and the use thereof deferred as hereinafter ordered.

The Commission orders:

(A) Pursuant to the authority of the Natural Gas Act, particularly Sections 4 and 15 thereof, the Commission's Rules of Practice and Procedure, and the Regulations under the Natural Gas Act [18 CFR, Chapter I], a public hearing shall be held upon a date to be fixed by notice from the Secretary concerning the lawfulness of the proposed increased rate and charge contained in Supplement No. 7 to Penrose's FPC Gas Rate Schedule No. 6.

(B) Pending such hearing and decision thereon, Supplement No. 7 to Penrose's FPC Gas Rate Schedule No. 6 is conditionally accepted for filing, as noted above, and is hereby suspended and the use thereof deferred until April 6, 1966, and thereafter until such further time as it is made effective in the manner prescribed by the Natural Gas Act.

(C) Neither the supplement hereby suspended, nor the rate schedule sought to be altered thereby, shall be changed until this proceeding has been disposed of or until the period of suspension has expired, unless otherwise ordered by the Commission.

(D) Notices of intervention or petitions to intervene may be filed with the Federal Power Commission, Washington, D. C., 20426, in accordance with the Rules of Practice and Procedure [18 CFR 1.8 and 1.37(f)] on or before December 22, 1965.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

THE WASHINGTON WATER POWER COMPANY AND THE MONTANA POWER COMPANY, DOCKET NO. E-7237

ORDER AUTHORIZING TRANSFER OF FACILITIES

(Issued November 5, 1965)

The Washington Water Power Company (Washington) and The Montana Power Company (Montana), filed a joint application with the Federal Power Commission on August 9, 1965, seeking an order pursuant to Section 203 of the Federal Power Act, authorizing the acquisition by Washington and the disposition by Montana of certain electric facilities located in Coeur d'Alene mining area in Shoshone County, Idaho.

Washington is a corporation organized under the laws of the State of Washington and qualified to do business in the States of Washington, Idaho and Montana with its principal business office at Spokane, Washington. It is engaged primarily in the generation, transmission, distribution and sale of electric energy in eastern Washington, northern Idaho, and western Montana.

Montana is incorporated under the laws of the State of Montana and is qualified to do business in the States of Montana, Idaho, and Wyoming, with its principal place of business at Butte, Montana. It is engaged primarily in the generation of electric energy in Montana and in the transmission, distribution and sale of electric energy in Montana, Yellowstone National Park in Wyoming and Shoshone County, Idaho.

According to the application, the facilities which Washington proposes to acquire from Montana include four miles of double circuit 100 kv transmission line 22 miles of 16.5 kv and 4 miles of 2.4 kv distribution line, the Burke transmission substation, a number of other substations, line transformers and appurtenant facilities. These facilities include all the properties of Montana located within the State of Idaho. The customers served from these facilities consist of 76 residential, 12 commercial and three industrial.

The application indicates that the facilities are to be acquired by Washington and sold by Montana for a cash consideration of $600,000. This amount will be $336,981.21 in excess of the original depreciated cost of these facilities which was $263,018.79. On the books of Washington, the excess of $336,981.21 will be an Electric Plant Acquisition. Washington proposes to amortize this Acquisition Adjustment by equal annual charges over a period of ten years to Account 425, Miscellaneous Amortization, with concurrent credits to Account 115, Accumulated Provision for Amortization of Electric Plant Acquisition Adjustments. Annual amortization will be about $33,700.

On the books of Montana, the excess of $336,981.21 will be a profit on the sale of facilities. Montana proposes to credit this profit to Account 434, Miscellaneous Credits to Surplus. This profit will require the payment of additional income taxes which will be charged to Account 435, Miscellaneous Debits to Surplus.

For many years, both Washington and Montana have served customers in the Coeur d'Alene mining area in Idaho and some of Montana's customers have been and are being served from Washington's facilities, Montana billing the customers and in turn purchasing power from Washington. Although the $600,000 which Washington has agreed to pay for the facilities is considerably more than the depreciated original cost of these facilities, the application indicates that the purchase price is based on the protection of pres-

ent revenues and prospective increases, in part covered by contract, and in part anticipated as the result of a very great increase in activity in this mining district.

According to Washington, the American Smelting and Refining Company plans to spend $5,000,000 in the next three years in developing properties in this mining area and to locate a mill near Osburn in Washington's service territory. Revenues from these additional loads are estimated in excess of $155,000 per year and contracts have been signed. Washington states that after pro-forma statement of these amounts and after similar statement of operating expenses and taxes, it will receive a net income increase in excess of $93,000. Therefore, according to Washington, the purchase price comes well within the ratio of capital expenditure to new business which Washington would use in determining the desirability of any extension of facilities. In addition to the plans of the American Smelting and Refining Company, Washington also believes that there will be further new developments in this mining area which have not yet been announced.

It is estimated that the change of ownership of facilities will result in most of the customers receiving a reduction in rates averaging 7% for residential customers and 12% for commercial customers. Rates of a few customers will increase from $.03 to $.55 a month. According to the application, the properties have been costly and difficult for Montana to maintain, particularly in times of emergency, since the closest Montana line crew is stationed about 120 miles from the facilities. Washington proposes to eliminate duplicate facilities wherever possible which should result in improved voltage regulation, continuity of service and area appearance and because Washington has business offices, line crews and service men in the area, it expects to be able to render more rapid service.

Written notice of the application has been given to the Idaho Public Utilities Commission and to the Governor of that State. Notice has also been published in the Federal Register on August 25, 1965 (30 F.R. 11004), stating that any person desiring to be heard or to make any protest with reference to the application, shall file petitions or protests on or before September 16, 1965. No protest, petition or request to be heard in opposition to the granting of the application has been received.

The Commission finds:

(1) Washington, a corporation, owns and operates facilities for the transmission and sale at wholesale of electric energy which is generated in the States of Washington, Idaho, Montana and Oregon and consumed outside the state in which it is generated, all of which facilities are in addition to and do not include facilities used for the generation of electric energy used in local distribution or only for the transmission of electric energy in interstate commerce or facilities for the transmission of electric energy consumed wholly by the transmitter, and Washington is, therefore, a public utility within the meaning of Section 203 of the Federal Power Act.

(2) Montana, a corporation, is a public utility within the meaning of Section 203 of the Federal Power Act, subject to the jurisdiction of the Commission as heretofore described and set forth in the Commission's order issued November 1, 1961, *The Montana Power Company, et al.*, Docket No. E–7000 (26 FPC 668).

(3) By the proposed transaction, Montana will dispose of part of its facilities subject to the jurisdiction of the Commission and Washington will merge or consolidate its facilities, subject to the jurisdiction of the Commission with those of Montana, another person, all within the meaning and subject to the requirements of Section 203 of the Federal Power Act.

(4) The proposed transaction, as described above, upon the terms and conditions set forth in the application, and subject to the provisions of this order will be consistent with the public interest as expressed in Section 203 of the Federal Power Act.

The Commission orders:

(A) The proposed sale by Montana and the proposed acquisition by Washington of the aforementioned electric facilities, all as described above, is authorized and approved upon the terms and conditions and for the purposes set forth in the application subject to the provisions of this order.

(B) Montana and Washington shall record the proposed transaction herein authorized and the facilities and properties referred to above as provided in the Commission's Uniform System of Accounts Prescribed for Public Utilities and Licensees.

(C) This authorization shall expire unless the transaction herein authorized and approved is consummated within 90 days from the date of issuance of this order.

(D) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuations, estimates or determinations of cost, or any matter whatsoever now pending or which may come before this Commission or any other regulatory body and nothing herein shall be construed as an acquiescence by this Commission in any estimate or determination of cost or any valuation of property claimed or asserted.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

ALABAMA POWER COMPANY, DOCKET NO. E-6893

ORDER WAIVING PENALTY FOR DELINQUENCY IN PAYMENT OF INTERIM ASSESSMENT FOR HEADWATER BENEFITS

(Issued November 8, 1965)

On July 27, 1965, a letter was sent to Alabama Power Company in which an interim assessment was made for headwater benefits received by the Company at its Weiss, Lay, Mitchell and Jordan plants due to the operation of the upstream Federal Alatoona project.[1] This interim bill, in the amount of $235,261 was payable within 60 days of the date of the letter. The sixty day period expired on September 25, 1965.

By letter of September 23, 1965 the Company objected to the interim billing on the theory that the Commission's authority to make such a demand was doubtful, and that there appeared to be no procedure for refunding in case it later developed that the Company's interim payment was greater than the final total amount found to be due. In questioning the Commission's authority to make an interim billing for headwater benefits charges the Company referred to litigation on this point then pending in the Court of Appeals for the Fourth Circuit.[2] On these grounds, it was requested that the Commission postpone its interim bill. The request was denied by letter dated October

[1] The billing did not include any assessment for the cost of making the headwater benefits study.

[2] The case cited by the Company, *Virginia Electric & Power Company* v. *F.P.C.*, was subsequently decided on October 6, 1965, the Court of Appeals upholding the Commission's authority to make such interim billings. 351 F. 2d 408 (CA4–1965).

7, 1965. Within a week thereafter, on October 13, 1965, a letter was received from the Alabama Power Company enclosing a check for the amount of the interim bill. However, since this payment was not received within the prescribed 60-day period, a penalty attached for such delinquency under the Commission's Regulations.

In its October 13, 1965 letter forwarding payment, the Company points out that its delay in making payment was occasioned solely by the Company's effort to protect what it considered to be its legal rights, and requests that the Company be relieved of any penalties for delinquency.

The Commission finds:

It will not be inconsistent with the public interest to waive the penalty which attached by reason of Alabama Power Company's delay in payment of the amount demanded in the Commission's July 27, 1965 interim billing for headwater benefits.

The Commission orders:

The aforementioned penalty is hereby waived.

OPINION NO. 480

NATURAL GAS PIPELINE COMPANY OF AMERICA, DOCKET NO. CP64-150; OKLAHOMA NATURAL GAS COMPANY, DOCKET NO. CP64-273; OKLAHOMA NATURAL GAS STORAGE COMPANY, DOCKET NO. CP64-273

OPINION AND ORDER GRANTING CERTIFICATE AND DETERMINING JURISDICTION

(Issued November 8, 1965)*

Syllabus

1. Determination of jurisdictional issue depends on whether proposed operation under storage agreement involves sale of gas for resale in interstate commerce. P. 1261.
2. Contractual label put upon transaction by parties is not controlling if it attempts to avoid statute while engaging in activities intended to be regulated. P. 1261.
3. Unlike *Lo-Vaca* proposed transaction presents no dangers to federal regulatory scheme. P. 1262.
4. Relying on particular facts of this case, Commission *concludes* that joint use of Sayre storage field does not constitute sale or transportation of gas within meaning of the Gas Act. P. 1262.
5. Arrangement whereby Natural Gas Pipe pays Storage Company for use of cushion gas as part of its interstate activities and Storage Company retains title to equivalent amount of gas at end of lease, must be construed as a sale of gas under the Act. PP. 1263, 1264.
6. Exchanges of gas [even temporal one proposed here] have always been construed as sales and resales of gas. P. 1264.
7. Commission *concludes* that Sayre field proposal does not involve transportation or sale of natural gas in interstate commerce by Oklahoma Natural or Storage Company provided Storage Company does not maintain gas there and be compensated therefor, in a volume exceeding its proportionate use of the field. P. 1264.

* See Opinion No. 480-A on rehearing issued February 7, 1966, 35 FPC 189.

8. In a proceeding under Sections 1(b) and 7(c) of the Natural Gas Act, Commission *determines* jurisdiction and *issues* certificate of public convenience and necessity authorizing acquisition and operation of Sayre gas storage field.

Charles C. McDugald for Natural Gas Pipeline Company of America.

Bradford Ross and *John L. Arrington, Jr.* for Oklahoma Natural Gas Company and Oklahoma Natural Gas Storage Company.

Charles R. Brown for the Staff of the Federal Power Commission.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

Ross, *Commissioner:*

This proceeding concerns an application by Natural Gas Pipeline Company of America (Natural) under Section 7(c) of the Natural Gas Act to lease and operate an underground gas storage field at Sayre, Oklahoma, belonging to Oklahoma Natural Gas Storage Company (Storage), a subsidiary of Oklahoma Natural Gas Company (Oklahoma Natural). Most of the field is to be used to hold Natural's gas; however, Storage will continue to use a portion of the field. This proceeding also involves a joint petition filed by Storage and Oklahoma Natural for a declaratory order determining that the activities and operations contemplated under the storage agreement described below will not subject either to our jurisdiction.[1]

Subject to certain conditions later described, all the parties including Staff agree that the public convenience and necessity require that Natural's application be granted. The only issue is whether, under the agreement, Storage would transport or sell gas to Natural in interstate commerce within the meaning of Section 1(b) or 7(c) of the Natural Gas Act for which a certificate would be required, in which event the petitioners would become natural-gas companies.

Natural's application and the joint petition were consolidated and a hearing was held on October 20, 1964. The Commission waived the intermediate decision procedure; briefs were exchanged; and the Commission requested supplementary briefs to consider the impact of the following recent cases upon the issues: *California* v. *Lo-Vaca Gathering Co.*, 379 U.S. 366; *F.P.C.* v. *Amerada Petroleum Corp.*, 379 U.S. 687; and *Transcontinental Gas Pipe Line Corporation*, 33 FPC 237, Opinion No. 449, Docket No. CP63–222, issued February 17, 1965. The supplemental briefs were filed, and the consolidated proceedings are now before the Commission for decision.

Sayre Storage Field is located near the Texas border in the southwest part of Oklahoma. It is now owned and operated by Oklahoma Natural for service to its Clinton system, which is located entirely within Oklahoma and not connected to its general system.[2]

The document which forms the basis of this proceeding is the "Storage, Operating and Service Agreement" dated September 19, 1963, as amended, which was executed between Natural and Oklahoma Natural. On March 17, 1964, Oklahoma Natural assigned all of its rights under the agreement to Storage. Under the agreement Natural will operate the field for the injection and withdrawal of gas for its own account and for that of Storage. Measure-

[1] They also requested exemption under Section 1(c) of the Act with respect to gas they contemplated buying from Natural, but they state that such exemption is now unnecessary since such purchases are no longer contemplated.

[2] Oklahoma Natural would convey to Storage all of the Clinton system storage, transmission and other properties, but would retain the distribution facilities.

ments are to be made and records are to be kept of the amount of gas injected, withdrawn and held in storage by each company.

Gas stored for Natural's account under the agreement will be purchased by Natural in northcentral Texas and in Oklahoma. It will flow westerly in Natural's 26-inch Oklahoma extension through Oklahoma and then will be diverted through Natural's 24-inch lateral to the Sayre Field. When Natural withdraws gas from the field for its own account it will flow back to the 26-inch Oklahoma extension and will continue westerly to the Texas Panhandle where it will join other sources of gas supply and flow north and east in Natural's main line.

The gas supply for the Clinton system now comes from fields all located in Oklahoma, and gas in excess of market requirements is injected into the Sayre Field and is available for withdrawal during peaking. Under the proposed arrangements the same gas supply will be used. Natural will inject the gas into Sayre storage for the account of Storage at a mutually agreed upon point, and upon request by Storage will redeliver it at a mutually agreed upon point of withdrawal at the field. Injections by Natural for Storage will be undertaken only at times consistent with Natural's operation of the field, as determined solely by Natural. The contract provides that volume of injections and withdrawals by Natural for Storage are limited to 3,000,000 Mcf annually and 20,000 Mcf daily. However, the parties anticipate that Storage's volume of injections and withdrawals will approximate 1.1 million Mcf annually. The contract provides that Storage may purchase gas from Natural for storage in Sayre and use in the Clinton system.[3]

With the consummation of the agreement, and for the first five years of Natural's operation of the field, Storage is obliged to maintain a minimum of 18,000,000 Mcf in the field as cushion gas, and minimum of 6,000,000 Mcf for the remainder of the term of the agreement. It is estimated that at least 20,000,000 Mcf is now in Sayre.[4] Upon termination of the agreement, which may be at any time within the 40-year maximum term, at Natural's discretion, both Natural and Storage are entitled to the volumes represented by their respective storage accounts. If the recoverable reserves on termination are less than the volumes in the storage account of Storage after Natural withdraws its gas, Natural pays Storage the difference at Natural's then effective commodity rate. If the recoverable reserve exceed Storage's account, Storage pays Natural for the difference at the same rate.

The record shows that Oklahoma Natural (and its successor, Storage) is regulated by the Oklahoma Corporation Commission. Storage desires to continue to use the Sayre storage field if this can be done without subjecting itself to regulation by the Federal Power Commission.

The Commission staff argues that jurisdiction follows the physical facts of gas flow, and that the appropriate test is engineering and scientific rather than legalistic or governmental citing *Connecticut Light & Power Co.* v. *F.P.C.*, 324 U.S. 515, and the *Lo-Vaca*, *supra*, and *Amerada*, *supra*, Supreme Court decisions. Staff points out that Natural's gas from out-of-state sources will be commingled in the Sayre field with Oklahoma gas injected by Storage, and that some of the Oklahoma gas will be resold by Natural in interstate commerce. Similarly, Staff argues that a portion of the gas injected by Natural will be resold by Storage to serve its Clinton system. Staff, therefore,

[3] Natural has stated it would file for appropriate authorization when it is ready to make such a sale.

[4] Section 4.3(c) provides that either party may terminate the agreement if it is determined that less than 20,000,000 Mcf of recoverable gas is in Sayre Storage Field.

concludes that Storage will be selling gas in interstate commerce to Natural, and, when it delivers gas to the Sayre field, will be transporting gas in interstate commerce. In addition, Staff contends that the cushion gas Natural will use and partially replace represents an exchange of gas, and hence a sale of gas subject to the jurisdiction of the Commission. In Staff's opinion, the *Transco, supra*, decision is *sui generis* and distinguishable because no question of jurisdiction over transportation was involved and because of greater specificity in the volumes of gas to be transported by the pipeline.

Natural, Oklahoma Natural and Storage argue that title to gas delivered by Storage to Natural remains with Storage and that the transaction is a bailment and not a sale even though the same physical volumes are not returned to Storage as were delivered. They point out that it is not necessary for a bailee of fungible goods to return the same goods but only units of like quality and quantity.

Essentially the determination of the jurisdiction issue in this proceeding depends on whether the proposed transaction, involves a sale of gas by Storage for resale in interstate commerce. The contractual label that the parties put upon the transaction is not controlling if it is merely an attempt to avoid the nomenclature of the statute while the parties engage in activities which Congress intended be regulated under the Natural Gas Act, and which would be so regulated if presented under an accurate label.

The basic consideration that must guide the Commission in deciding the jurisdictional question before us was laid down by the Supreme Court in *F.P.C.* v. *Transcontinental Gas Pipe Line Corp.*, 365 U.S. 1:

> * * * When Congress enacted the Natural Gas Act, it was motivated by a desire "to protect consumers against exploitation at the hands of natural gas companies." *Sunray Mid-Continent Oil Co.* v. *F.P.C.*, 364 U.S. 137, 147. To that end, Congress "meant to enact a comprehensive and effective regulatory scheme." *Panhandle Eastern Pipe Line Co.* v. *F.P.C.*, 332 U.S. 507, 520. See *Public Utilities Commission* v. *United Fuel Gas Co.*, 317 U.S. 456, 467. It is true, of course, the Congress did not desire comprehensive federal regulation; much authority was reserved for the States. But, it is equally clear that Congress did not desire that an important aspect of this field be left unregulated. See *Panhandle Eastern Pipe Line Co.* v. *F.P.C.*, *supra*. Therefore, when a dispute arises over whether a given transaction is within the scope of federal or state regulatory authority, we are not inclined to approach the problem negatively, thus raising the possibility that a "no man's land" will be created. Compare *Guss* v. *Utah Labor Board*, 353 U.S. 1. That is to say, in a borderline case where Congressional authority is not explicit we must ask whether state authority can practicably, regulate a given area and, if we find that it cannot, then we are impelled to decide that federal authority governs.

Viewed in this light our assertion of jurisdiction in *Lo-Vaca, supra*, filled a large gap in our control over sales by gas producers in interstate commerce. In that case the parties had provided in their contracts that, contrary to the physical facts, some of the gas commingled in the interstate pipeline was to be used in its compressor stations and thus, allegedly, not sold for resale. The Supreme Court in its decision affirming the Commission's jurisdiction emphasized that if the parties were thus free to allocate the gas by contract havoc would be raised with the federal regulatory scheme as construed in the *Phillips* case. A pipeline would be able to discriminate in favor of its "non-jurisdictional" customers and could immunize a particular producer supplier from the reach of federal regulation (379 U.S. at p. 370). The *Amerada* case

involving similar circumstances, was affirmed by the Supreme Court on the basis of *Lo-Vaca*.

Unlike *Lo-Vaca*, the proposed transaction presents no dangers to the federal regulatory scheme. Here with the exception of the cushion gas problem noted below, there is no sale and delivery to an interstate pipeline of gas which will be commingled with gas from other sources in carrying on the pipeline's general business of transporting and selling gas for resale in interstate commerce. Here there is simply an arrangement for sharing the storage field now owned by Oklahoma Natural for the benefit of both companies. Natural is provided with no opportunity to immunize any particular supplier from the reach of federal regulation. This is clear since Storage will not be supplying gas to Natural.

Again unlike *Lo-Vaca*, no facility used for transporting gas in interstate commerce will escape our jurisdiction. In the present proceeding, as in *Transco*, we have complete jurisdiction to grant or withhold permission to Natural to enter into the storage arrangement with Oklahoma Natural and Storage and a certificate is required from this Commission for its operation. If it had undesirable features we could impose conditions (as we do here), or we could limit the duration of the arrangement. As it is, there is no dispute that the arrangement if lawful is in the public interest, and should be approved. In any future rate case or investigation Natural will, of course, be required to justify its storage costs in its cost of service by accepted standards. Thus, the ultimate consumers served through Natural are fully protected without federal jurisdiction over Storage or Oklahoma Natural.

We conclude that Storage's joint use of the Sayre storage field with Natural does not constitute the sale or transportation of gas within the meaning of the Gas Act. In so concluding, we rely on the particular facts of this case which make clear that our jurisdiction over Storage would not further the objectives of the Gas Act. As the Supreme Court held in *F.P.C.* v. *Transcontinental Gas Pipe Line Corp.*, *supra*, in a borderline situation this fact is controlling. We are satisfied that if Storage or Oklahoma Natural's operations in this case resulted in any evasion of the Federal regulatory pattern under the Natural Gas Act that we would have jurisdiction over them. However, as we stated in *Transco*, *supra*, not every transaction which involves commingling of gas from different sources *per se* requires a finding of federal jurisdiction.

Insofar as the proposal relates to cushion gas, the jurisdictional question is less clear. Initially, Natural will have the right to the use of 20,000 Mcf presently estimated to be in Sayre. Additionally, Storage is obliged under the agreement to maintain a minimum of 18,000,000 Mcf in Sayre as cushion for the first five years of operations under the agreement, and a minimum of 6,000,000 Mcf thereafter. Up to this point, we are satisfied that the proposal does not have the effect of transforming Storage into a natural gas company.

It would serve no purpose to insist, as a condition precedent to a finding on the jurisdictional question, that Storage initially withdraw all the gas in Sayre only to have Natural replenish the supply. In our opinion, the gradual withdrawal of cushion gas by Storage and replacement by Natural over a relatively brief period is but an integral and reasonable part of the overall agreement of the parties to share a storage facility. As Staff points out:

> the significant point is that the proposed transaction enables Natural to have a highly flexible storage operation immediately available for its use. But for the proposed transaction, it would take Natural a relatively long period of time to inject volumes of "cushion gas" necessary to provide Natural with the desired volumes of working gas

Similarly, Storage's obligation to maintain a minimum of 6,000,000 Mcf in Sayre as cushion gas for the term of the agreement is another integral feature of the parties' basic intent to share a storage facility. By the fifth year of operations, Storage plans to use 14.47 percent of the capacity of Sayre and Natural the remaining 85.53 percent. In volumetric terms, Storage proposes to inject and withdraw 1.1 million Mcf and Natural 6.5 million Mcf, both on an annual basis. The cushion gas required to operate the field at this capacity is 42 million Mcf.[5]

It is apparent that the approximately 6,000,000 Mcf which Storage is required to maintain as cushion is directly proportional to its intended use of the Sayre field. Accordingly, it is appropriate to treat this 6,000,000 Mcf of gas as being used in connection with Storage's intrastate operations rather than the interstate operations of Natural. This feature of the agreement, we believe, is closely analogous to that presented in the *Transco* case. In both situations there is no delivery of gas to an interstate pipeline which the pipeline can use for its own operations and which it is required to pay for. The situation is thus distinguishable from the *Lo-Vaca* situation where, for a substantial fee, both title and the beneficial use of certain volumes of gas were being transferred to the pipeline.

Using these same two cases as precedent, however, we find that those provisions of the agreement which provide that if Storage chooses to store gas in the field in excess of its intended proportionate use of the field, Natural will pay therefor as cushion gas, constitutes a sale of gas in interstate commerce. The agreement provides that Storage may store 12,000,000 Mcf in Sayre over and above the 6,000,000 Mcf related to its intended use and that if it does so, Natural's payments for use of the field will be proportionately increased. At the specified rate of $595 per month for 1,000,000 Mcf for cushion gas, Natural would be paying 28¢ per Mcf for gas used as cushion over the 40-year lease period. Additionally, we note that assuming Storage fully exercises its option, Natural will be paying nearly $3.5 million dollars for such gas—over 20 percent of the rental fee for the use of the Storage field.

No reason has been advanced by the parties to show why this aspect of the proposal is incidental to the sharing of Sayre field. Since this aspect is not merely a conventional arrangement nor related to the basic purpose of the transaction, the situation is outside the scope of the rationale of *Transco, supra*, but rather constitutes a sale for all practical purposes. We, therefore, find that the exercise by Storage of its option to maintain in excess of 6,000,000 Mcf in Sayre storage field and be compensated by Natural therefor would constitute a sale of gas to Natural in interstate commerce within the meaning of Sections 1(b) and 7(c) of the Natural Gas Act.

The question remains whether this arrangement whereby Natural will be paying Storage for the use of cushion gas as part of its interstate activities is removed from the category of a "sale" because at the end of the 40-year lease period (plus any renewal thereof) Storage will retain title to an equivalent amount of gas. Recognizing that as a matter of contract law the transaction might well be characterized as a bailment for hire, we think it clear that insofar as its status under the Natural Gas Act is concerned, it must be construed as a sale. See *Federal Power Commission* v. *Marr*, 311 U.S. 381, where a sale of a long-term lease of land containing proven gas reserves was construed as constituting a sale of gas. The situation here is analogous to the situation where a pipeline takes gas in one part of its line in exchange for a consideration of a promise to provide the seller with an equivalent

[5] These data are contained in official working papers furnished by the parties to Staff of which we take official notice.

amount of gas at another point on the pipeline. Such exchanges have always been construed as involving sales and resales of gas.[6] The fact that the pipeline's agreement to exchange gas here is temporal rather than geographical does not change the jurisdictional result.

In view of the foregoing, we conclude that the instant transaction does not involve the transportation or sale of gas in interstate commerce by Oklahoma Natural or Storage, or either of them, provided that Storage does not maintain gas in the Sayre storage field, and be compensated therefor by Natural, in a volume which exceeds Storage's intended proportionate use of the field.

The Commission further finds:

(1) Natural Gas Pipeline Company of America, a Delaware corporation having its principal place of business at Chicago, Illinois, is engaged in the transportation of natural gas in interstate commerce and the sale in interstate commerce of natural gas for resale for ultimate public consumption and is a "natural-gas company" within the meaning of the Natural Gas Act.

(2) The activities and operations contemplated by the transactions proposed herein will not subject either Oklahoma Natural or Storage to the jurisdiction of the Federal Power Commission, with the exception of the provisions relating to gas which Storage may provide in excess of that volume (6,000,000 Mcf) needed as a cushion for Storage's intended use of the field, for which Storage would be compensated by Natural.

(3) The facilities to be constructed and operated by Natural as hereinbefore described and as more fully set forth in Natural's application and the record in this proceeding are proposed to be used by Natural in the transportation of natural gas in interstate commerce, subject to the jurisdiction of this Commission, and the construction, and operation thereof by Natural are subject to the requirements of Section 7(c) of the Natural Gas Act.

(4) Natural is able and willing to do the acts and perform the services proposed, and to conform to the provisions of the Natural Gas Act as amended and the Rules and Regulations of the Commission thereunder.

(5) The acquisition by Natural of all rights, properties and interests of Oklahoma Natural in and to the Sayre underground gas storage field located in Beckham County, Oklahoma, necessary or convenient to be exercised in the operation thereof by Natural for the underground storage of gas, the construction and operation of facilities and the operation by Natural of the Sayre underground gas storage field for the injection and withdrawal of gas all as more fully set forth in Natural's application and the record in this proceeding are required by the public convenience and necessity and a certificate of public convenience and necessity therefor should be issued as hereinafter ordered and continued.

The Commission orders:

(A) A certificate of public convenience and necessity is hereby issued, upon the terms and conditions of this order and subject to all pertinent provisions of the Natural Gas Act and the Commission's Regulations thereunder, authorizing Natural to acquire all of the rights, properties and interest of Storage Company in and to the Sayre underground storage field located in Beckham County, Oklahoma, necessary or convenient to be exercised in the operation thereof by Natural for the underground storage, the construction and operation of facilities and the operation by Natural of Sayre underground gas

[6] *Oklahoma Natural Gas Co.*, 23 FPC 291.

storage field for the injection and withdrawal of gas all as more fully set forth in Natural's application and the record in this proceeding.

(B) The certificate of public convenience and necessity issued by Paragraph (A) above is subject to the following conditions:

(1) The combined inventory of Natural and Storage Company shall not exceed 56 billion cubic feet of natural gas without having first received further authorization from the Commission and provided that, if any year prior to and including 1969, or any portion of any such year, should become a test year in any subsequent rate proceeding wherein the justness or reasonableness of Natural's existing or proposed rates is at issue, not more than 32.5 billion cubic feet of natural gas which might be stored in Sayre Field for the account of Natural may be included in Natural's rate base, unless the Commission specifically approves the inclusion in Natural's rate base of a greater quantity based on a showing by Natural that any volume in excess of such amount is then used or useful in its test year operations.

(2) Natural shall construct the proposed facilities, rework the 26 gas wells and drill one additional gas well as described in its application within one year of the issuance of this order.

(C) The Joint Petition filed by Oklahoma Natural and Storage for a declaratory order determining the jurisdictional status of petitioners pursuant to the storage agreement is granted and the Commission concludes that neither petitioner will become a natural gas company within the meaning of the Natural Gas Act; provided that petitioners, or either of them, do not maintain in excess of 6,000,000 Mcf of gas in the Sayre storage field on or after the first five years of joint operation with Natural for which additional amounts of gas petitioners or either of them are directly or indirectly compensated by Natural.

(D) In the event Oklahoma Natural or Storage maintain gas in Sayre storage field in excess of that specified in paragraph (C) *supra*, and are directly or indirectly compensated therefor by Natural, they shall file with the Commission an appropriate application for a certificate to transport and sell gas in interstate commerce, as required by Section 7(c) of the Natural Gas Act and the Commission's rules and regulations thereunder.

(E) The Joint Application for exemption from the Natural Gas Act filed by Oklahoma Natural and Storage is hereby dismissed without prejudice to its renewal if they should propose to purchase gas from Natural.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

PANHANDLE EASTERN PIPE LINE COMPANY, DOCKET NOS. CP66-33 AND CP66-34

ORDER AUTHORIZING EXPORTATION OF NATURAL GAS AND CANCELLING DOCKET NUMBER

(Issued November 8, 1965)

On July 29, 1965, Panhandle Eastern Pipe Line Company (Applicant) filed in Docket No. CP66-33 an application, as supplemented on September 23, 1965, pursuant to Section 3 of the Natural Gas Act for authorization to export

natural gas from the United States to Canada, all as more fully set forth in the application, as supplemented, in this proceeding.*

Applicant proposes to export up to 3,000,000 Mcf of natural gas per year for sale to Tecumseh Gas Storage, Limited (Tecumseh). The proposed sale is for a two year period with any make-up gas to be delivered during the third year. Total sales are limited to 6,000,000 Mcf. The subject proposal is to be accomplished through Applicant's existing facilities under the Detroit River, at the international boundary, connecting with those facilities of Union Gas Company of Canada, Limited (Union). Applicant will deliver the gas to Union and Union will transport such gas for delivery to Tecumseh's storage system. Tecumseh will utilize the gas as base storage.

In each year Applicant will deliver 1,000,000 Mcf of gas during the period November 1 through March 31 and the remaining 2,000,000 Mcf will be delivered during the period April 1 through October 31. Applicant may offer Tecumseh up to 20,000 Mcf per day, but Tecumseh shall not be obligated to take delivery of more than 10,645 Mcf of gas per day. Applicant and Tecumseh have entered into an agreement, dated April 6, 1965, providing for the proposed sale at a base rate of 39 cents per Mcf (14.73 psia) in United States coin, subject to certain adjustments set forth in said agreement. Applicant estimates the annual net operating income for the proposed sale to be $184,308.

Applicant states that the sales will be completely interruptible on a daily basis and curtailable to the extent of 20 percent on an annual basis.

On July 29, 1965, Applicant filed in Docket No. CP66–34, in accordance with Executive Order No. 10485, an application for a presidential permit authorizing the operation of existing facilities for the export of natural gas to Tecumseh. Such application will be considered as an application to amend further the amended permit, as further amended, in Docket No. G–10798. Accordingly, Docket No. CP66–34 should be cancelled. Said amended permit, as further amended, will be released concurrently with the subject order and with the order in Docket No. CP66–48.

Notice of the filing of the instant application was issued on August 9, 1965. This notice fixed September 7, 1965, as the last day for filing protests or petitions to intervene. No protests or petitions to intervene have been received herein. Opportunity for hearing has been given by the issuance of said notice and the publication thereof in the Federal Register on August 14, 1965 (30 F.R. 10173).

The Commission finds:

The exportation of natural gas by Applicant, Panhandle Eastern Pipe Line Company, as hereinabove described and as set forth in the application, as supplemented, in Docket No. CP66–33, will not be inconsistent with the public interest within the meaning of Section 3 of the Natural Gas Act provided that said exportation be on the terms and conditions hereinafter set forth:

(a) Applicant shall file statements or reports with the Commission from time to time under oath and in such details as the Commission may require with respect to the whole or any part of the instant export operation.

(b) The authorization granted herein is not transferable or assignable and shall remain in full force and effect only so long as Applicant continues the

* On August 12, 1965, Applicant filed in Docket No. CP66–48 a related application pursuant to Section 7(c) of the Act for a certificate of public convenience and necessity authorizing the transportation of natural gas in order to export said gas for sale to Tecumseh Gas Storage, Limited. The order granting such a certificate in said docket will be issued concurrently with the subject order, *infra*, p. 1268.

acts or operations herein authorized in accordance with the terms and conditions herein set forth.

(c) The authorization granted herein shall automatically terminate upon the termination or expiration of the April 6, 1965, contract, attached as an exhibit to the application in this proceeding.

(d) Applicant shall not, during the term of the authorization granted by this order, materially change or alter its export operations without first obtaining the permission and approval of the Commission.

(e) In the event that Applicant should abandon or permanently cease for any reason whatsoever all or any part of the instant export operation prior to the termination date of the contract described in (c) hereof, Applicant shall forthwith notify the Commission of said fact and the reason therefor.

(f) The authorization granted herein should be conditioned upon Applicant's obtaining any related necessary authorizations from the National Energy Board of Canada.

(g) The maximum annual volume and maximum daily volumes exported for sale to Tecumseh should not exeed 3,000,000 Mcf and 20,000 Mcf, respectively, and the total volumes to be exported under the instant authorization should not exceed 6,000,000 Mcf.

(h) Applicant should inform the Commission of the date the total volume of 6,000,000 Mcf has been delivered and deliveries have ceased, under the instant authorization, within 20 days of such date.

(i) Applicant should curtail or interrupt service to Tecumseh to the extent required to meet existing or future contracted maximum delivery obligations for firm service to its customers, and Applicant should not give priority to Tecumseh for additional gas under this contract at the expense of firm customers desiring to acquire additional gas to meet any future increases in their requirements.

The Commission orders:

(A) Authorization is granted to Applicant to export natural gas from the United States to Canada, as hereinabove described and as set forth in the application, as supplemented, in Docket No. CP66–33, upon the conditions herein set forth and subject to the provisions of the Natural Gas Act and the Commission's Regulations issued thereunder.

(B) The authorization granted herein is conditioned upon Applicant's obtaining any related necessary authorizations from the National Energy Board of Canada.

(C) The maximum annual volume and maximum daily volumes exported for sale to Tecumseh shall not exceed 3,000,000 Mcf and 20,000 Mcf, respectively, and the total volumes to be exported under the instant authorization shall not exceed 6,000,000 Mcf.

(D) Applicant shall inform the Commission of the date the total volume of 6,000,000 Mcf has been delivered and deliveries have ceased, under the instant authorization, within 20 days of such date.

(E) Applicant shall curtail or interrupt service to Tecumseh to the extent required to meet existing or future contracted maximum delivery obligations for firm service to its customers, and Applicant shall not give priority to Tecumseh for additional gas under this contract at the expense of firm customers desiring to acquire additional gas to meet any future increases in their requirements.

(F) Docket No. CP66–34 is cancelled.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

PANHANDLE EASTERN PIPE LINE COMPANY, DOCKET NO. CP66-48

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued November 8, 1965)

On August 12, 1965, Panhandle Eastern Pipe Line Company (Applicant) filed in Docket No. CP66-48 an application, as supplemented on September 23, 1965, pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the transportation of natural gas in order to export said gas for sale to Tecumseh Gas Storage, Limited, (Tecumseh) all as more fully set forth in the application, as supplemented, in this proceeding.*

Applicant proposes to transport natural gas in order to export and sell to Tecumseh 3,000,000 Mcf per year for a two year period with any make-up gas to be delivered during the third year. Total sales are limited to 6,000,000 Mcf. The proposed export and sale is to be accomplished through Applicant's existing facilities under the Detroit River, at the international boundary, connecting with those facilities of Union Gas Company of Canada, Limited (Union). Tecumseh will utilize the gas as base storage. Sales to Tecumseh will be completely interruptible on a daily basis and curtailable to the extent of 20 percent on an annual basis.

Applicant will deliver the subject gas to Union at the above-described interconnection of the two systems and Union will transport such gas for delivery to Tecumseh's storage system.

Applicant and Tecumseh have entered into an agreement, dated April 6, 1965, providing for the proposed sale.

No additional facilities will be required by Applicant.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application, as supplemented, has been filed.

At a hearing held on November 4, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application, supplement and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Panhandle Eastern Pipe Line Company, a Delaware corporation having its principal places of business in New York City, New York, and in Kansas City, Missouri, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of October 17, 1945, in Docket No. G-254 (4 FPC 1081).

(2) The transportation of natural gas hereinbefore described, as more fully described in the application, as supplemented, in this proceeding, is to be in

* On July 29, 1965, Applicant filed related applications pursuant to Section 3 of the Natural Gas Act and Executive Order No. 10485 in Docket Nos. CP66-33 and CP66-34, respectively, requesting authorization to export natural gas and to operate the necessary existing facilities at the international boundary between the United States and Canada for the export of natural gas. The application in Docket No. CP66-34 will be considered as an application to amend further the amended permit, as further amended, in Docket No. G-10798. Said amended permit, as further amended, and the export authorization requested in Docket No. CP66-33 will be issued concurrently with the subject order, *supra*, p. 1265.

interstate commerce, subject to the jurisdiction of the Commission, and such transportation by Applicant is subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The transportation of natural gas by Applicant is required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (c)(3) and (e) of Section 157.20 of such Regulations.

(6) The certificate issued hereinafter should be conditioned upon Applicant's obtaining any related necessary authorizations from the National Energy Board of Canada.

The Commission orders:

(A) A certificate of public convenience and necessity is issued authorizing Applicant, Panhandle Eastern Pipe Line Company, to transport natural gas in order to export natural gas for sale to Tecumseh as hereinbefore described, all as more fully described in the application, as supplemented, in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (c)(3) and (e) of Section 157.20 of such Regulations.

(C) The certificate issued by paragraph (A) above is conditioned upon Applicant's obtaining any related necessary authorizations from the National Energy Board of Canada.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

BILL D. SHORT, PROJECT NO. 1944

ORDER ISSUING NEW LICENSE (MINOR)

(Issued November 8, 1965)

Application was filed on March 5, 1965, by Bill D. Short (Applicant) of Baranof, Alaska, for a new license under the Federal Power Act (Act) for constructed minor Project No. 1944, located on Baranof Island and Baranof River, a tributary of Warm Spring Bay, in the First Judicial Division, Alaska, and affecting lands of the United States within the Tongass National Forest.

The last license for the project, which was issued on May 7, 1959, 21 FPC 641, jointly to Applicant herein and Donald L. McDaniel for a period of 5 years, effective as of June 23, 1958, expired on June 22, 1963. By letter from Applicant dated August 27, 1963, we were advised that the partnership between Applicant and Donald L. McDaniel had been dissolved, and that any new license for the project should be issued to the Applicant herein solely. The energy generated by the project is used at tourist cabins and other buildings owned by Applicant.

The Secretary of the Army and the Chief of Engineers offer no objection to the issuance of a new license for the project.

The Department of the Interior, in reporting on the application, has advised that the continued operation of the project would have no effect upon game and fur animals, and no fish passage facilities or other special measures for fish and wildlife are necessary.

The Chief, Forest Service, acting for the Secretary of Agriculture, who has supervision over the Tongass National Forest, has advised that the project would not interfere or be inconsistent with the purposes for which the Tongass National Forest was created or acquired, provided any new license for the project is made subject to the same provisions for the protection of National Forest lands as were included in the last license for the project. The license conditions herein are identical to those included in the last license.

The Department of Health, Education, and Welfare, has advised that the present project operation does not contribute to water quality problems nor can it be expected to create such problems in the future, and any new license for the project will have no adverse effect on water quality.

The Department of Fish and Game, State of Alaska, has advised that the project will not adversely affect the fishery values of Warm Spring Bay and Baranof Lake, and the agency therefore has no comments, recommendations or objections to the project from a conservation point of view.

Annual charges under the last license have been paid through the expiration date of license. Since the application for new license recites that the project works and lands are substantially unchanged, this new license fixes the same annual charges as that fixed in the expired license, namely, $5.00 for reimbursing the United States for the costs of administration of Part I of the Act, and $5.00 for recompensing the United States for the use, occupancy, and enjoyment of its lands by the project.

In our order on rehearing issued February 17, 1965, in *Wisconsin Power & Light Company, Project No. 2347, et al.*, 33 FPC 275, we stated that we would have no objection to the issuance of licenses for minor projects without waiving Sections 14 and 15 of the Federal Power Act and the other provisions of the Act necessary to the effectuation of those sections, provided the minor project applications are timely supplemented pursuant to Section 4.50 of our Regulations under the Act (18 CFR § 4.50), which relates to applications for major projects. In the event the Applicant herein wishes a license in which those provisions of the Act are not waived he should so advise us within 30 days from the date of issuance of this order and file his supplemental application within 30 additional days thereafter.

The Commission finds:

(1) Applicant is a citizen of the United States and has submitted satisfactory evidence of compliance with the requirements of all applicable State laws insofar as necessary to effectuate the purposes of a license for the project.

(2) Public notice of the filing of the application has been given. No protests or petitions to intervene have been received. No conflicting application is before the Commission.

(3) The project does not affect a Government dam, nor will the issuance of a license therefor, as hereinafter provided, affect the development of any water resources for public purposes which should be undertaken by the United States.

(4) Subject to the terms and conditions hereinafter imposed, the project will be best adapted to a comprehensive plan for improving or developing

a waterway or waterways for the use or benefit of interstate or foreign commerce, for the improvement and utilization of water-power development, and for other beneficial public uses, including recreational purposes.

(5) The issuance of a license for the project will not interfere or be inconsistent with the purposes for which the Tongass National Forest was created or acquired.

(6) The amount of annual charges to be paid under the new license for the purpose of reimbursing the United States for the costs of administration of Part I of the Act, and for recompensing it for the use, occupancy, and enjoyment of its lands by the project is reasonable as hereinafter fixed and specified.

(7) It will be in the public interest to waive pursuant to Section 10(i) of the Act the terms and conditions contained in the following sections of Part I of the Act:

Sections 4(b), except the second sentence thereof; 4(e), insofar as it relates to approval of plans by the Chief of Engineers and the Secretary of the Army and to public notice; 6, insofar as it relates to public notice and to the acceptance and expression in the license of terms and conditions of the Act which are hereinafter waived; 10(c), insofar as it relates to deprication reserves; 10(d); 10(f); 11; 12; 14, except insofar as the power of condemnation is reserved; 15; 19; 20; 22; and 23(a), insofar as it relates to the determination of fair value.

(8) Revised Exhibit K (FPC No. 1944–1) on file with the Commission and included in the application for new license by reference thereto, conforms to the Commission's rules and regulations and should be reapproved as part of this new license.

The Commission orders:

(A) This new license is hereby issued to Bill D. Short, of Baranof, Alaska, under Sections 4(e) and 10(i) of the Federal Power Act, for a period of 5 years, effective as of June 23, 1963, for the continued operation and maintenance of minor Project No. 1944, located on Baranof Island and Baranof River, a tributary of Warm Spring Bay, Alaska, and affecting lands of the United States within the Tongass National Forest, subject to the terms and conditions of the Act insofar as not expressly waived herein, which Act is hereby incorporated as a part of this new license, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) Project No. 1944 consists of:

(i) All lands constituting the project area and enclosed by the project boundary or the limits of which are otherwise defined.

(ii) A concrete weighted pipe intake, 1578 feet of woodstave pipe, a frame powerhouse with installation of about 4 (four) horsepower; and short distribution lines; and all other structures, fixtures, equipment or facilities used or useful in the operation and maintenance of the project and located on the project area; and all rights and interests therein, the possession of which is necessary in the maintenance and operation of the project.

(C) This license is also subject to the terms and conditions set forth in Form L–7, December 15, 1953, entitled "Terms and Conditions of License for Minor Project Affecting Lands of the United States", (17 FPC 486) which terms and conditions, designated as Articles 1 through 14, are attached hereto and made a part hereof; and subject to the following special conditions set forth herein as additional articles:

Article 15. The Licensee shall comply with such reasonable modifications of the project structures and operation in the interest of fish and wildlife resources as may be hereafter prescribed by the Commission upon the recommendation of the Secretary of the Interior.

Article 16. The Licensee is hereby limited under the terms of this license to diversion from Baranof River of one (1) cubic foot of water per second, said amount being the approximate capacity of the constructed project works. In case a license for more complete development of the stream is granted, such license shall contain a provision safeguarding the Licensee in his right to divert, during the life of this license, the said one (1) cubic foot per second of water except when the natural flow of the stream falls below eight (8) cubic feet per second, at which time the Licensee shall be entitled to excess of natural flow over the first seven (7) cubic feet previously assigned under the license for Project No. 1185; provided, that should an applicant for a license for the more complete development so elect he may be required, in lieu of releasing said one (1) cubic foot per second of water to flow down Baranof River for the use of the Licensee, to furnish the Licensee free of charge, at the townsite boundary, five (5) continuous electrical horsepower or such part thereof and at such times as the Licensee may demand, and the Licensee shall accept this provision in lieu of the one (1) cubic foot of water herein before provided.

Article 17. The Licensee shall pay to the United States the following annual charges, effective as of June 23, 1963:

(i) For the purpose of reimbursing the United States for the costs of administration of Part I of the Act, $5.00; and

(ii) For the purpose of recompensing the United States for the use, occupancy, and enjoyment of its lands, $5.00.

(D) The revised exhibit designated in finding (8) above is hereby reapproved and made a part of this new license.

(E) The terms and conditions of the Act, which it has been found above to be in the public interest to waive, are hereby excluded from this license.

(F) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license. In acknowledgement of the acceptance of this license, it shall be signed for the Licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

NORTHERN NATURAL GAS COMPANY. DOCKET NO. CP66-75

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued November 9, 1965)

On September 15, 1965, Northern Natural Gas Company (Applicant) filed in Docket No. CP66-75 an application pursuant to Section 7(c) of the Natural Gas Act, as implemented by Section 157.7(b) of the Regulations under the Act, for a certificate of public convenience and necessity authorizing the

construction during the calendar year 1966 and the operation of certain facilities to enable Applicant to take into its certificated main pipeline system natural gas which will be purchased from producers thereof, all as more fully set forth in the application in this proceeding.

The purpose of this "budget-type" application is to augment Applicant's ability to act with reasonable dispatch in contracting for and connecting to its pipeline system new supplies of natural gas in various producing areas adjacent to said system. Additionally, Applicant will construct and operate horsepower and pipeline additions to present gathering systems.

The total cost of the facilities covered by this application will not exceed a maximum of $5,000,000, with no single project to exceed a cost of $500,000, which costs are proposed to be financed from cash on hand or from funds generated from operations.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on November 4, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Northern Natural Gas Company, a Delaware corporation having its principal place of business in Omaha, Nebraska, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of April 6, 1943, in Docket No. G-280 (3 FPC 967).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit within 60 days after the expiration of the authorization granted hereinafter, a statement in compliance with subparagraph (3) of the Section 157.7(b) of the Commission's Regulations under the Natural Gas Act.

(6) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(7) The authorization hereinafter granted should be limited to construction during the calendar year 1966 and the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $5,000,000, with no single project to exceed a cost of $500,000.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity is issued authorizing Applicant, Northern Natural Gas Company, to construct during the calendar year 1966, the proposed facilities hereinbefore described, as more fully described in the application in this proceeding, and to operate such facilities only to take natural gas supplies from producers who have received authorization from the Commission to sell natural gas to said Applicant.

(B) Applicant shall submit within 60 days after the expiration of the authorization granted by paragraph (A) above a statement in compliance with subparagraph (3) of Section 157.7(b) of the Commission's Regulations under the Natural Gas Act.

(C) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(D) The authorization granted in paragraph (A) above is limited to construction during the calendar year 1966, and the total expenditures for facilities to be constructed thereunder are limited to a maximum of $5,000,000 with no single project to exceed a cost of $500,000.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

PANHANDLE EASTERN PIPE LINE COMPANY, DOCKET NO. CP65-255

ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued November 9, 1965)

On August 20, 1965, Panhandle Eastern Pipe Line Company (Applicant), filed in Docket No. CP65-255 an application to amend the order of the Commission issued in said docket June 28, 1965, 33 FPC 1295, which order authorized an expansion program which would increase Applicant's peak day capacity by approximately 235,000 Mcf per day and enable it to provide increased volumes of natural gas to its existing customers for the 1965-1966 winter season, as more fully set forth in the application to amend.

Applicant seeks amendment of said order so as to authorize Applicant to provide increased summer and winter contract demand quantities to Missouri Power and Light Company, City of Morton, Illinois, Village of Westville, Illinois, Bowling Green Gas Company, The Gas Service Company and Michigan Gas Utilities Company as set forth in Schedule A attached hereto, and to provide up to 1,500 Mcf per day to fuel turbine powered generators of the Toledo Edison Company. In order to provide service to the Toledo Edison Company, Applicant proposes to substitute 6.1 miles of 8-inch pipe rather than the 6-inch pipe originally authorized in Defiance, Ohio, lateral and install a metering and regulating station. The additional cost attributable to the line substitution is estimated at $39,000, while the cost of the metering and regulating station is estimated at $20,000.

The additional volumes proposed to be delivered to The Gas Service Company will require the construction of an additional delivery point in Marion County, Missouri at an estimated cost of $20,000. Applicant also proposes the addition of five miles of new 6-inch lateral line to Fortville, Indiana, because of a change in the sales distribution location from that originally anticipated and thereby provide continued and uninterrupted service to the Greenfield Gas Company. The cost of the 6-inch lateral is estimated at $151,000.

The cost of the additional facilities proposed in this amendment is estimated at $230,000.

Due notice of the filing of the application to amend and opportunity for hearing thereon have been given by publication in the Federal Register on September 4, 1965, (30 F.R. 11358). No protest, petition to intervene, or notice of intervention has been filed in the proceeding concerning this amendment.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act, and the public convenience and necessity require that the Commission's order issued June 28, 1965, in Docket No. CP65-255 be amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order, issued June 28, 1965, in Docket No. CP65-255 is amended by authorizing Panhandle Eastern Pipe Line Company to (1) increase summer and winter contract demand quantities to Missouri Power and Light Company, City of Morton, Illinois, the Village of Westville, Illinois, Bowling Green Gas Company, The Gas Service Company and Michigan Gas Utilities Company, as set forth in Schedule A attached, (2) provide up to 1,500 Mcf per day to Toledo Edison Company to fuel turbine powered generators, substitute 6.1 miles of 8-inch pipe in lieu to the 6-inch pipe originally authorized and construct and operate a delivery point in Defiance County, Ohio, (3) construct and operate an additional delivery point in Marion County, Missouri, for the additional volumes of gas to be delivered to The Gas Service Company in (1) above and (4) construct and operate an additional five miles of 6-inch lateral line to Fortville, Indiana, to provide service to the Greenfield Gas Company, as hereinbefore described and as set forth in the subject application to amend.

(B) Applicant shall curtail or interrupt service to Toledo Edison Company herein authorized to the extent required to meet existing or future contracted maximum delivery obligations for first service to its customers; and shall not give priority to Toledo for additional gas under the contract at the expense of firm customers desiring to acquire additional gas to meet any future increases in their requirements.

(C) In all other respects said order shall remain in full force and effect.

(D) The grant of the certificate issued hereby for the sale of gas to Toledo Edison Company shall not be construed as determining for the purpose of any future rate proceeding involving Applicant the matter of the proper costs to be allocated to such sale undertaken pursuant to the authorization granted herein.

PORTLAND GENERAL ELECTRIC COMPANY, PROJECT NO. 2195

ORDER EXTENDING TIME FOR FILING PROJECT SPILLWAY PLANS

(Issued November 9, 1965)

On September 13, 1965, Portland General Electric Company, licensee for Project No. 2195, filed application for a two-month extension of the time specified in Article 36 of its license within which to submit for Commission approval plans to increase the spillway capacity of the River Mill Development of the project to 150,000 cubic feet per second.

Article 36 was included in the license by Amendment No. 3, issued April 23, 1965, 33 FPC 876, and required the licensee to submit such plans within 6 months of the date of the order, namely by October 23, 1965.

In support of its application, the licensee advises that immediately after the issuance of the amendment, it employed a firm of consulting engineers to prepare plans, specifications and cost estimates for an increase in the River Development spillway capacity; that the firm has submitted three proposed plans and is studying four more; and it now appears that all of the plans will not be available to the licensee for study and filing by the licensee within the time prescribed in Article 36 of the license.

The Commission finds:

In the circumstances, it will not be incompatible with the public interest to grant the extension as applied for.

The Commission orders:

The time specified in Article 36 of the license for Project No. 2195 within which to submit for Commission approval plans to increase the spillway capacity of the River Mill Development of the project is hereby extended to and including December 23, 1965.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

ROY M. HUFFINGTON, INC., ET AL., DOCKET NO. G–18680

ORDER ACCEPTING OFFER OF SETTLEMENT, REQUIRING FILING OF CONTRACT AMENDMENT, AND PROVIDING FOR REFUNDS

(Issued November 9, 1965)

On July 19, 1965, Roy M. Huffington, Inc., *et al.* (Huffington) filed an offer of settlement in this proceeding pursuant to Section 1.18(e) of the Commission's Rules of Practice and Procedure involving a sale of natural gas to Transcontinental Gas Pipe Line Corporation (Transco) made under Huffington's FPC Gas Rate Schedule No. 1, in the South Intracoastal City Field, Vermilion Parish, Louisiana. Huffington initiated the sale under the authority of an unconditioned temporary certificate, and the proceeding involving its application for a permanent certificate of public convenience and necessity was consolidated with the proceedings in *Union Texas Petroleum, et al.*, Docket No. G–13221, *et al.*, in which we issued our Opinion No. 436 and Opinion No. 436–A (32 FPC 254, 952).

Under the terms of its offer, Huffington proposes to reduce its presently effective rate of 22.8¢ per Mcf to the 20.0¢ per Mcf rate required by Opinion No. 436. All escalation provisions will be removed and the settlement price will be effective for the remaining term of the contract.

Huffington will refund approximately $10,200, exclusive of interest, to Transco, which is the estimated amount collected subject to refund above the settlement rate from July 23, 1964, the date of issuance of Opinion No. 436 to the date of issuance of this order, and its revenues will be reduced approximately $9,000 annually below its presently effective rate at the present volume of delivery.

Upon approval by the Commission of its offer of settlement, Huffington proposes to withdraw its appeal from Opinion Nos. 436 and 436–A now pending as Case No. 7912 in the United States Court of Appeals for the Tenth Circuit.

No protests or objections to the offer of settlement have been filed by any party to this proceeding.

While we find that acceptance of Huffington's offer of settlement is in the public interest, such acceptance is without prejudice to any finding or order of the Commission in any future proceedings, including area rate or other similar proceedings, involving Huffington's rate.

The Commission finds:

The proposed settlement of the above-designated proceedings, on the basis described herein, as more fully set forth in the offer of settlement filed with

the Commission by Huffington on July 19, 1965, is in the public interest and appropriate to carry out the provisions of the Natural Gas Act and should be approved and made effective as hereinafter ordered.

The Commission orders:

(A) The offer of settlement filed with the Commission by Huffington on July 19, 1965, is hereby approved in accordance with the provisions of this order.

(B) Huffington shall file, within 30 days from the date of issuance of this order, an executed contractual amendment to its FPC Gas Rate Schedule No. 1, eliminating all escalation and tax reimbursement provisions therefrom and a notice of change in rate to the settlement rate of 20.0¢ per Mcf at 15.025 psia as specified in its offer of settlement. The notice of change and contractual amendment shall be submitted in accordance with Part 154 of the Commission's Regulations under the Natural Gas Act.

(C) Huffington shall compute the difference between the rate collected and the settlement rate for the period from July 23, 1964, to the date of this order for sales of natural gas to Transco, and within 30 days from the date of this order shall submit a report to the Commission, and serve a copy on Transco, setting out the amount of refunds it has computed it is obligated to make (showing separately the principal and interest) the basis used for such determination and the period covered.

(D) Huffington shall, within 45 days from the date of issuance of this order, refund with applicable interest to the date of refund to Transco the monies computed in accordance with paragraph (C) above, and shall within 10 days thereafter file with the Commission a release from Transco showing receipt of the refunds in conformity with the settlement proposal as approved herein.

(E) Upon withdrawal of the appeal now pending in the Tenth Circuit and upon notification by the Secretary of the Commission that Huffington has otherwise complied with the terms and conditions of the order, the rate and charge of 20.0¢ per Mcf at 15.025 psia, specified in Huffington's offer of settlement, shall be effective as of the date of issuance of this order, and the certificate of public convenience and necessity granted it in Opinion No. 436 shall be deemed effective.

(F) The acceptance by the Commission of Huffington's offer of settlement, is without prejudice to any findings or determinations that may be made in any proceeding now pending, or hereafter instituted by or against Huffington, including area rate or other similar proceedings.

Commissioner Black *dissenting.*

BLACK, *Commissioner, dissenting:*

I dissent. The essence of a bona fide settlement is a *quid pro quo* exchange. That essence is lacking here. Huffington here proposes, and the Commission accepts, the substitution of the Commission's in-line price for the remaining life of the contract in lieu of the contractually authorized rates. Huffington further agrees to drop his appeal of the Commission's Union Texas opinion in return for the Commission's waiving the public's contingent rights to refunds of the difference between the contractually authorized rate collected under the unconditioned temporary certificate and the Commission's in-line price determination. Other parties to the Union Texas opinion will, of course, pursue their appeal; thus, the sole benefit to the public from a settlement with Huffington is the substitution of the in-line price for the remaining life of the contract. Moreover, the record here is void as to the remaining deliverability of the wells which are the subject of these contracts. Thus

we are without the facts essential to evaluate the benefit, if any, which the public will receive from this settlement. Unless it can be demonstrated that there would be at least 5 years of remaining deliverability at the settlement price, I am of the opinion that the benefit which the public would receive is too small to warrant the waiver of Huffington's contingent refund liability.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

ROY M. HUFFINGTON, INC., ET AL., DOCKET NO. RI63-478

ORDER DENYING OFFER OF SETTLEMENT

(Issued November 9, 1965)

On July 19, 1965, Roy M. Huffington, Inc., *et al.* (Huffington) filed an offer of settlement in this proceeding pursuant to Section 1.18(e) of the Commission's Rules of Practice and Procedure involving a proposed increase rate for a sale of natural gas made to United Gas Pipe Line Company (United) from the Hayes Field, Calcasieu Parish, Louisiana, under Huffington's FPC Gas Rate Schedule No. 2. Huffington's initial rate for this sale was 18.8¢ per Mcf of natural gas, at 15.025 psia, and the proposed increased rate is 22.8¢ per Mcf which it has been charging and collecting subject to refund since December 26, 1963, such increased rate having been suspended by order of the Commission and placed in effect by Huffington by proper motion filed in accordance with the applicable provisions of the Natural Gas Act. Huffington proposes a settlement rate of 19.25¢ per Mcf. Additionally, Huffington proposes to charge the settlement rate until such time as the just and reasonable area rate is determined in the South Louisiana Area Rate Proceeding, Docket No. AR61-2, and then to charge such rate, and any contractually provided for rates during the remaining contract period. Also, it would eliminate a price redetermination clause from the subject rate schedule.

Under the settlement proposal, Huffington's annual revenues would be decreased approximately $40,250 from that being charged and collected under the currently effective rates, based upon the delivery volumes set forth in Exhibit B to its proposal, and it would refund approximately $8,850, exclusive of applicable interest, to United.

On August 4, 1965, United filed a timely opposition to the subject offer of settlement. United avers that no special or unusual circumstances surrounded the negotiation of its contract with Huffington. In response to Huffington's claim that it was about to lose its leases at the time of its negotiations with United, United denies this, and as to Huffington's statement that its presently effective rate of 22.8¢ per Mcf was the going rate in the field at that time, United points out that although it was paying such rate to Gulf Oil Corporation (Gulf) in this field, the rate was being paid to Gulf subject to refund. Subsequently, Gulf settled the rate at 17.0¢ per Mcf, *Gulf Oil Corporation, et al.*, Docket No. G-9520, *et al.*, 29 FPC 837.

We stated in our order in this proceeding, issued November 20, 1964, 32 FPC 1344, wherein we denied an offer of settlement by Huffington, that "* * * we have never approved a proposed settlement rate in excess of the initial rate or applicable increased rate ceiling except under special or unusual circumstances surrounding the particular sale." We find none here. The applicable increased rate ceiling is 15.75¢ per Mcf, Huffington's initial rate is 18.8¢ per Mcf, and its proposed settlement rate is 19.25¢ per Mcf. Consequently, we cannot approve the instant proposal.

The Commission finds:

It is necessary and proper in carrying out the provisions of the Natural Gas Act and the Regulations thereunder to deny the offer of settlement filed by Huffington with the Commission on July 19, 1965.

The Commission orders:

The offer of settlement filed by Huffington in this proceeding on July 19, 1965, is denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

SABINE PIPE LINE COMPANY, DOCKET NO. CP64-97

ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued November 9, 1965)

On August 26, 1965, Sabine Pipe Line Company (Applicant), filed in Docket No. CP64-97 a petition to amend the certificate of public convenience and necessity issued on March 25, 1964, 31 FPC 696, authorizing Applicant to construct and operate a pipeline to be used to transport natural gas owned by Texaco Inc. (Texaco) from the Erath Plant of Texaco in Vermilion Parish, Louisiana, to Texaco's Port Arthur plants in Jefferson County, Texas, all as more fully set forth in the petition to amend.

The certificate issued March 25, 1964, authorized Applicant, a wholly-owned subsidiary company of Texaco, to construct and operate approximately 127 miles of 24-inch pipeline to transport natural gas for Texaco. Petitioner proposed to transport approximately 155,000 Mcf of natural gas on an average day and approximately 187,000 Mcf on a maximum day during the first full year of operation.

Applicant proposes the following changes in its construction program:

(1) Acquisition of approximately 43 miles of existing 16-inch pipeline from the east bank of the Calcasieu River in the vicinity of Lake Charles, Louisiana, directly to a point approximately 7 miles from Texaco's Port Arthur plants, which line is presently owned by The Texas Pipe Line Company, another wholly-owned subsidiary company of Texaco;

(2) Looping of the above-described 16-inch line with an 18-inch pipeline;

(3) Substitution of 22-inch pipeline for the presently authorized 24-inch pipeline from Texaco's Henry Gasoline Plant to the east bank of the Calcasieu River and the final 7 miles of proposed pipeline.

As noted above, Sabine was authorized to construct facilities from Texaco's Erath Plant. The difference between this and the presently described Henry Gasoline Plant results from the fact that the Henry Gasoline Plant was to be located within the Erath Unit boundry limits but that it was not constructed at the time of Sabine's original application. Sabine states that except for proximity of the Henry Gasoline Plant is entirely unrelated to the Erath Plant.

The estimated cost of construction of the facilities as they are now proposed is $16,512,923, which will be financed initially with cash available from the issuance of Applicant's capital stock to Texaco and a loan to Applicant by Texaco.

The stated reason for the amendment to the construction proposal is that Applicant could achieve approximately the same maximum line capacity with

a slightly smaller diameter pipeline at a saving in current construction cost. The increase in estimated construction cost from the original estimate of $15,700,000 is due to increased labor cost for pipeline construction in South Louisiana and a decision to bury the river crossings so as to minimize the possibility of line damage. Applicant further states that the decision to acquire the existing pipeline of The Texas Pipe Line Company instead of constructing the 43-mile segment of 24-inch line is a saving in construction and right-of-way costs.

Applicant states that by increasing the pressure at which the gas is to be received at Texaco's Henry Plant from 800 psig to 1100 psig, the mainline capacity will be approximately the same as originally proposed.

Due notice of the filing of the application to amend and opportunity for hearing thereon have been given by publication in the Federal Register on September 9, 1965 (30 F.R. 11570). No protest, petition to intervene or notice of intervention has been filed in the proceeding concerning this amendment.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order issued March 25, 1964, in Docket No. CP64–97 be amended as hereinafter ordered.

The Commission orders:

(A) The Commission's said order issued in Docket No. CP64–97 on March 25, 1964 is amended so as to authorize Applicant to (1) acquire approximately 43 miles of existing 16-inch pipeline of The Texas Pipe Line Company presently extending from the east bank of the Calcasieu River in the vicinity of Lake Charles, Louisiana to a point approximately 7 miles from Texaco's Port Arthur plants, (2) construct and operate an 18-inch pipe-line looping the 43 miles of 16-inch described in (1) above to be acquired from Texas Pipe Line Company, and (3) modify its original facilities by reducing the size of two segments of its main line from 24-inches to 22-inches from the Henry Plant to the east bank of the Calcasieu River (a distance of 79 miles) and the final 7 miles of proposed line.

(B) In all other respects said order shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

NEKOOSA-EDWARDS PAPER COMPANY, PROJECT NO. 2499

ORDER ISSUING LICENSE (MINOR)

(Issued November 10, 1965)

Application was filed on December 9, 1964, by Nekoosa-Edwards Paper Company (Applicant) of Port Edwards, Wisconsin, under Section 4(e) of the Federal Power Act (Act) for a license for constructed Project No. 2499, known as the Unionville Hydroelectric Project, located in the Town of Potsdam on the Raquette River in St. Lawrence County, New York. The project does not affect lands of the United States.

The project was originally constructed in 1907, and the structures and equipment have not been altered since then.

In Docket No. DI–179, *In the matter of Central New York Power Corporation*, the Commission in its Opinion No. 185, issued November 22, 1949, found that the "Raquette River, from its confluence with the St. Lawrence River

to at least Piercefield at about mile 91 is a navigable waterway of the United States." (8 FPC 390). The Unionville project is located on the Raquette River approximately 35 river miles upstream from its confluence with the St. Lawrence River.

The Secretary of the Army and the Chief of Engineers have reported that the plans of the project structures affecting navigation are satisfactory insofar as the interests of navigation are concerned, and recommended for inclusion in any license for the project the terms and conditions in the interests of navigation set forth in attached Form L-9.

The Department of the Interior, in reporting on the application, recommended that the licensee for the project be required to file an "Exhibit R" within a stated period, and that the Department be afforded the opportunity to review the exhibit—all as provided for in Article 12 herein.

The Department of Health, Education, and Welfare has advised that the project has no adverse effects on water supply, water pollution control, or vector control, and none is anticipated.

In our order on rehearing issued February 17, 1965, in *Wisconsin Power & Light Company*, Project No. 2347, *et al.*, 33 FPC 275, we stated that we would have no objection to the issuance of licenses for minor projects without waiving Sections 14 and 15 of the Federal Power Act and the other provisions of the Act necessary to the effectuations of those sections, provided the minor project applications are timely supplemented pursuant to Section 4.50 of our Regulations under the Act (18 CFR § 4.50), which relates to applications for major projects. In the event the Applicant herein wishes a license in which those provisions of the Act are not waived, it should so advise us within 30 days from the date of issuance of this order and file its supplemental application within 30 additional days thereafter.

For the reasons set forth in our April 25, 1962, Opinion No. 357 (27 FPC 830), the license herein granted shall have a termination date of December 31, 1993. Since there was no project construction after 1935, we will make the effective date of the license November 1, 1949, the first day of the month in which we determined the Raquette River to be a navigable water, as set forth above.

Th Commission finds:

(1) Applicant is a corporation organized under the laws of the State of Wisconsin and is authorized to do business in the State of New York, and has submitted satisfactory evidence of compliance with the requirements of all applicable State laws insofar as necessary to effectuate the purposes of a license for the project.

(2) Public notice of the filing of the application has been given. No protests or petitions to intervene have been received. No conflicting application is before the Commission.

(3) The project does not affect a Government dam, nor will the issuance of a license therefor, as hereinafter provided, affect the development of any water resources for public purposes which should be undertaken by the United States.

(4) Subject to the terms and conditions hereinafter imposed, the project will be best adapted to a comprehensive plan for improving or developing a waterway or waterways for the use or benefit of interstate or foreign commerce, for the improvement and utilization of water-power development, and for other beneficial public uses, including recreational purposes.

(5) The installed horsepower capacity of the project hereinafter authorized for the purpose of computing the capacity component of the administrative annual charge is 1,850 horsepower, and the amount of annual charges, based

on such capacity, to be paid under the license for the project, for the costs of administration of Part I of the Act is reasonable as hereinafter fixed and specified.

(6) It will be in the public interest to waive pursuant to Section 10(i) of the Act, the terms and conditions contained in the following sections of Part I of the Act:

Sections 4(b), except the second sentence thereof; 4(e) insofar as it relates to approval of plans by the Chief of Engineers and the Secretary of the Army and to public notice; 6, insofar as it relates to public notice and to the acceptance and expression in the license of terms and conditions of the Act which are hereinafter waived; 10(c), insofar as it relates to depreciation reserves; 10(d); 10(f); 11; 12; 14, except insofar as the power of condemnation is reserved; 15; 19; 20; 22; and 23(a), insofar as it relates to the determination of fair value.

The Commission orders:

(A) This license is hereby issued to Nekoosa-Edwards Paper Company of Port Edwards, Wisconsin, under Sections 4(e) and 10(i) of the Act, for a period effective as of November 1, 1949, and terminating December 31, 1993, for the continued operation and maintenance of Project No. 2499, located on the Raquette River, a navigable water of the United States, subject to the terms and conditions of the Act insofar as not expressly waived herein, which Act is hereby incorporated herein by reference as a part of this license, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) Project No. 2499 consists of:

(i) All lands constituting the project area and enclosed by the project boundary or the limits of which are otherwise defined.

(ii) A 299 foot long, 18 foot high reinforced concrete buttress dam with flashboards, which add 2 feet to the height when in use; a masonry flume 18 feet by 80 feet; a brick and reinforced concrete powerhouse with total installed capacity of 1,850 horsepower operating under an estimated head of 20.5 feet; and all other structures, fixtures, equipment or facilities used or useful in the operation and maintenance of the project and located on the project area, and all rights and interests therein, the possession of which is necessary in the maintenance and operation of the project.

(C) This license is also subject to the terms and conditions set forth in Form L-9 (July 1, 1964) entitled, "Terms and Conditions of License for Constructed Minor Project Affecting Navigable Waters of the United States" (32 FPC 577), which terms and conditions, designated as Articles 1 through 11, are attached hereto, and made a part hereof, and subject to the following special conditions set forth herein as additional articles:

Article 12. The licensee shall, within one year from the date of this license, file with the Commission for approval its proposed recreational use plan for the project. The plan shall be prepared after consultation with appropriate Federal, State and local agencies, and shall include recreational improvements which may be provided by others in addition to the improvements the Licensee plans to provide.

Article 13. The Licensee shall pay to the United States the following annual charge:

For the purpose of reimbursing the United States for the costs of administration of Part I of the Act for the period November 1, 1949, through March 31, 1962, a charge of $5.00 per annum, and effective as of April 1, 1962, an annual charge of $92.50.

(D) The terms and conditions of the Act, which it has been found above to be in the public interest to waive, are hereby excluded from this license.

(E) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license. In acknowledgment of the acceptance of this license, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

TRUNKLINE GAS COMPANY v. THE SUPERIOR OIL COMPANY, DOCKET NO. R164-273; THE SUPERIOR OIL COMPANY, DOCKET NOS. G-18168, G-20435 AND G-20577

ORDER ON REMAND REQUIRING PAYMENT OF INTEREST AND MODIFYING ORDERS

(Issued November 10, 1965)*

This case has been remanded to us by the United States Court of Appeals for the Fifth Circuit, pursuant to our request, to permit us to consider whether Trunkline Gas Company (Trunkline), particularly in the light of the filed rate doctrine, should be required to pay interest on the entire amount of a sum we have heretofore required Trunkline to pay The Superior Oil Company (Superior). We have previously held that Trunkline need pay interest on only a portion of such amount.[1] We now conclude that Trunkline should be required to pay interest on the entire amount.

The issue in this case arises from Trunkline's tendering payments for interstate purchases of gas from Superior at rates different from those filed with, and accepted by the Commission. Thus, from September 1963 through January 1964, Trunkline tendered payment of $1,876,630.08, reflecting rates of 14.0¢ per Mcf and 15.5¢ per Mcf under two gas purchases from Superior. However, the total amount payable under the rates of 20.0¢ and 24.05¢ per Mcf on file with the Commission applicable to these two sales[2] was $2,858,-242.90, which is $981,612.82 more than the $1,876,630.08 tendered by Trunkline. Upon the Commission's finding in its order of March 9, 1964, 31 FPC 506, that the proper amounts due Superior must be computed under the filed rates, Trunkline paid Superior the correct principal amount of $2,858,242.90 on March 30, 1964. In addition, Trunkline made an interest payment of $17,-330.80, computed on the $981,612.82 difference between the amounts originally tendered and those actually due. The Commission approved this computation of interest in its orders of April 15 and June 9, 1964. Superior appealed this decision to the Fifth Circuit claiming that the Commission erred in not requiring interest on the $2,858,242.90 representing the full amounts payable by Trunkline. Subsequent to the court's remand order, additional briefs were filed by the parties and by Staff arguing primarily whether the filed rate doctrine supports Superior's position. Subsequently, supplemental briefs were filed relating to the applicability of the recently decided *Phillips* case, No. 7845, filed July 22, 1965, 349 F. 2d 535 (CA10-1965).

---

* See orders issued January 3, 1966 and March 4, 1966 re rehearing, etc., 35 FPC 14, 335.

[1] By orders issued herein on April 15, 1964, and June 9, 1964, 31 FPC 934, 1511.

[2] Superior's FPC Gas Rate Schedules Nos. 1 and 3, respectively.

Upon reconsideration of this issue, we conclude that the filed rate doctrine supports the position advanced by Superior and by Staff, and that the *Phillips* case, *supra*, is inapposite.

To summarize, under the language of Section 4(d) of the Natural Gas Act, and numerous judicial interpretations,[3] Trunkline's tenders of lesser amounts than those due under the filed rates were neither lawful nor effective. Superior could not have lawfully accepted such tenders. Under these circumstances, the tender of less than the filed rate does not excuse the payment of interest on any part of the amount due.[4]

Trunkline's principal argument seems to be that this Commission has final authority over the rates applicable to the instant sales, and that it has a right to seek relief with respect thereto. Based on these two premises, Trunkline concludes that Superior should have accepted the original tenders. We agree with Trunkline's assertions that this Commission has jurisdiction over the subject matter of the dispute and that Trunkline has a right to seek relief from this Commission. However, the right to seek relief does not, as Trunkline concludes, carry with it the power to act prior to the Commission's determination as though the relief sought had been granted.

In addition, Trunkline relies on the *Associated* case[5] as authority for Superior's being free to accept the original tenders without prejudging any of its rights. In effect, the *Associated* case held that a seller may place a higher rate in effect but continue to collect a lesser rate pending the determination of the justness and reasonableness of the higher rate. We do not believe that this decision supports Trunkline's position for two reasons. First, the court held only that the seller has an option, where the buyer does not object, to charge a lower rate while having a higher rate in effect. Here, Superior exercised its option to collect the higher rate. Secondly, the Commission amended its rules and regulations by Order No. 230, issued December 5, 1960, 24 FPC 1058, so as, in effect, to eliminate the choice afforded by *Associated*.

Finally, Trunkline relies on certain court decisions involving situations where partial payment had been made where the court required interest only on the additional amounts due and owing. These cases are distinguishable and not controlling here because they did not present the decisive question whether the partial payments were lawfully proferred and accepted.

The *Phillips* decision, *supra*, has no applicability to the instant situation. The filed rate doctrine was not involved in *Phillips*, since Phillips did charge and collect, subject to refund, the rates on file with this Commission during the locked-in periods involved in those proceedings. Phillips' subsequent tender of what both it and the purchaser agreed was the sum subject to refund when the filed rates were found to lack contractual support does not involve any violation of that doctrine.

The Commission orders:

(A) Trunkline shall, within 60 days of the date of issuance of this order, pay Superior the amount of $33,212.67, constituting unpaid interest on the principal amounts paid by Trunkline on March 30, 1964, plus additional

interest on such interest at 7 percent per annum accruing from March 30, 1964, until the date the payment is made. Trunkline shall, simultaneously with the making of such payment, transmit to the Commission a statement showing the amount so paid and the computations underlying such payment.

(B) Within 75 days of the date of issue of this order, Superior shall transmit to Trunkline and to the Commission its written acceptance of the payments ordered in paragraph (A) above, or in the event Trunkline's payments are not made or are not deemed satisfactory, a statement setting forth the pertinent facts in this regard.

(C) The Commission's orders issued in this proceeding on April 15, 1964 and June 9, 1964, are modified to require Trunkline to pay interest to Superior as hereinabove set forth.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

ORDER MODIFYING OPINION NO. 468-A

(Issued November 12, 1965)

On October 22, 1965, a number of respondents to this proceeding applied for rehearing, or, in the alternative, for reconsideration of Opinion No. 468-A issued October 4, 1965, 34 FPC 1068, insofar as that opinion stated that the New Mexico Oil and Gas Ad Valorem Production Tax should not be included in computing the applicable New Mexico production taxes which may be added to the base price to be collected by New Mexico producers of natural gas.

Examination of the cost computation from which was derived the basic price, not including production taxes, revealed that certain payments of the New Mexico Oil and Gas Ad Valorem Production Tax were included in the computation. Obviously a tax included as part of the basic cost computation should not be recouped by the producers a second time by being added on to the base price in which the cost has already been included. Upon further review of the record and the October 22 motion by the respondents it appears that certain producers had so classified the payment of the subject tax that it was not included in our costing computation.

It appears that, while a number of companies included the New Mexico tax payments as part of the cost computation that determined the base price, a far greater number treated the New Mexico tax as a production tax so that their payments thereunder never found their way into the computation of the cost upon which the base price was established. Examination of the volumes of gas-well gas sold by the various producers in New Mexico establishes that the volume produced by companies which did not treat the New Mexico tax as a production tax were relatively small whereas the overwhelming majority of New Mexico gas-well gas upon which this tax levied was produced by companies which treated this tax as a production tax. In these circumstances, we think that equity requires that the New Mexico Oil and Gas Ad Valorem Production tax be considered one of the production taxes which may be added to the base price for gas produced in New Mexico. Opinion No. 468-A should be modified accordingly.

The Commission orders:

Opinion No. 468–A is hereby modified to the extent that in the computation of the applicable state and local production taxes for New Mexico there may be included the New Mexico Oil and Gas Ad Valorem Production Tax.

Commissioner Bagge *not participating.*

AREA RATE PROCEEDING (PERMIAN BASIN), DOCKET NO. AR61–1, ET AL.

ORDER AMENDING ORDER TO SHOW CAUSE

(Issued November 12, 1965)*

On August 5, 1965, 34 FPC 424, the Commission issued in the above-designated proceeding an order requiring certain respondents to show cause why the determinations set forth in Opinion No. 468[1] should not apply to sales of gas and to certificate applications in the Permian Basin which were not consolidated in the Permian case. As a result of further review of the Commission's records it appears that the August 5 order failed to cover all of the sales of gas and certificate applications in the Permian Basin which were not consolidated. Accordingly, it appears to be necessary and proper to amend the August 5 show cause order as set forth below.

The Commission orders:

(A) Appendix "A" to the August 5 order to show cause is hereby amended by adding "Yates Petroleum Company".

(B) Appendix "B" to the August 5 order to show cause is hereby amended by adding "Bartessa Oil Corporation. Docket No. CI61–1725", "Chase Petroleum Company, *et al.*, Docket No. CI64–820", "Roy E. Kimsey, Jr. (Operator), *et al.*, Docket No. CI65–782", and "Maxwell Oil Company, Docket Nos. G–18231 and G–18232".

(C) Appendix "C" to the August 5 order to show cause is hereby amended by adding the following:

Producer	*Docket No.*
George T. Abell	RI66–30.
Hanley Co., *et al*	RI65–633, RI66–7.
Hanley Co. (Operator), *et al*	RI65–614.
C. E. Long, *et al*	RI66–31.
Marathon Oil Co	RI66–9.
Marathon Oil Co. (Operator), *et al*	RI66–8.
The Pure Oil Co.[2]	RI66–16.
Skelly Oil Co. (Operator), *et al*	RI66–29.
Socony Mobil Oil Co., Inc	RI66–21.
Socony Mobil Oil Co., Inc. (Operator)	RI66–22.
Sohio Petroleum Co	RI66–26.
Sohio Petroleum Co. (Operator), *et al*	RI66–25.
Sun Oil Co	RI65–582, RI66–18.
Texaco Inc	RI66–1.
Warren Petroleum Corp	RI66–17.

*See order issued December 3, 1965, 34 FPC 1411.

[1] By order issued October 12, 1965, 34 FPC 1135, in the above-designated proceeding all references to Opinion No. 468 were to read as meaning Opinion No. 468 as modified and clarified by Opinion No. 468–A, 34 FPC 159, 1068, and accompanying order.

[2] Union Oil Co. of California has succeeded to the interest of The Pure Oil Co.

(D) Appendix "D" to the August 5 order to show cause is hereby amended by adding the following:

Producer	*Docket No.*
W. K. Byrom	CI64-732.
Cabot Corp. (SW), *et al*	G-18619, CI60-110.
Gulf Oil Corp. (Operator), *et al*	CI65-983.
Humble Oil & Refining Co	CI61-1581.
Oddesa Natural Gasoline Co	CI62-990.
Joseph I. O'Neill, Jr., *et al*	G-19113.
Pan American Petroleum Corp	CI60-476.
Shell Oil Co	CI61-1491.
Sinclair Oil & Gas Co	CI61-498, CI64-438.
Standard Oil Co. of Texas, a division of Chevron Oil Co	G-18023, G-18024, G-18025.
Socony Mobil Oil Co, Inc	G-18725, G-18728, G-18729.
Sun Oil Co	CI61-372.
Tidewater Oil Co	CI61-1016, CI64-794.
Union Texas Petroleum Co., a division of Allied Chemical Corp., *et al*	CI64-689.
Phillips Petroleum Co	CI61-1529.
Joseph E. Seagram, d/b/a Texas Pacific Oil Co	CI66-103.

(E) Those parties added to the subject proceeding as respondents above shall comply with the applicable provisions of ordering paragraphs (A), (B) and (C) of the order of August 5, as modified by the order of October 12, requiring the respondents to show cause by December 6, 1965 why the determinations set forth in Opinion Nos. 468 and 468-A should not apply to those sales of gas and to certificate applications in the Permian Basin which were not consolidated in the subject proceeding.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

AREA RATE PROCEEDING, ET AL. (PERMIAN BASIN AREA), DOCKET NO. AR61-1, ET AL.

ORDER GRANTING PARTIAL STAY[1]

(Issued November 12, 1965)[2]

The United States Court of Appeals for the Tenth Circuit on October 20, 1965, in *Skelly Oil Co.* v. *F.P.C.* (CA10 No. 8385, *et al.*) stayed through January 20, 1966, the effectiveness of Opinion Nos. 468 and 468-A, 34 FPC 159, 1068, as to Skelly Oil Company, Phillips Petroleum Company and Warren Petroleum Corporation. The Court's order further provided that any member of the Court may grant a similar stay if other petitions for review are filed in or transferred to that Court. Argument was set for January 7, 1966, on the question of further stay.

In light of the Court's stay order, we think it only fair to stay the effectiveness of Opinion Nos. 468 and 468-A as to all producers covered by these opinions, except as noted below. To do otherwise might lead to unnecessary confusion and inequities among the various producers involved here. We shall

[1] This order is not applicable to Skelly, Phillips and Warren, or to any other producer which has filed a petition for court review.

[2] See order extending stay issued February 11, 1966, 35 FPC 211.

therefore stay, *inter alia*, the effectiveness of the rate reductions required under paragraphs (A) and (B) of Opinion No. 468, as amended, and the moratorium on rate increase filings provided in paragraphs (H) and (K) of that opinion. We can find no justification, however, for delaying the filings required by ordering paragraphs (E), (F) and (I) of Opinion No. 468, as amended, although the operative effect of the filings will be stayed.[3] The rate reduction filings under paragraph (E), the statement and filings with respect to quality standards under paragraph (F), and the refund reports required under paragraph (I) are necessary to ascertain the exact scope of the producers' contingent obligations to make refunds if Opinion Nos. 468 and 468–A are ultimately upheld.

Any filings made because of the stay of paragraphs (H) or (K) relating to the moratorium on rate increases will be accepted for filing contingent upon the outcome of the further proceedings on a permanent stay which the Tenth Circuit has scheduled, and these increases, meanwhile can be suspended for five months under Section 4(e) of the Act. Such filings will be rejected, *ab initio*, if the Commission's moratorium is ultimately upheld upon judicial review.

In view of the Court's October 20 order, we are also extending the time for compliance with the filing requirements of paragraph (E) to November 30, 1965, and paragraph (F) and (I) to December 30, 1965.

The Commission orders:

For the reasons set forth above, provisions of Opinion Nos. 468 and 468–A, ordering respondents to take or refrain from taking specified forms of action are stayed until January 20, 1966, except that the filings required by Ordering Clauses (E), (F) and (I) shall be made, the filing date under Paragraph (E) being extended to November 30, 1965 and under paragraphs (F) and (I) to December 30, 1965.

During the pendancy of this stay, or any extension thereof, filings made pursuant to ordering paragraphs (E) will be accepted for informational purposes only and will be kept separate from the filed rate schedules of said producer.

Commissioner Bagge *not participating.*

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

BLANDIN PAPER COMPANY, PROJECT NO. 2362

ORDER ISSUING LICENSE (MAJOR) AND DENYING REQUEST FOR DISCLAIMER OF JURISDICTION

(Issued November 12, 1965)

Application was filed on April 25, 1963, by Blandin Paper Company (Applicant) of Grand Rapids, Minnesota, for a license under Section 4(e) of the Federal Power Act (Act) for constructed major Project No. 2362, known as the Blandin Paper Company Project (originally known as the Grand Rapids Project) located on the Mississippi River, in Itasca County, Minnesota, at the Town of Grand Rapids.

[3] There is also no need to stay the minimum rate provisions in paragraph (G) of Opinion No. 468.

The Grand Rapids project was originally constructed in 1901–02, under an Act of Congress dated February 27, 1899 (30 Stat. 904),[1] as amended by the Act of February 27, 1900 (31 Stat. 33),[2] with a powerhouse containing mechanical grinders. A 600-kw hydroelectric unit was installed in 1916. In 1948 the original timber-crib dam collapsed and the power plant was partly destroyed. The dam was completely reconstructed in 1949. The spillway was rebuilt and a new 1500-kw hydroelectric unit was added. The total cost of reconstruction was reported to be about $1,250,000. The location and plans for the 1949 construction were approved by the Department of the Army on July 7, 1949.

We will first deal with the Applicant's challenge of our jurisdiction to license this project. Applicant contends that the aforementioned Act of Congress authorizing the construction of the original Grand Rapids project exempts the present project from the Commission's licensing jurisdiction under the terms of Section 23(a) of the Federal Power Act.[3] We cannot agree. We are of the opinion that the rebuilding of the project in 1949 was beyond the

---

[1] The Act of 1899 provides:

BE IT ENACTED by the Senate and House of Representatives of the United States of America in Congress assembled, That the consent of Congress is hereby granted to the Grand Rapids Water Power and Boom Company, of Grand Rapids, Minnesota, its successors and assigns, to construct across the Mississippi River, at a point within the limits of the village of Grand Rapids, Minnesota, to be approved by the Secretary of War, a dam, canal, and works necessarily incident thereto, for waterpower purposes, and a wagon and foot bridge if desired in connection therewith for the purpose of travel. Said dam shall be so constructed that there can at any time be constructed in connection therewith a suitable lock for navigation purposes: Provided, That the Government of the United States may at any time take possession of said dam without compensation and control the same for purposes of navigation but shall not do so to the destruction of the water power created by said dam to any greater extent than may be necessary to provide proper facilities for navigation:

Provided also, That said dam shall be so constructed that it will not at any time raise the water surface, at a point three hundred feet above said dam, to an elevation higher than the floor of the sluices of the reservoir dam built by the Government at Pokegama Falls on the Mississippi River, in section thirteen, township fifty-five, range twenty-six west of the fourth principal meridian, Minnesota: Provided further, That said dam shall be so constructed as to provide for the free passage of saw logs without tolls or charges; and the said company shall construct and maintain, at its own expense, suitable fishways, to be approved by the United States Fish Commissioner; and the said company, its successors and assigns, shall make such change and modification in said dam, canal, and works incident thereto, and said bridge, as the Secretary of War may from time to time deem necessary in the interests of navigation, at its own cost and expense: Provided further, That in case any litigation arises from the obstruction of the channel by said dam, canal, and works incident thereto, or such bridge, the case may be tried in the proper court of the United States in the district in which said works are situated.

Sec. 2. That the right to amend, alter, or repeal this Act is hereby expressly reserved.

Sec. 3. That this Act shall be null and void unless said dam herein authorized be commenced within one year and completed within three years from the date hereof.

[2] The 1900 Act provides:

BE IT ENACTED by the Senate and House of Representatives of the United States of America in Congress assembled, That section three of an Act entitled "An Act to authorize the Grand Rapids Water Power and Boom Company, of Grand Rapids, Minnesota, to construct a dam and bridge across the Mississippi River," approved February twenty-seventh, eighteen hundred and ninety-nine, is hereby amended so as to read as follows: "Sec. 3. That this Act shall be null and void unless said dam herein authorized be commenced within two years and completed within four years from the date hereof." Approved February 27, 1900.

[3] Section 23(a) provides that:

The provisions * * * of this Part shall not be construed as affecting any permit or valid existing right-of-way heretofore granted * * * or as affecting any authority heretofore given pursuant to law * * *.

scope of the 1899 Congressional Permit, and that such rebuilding without Commission license was therefore unlawful under Section 23(b) of the Federal Power Act.[4]

Although the 1899 Act, as amended in 1900, clearly granted a permit to construct the original Grand Rapids project, that Act should not be construed to provide a basis for the Applicant's claim of right to maintain and operate the present reconstructed project at this site. The terms of this congressional authorization, unless amended, was limited to the life of the original project works, and does not continue in perpetuity to authorize the construction of new projects at this site. This is consistent with the decision of the Court of Appeals for the Eighth Circuit in *Northwest Paper Co.* v. *F.P.C.*, 344 F. 2d 47 (CA8–1965) and *Minnesota Power & Light Co.* v. *F.P.C.*, 344 F. 2d 53 (CA8–1965). These two cases involved facts similar to those before us in this proceeding, including almost identical pre-1920 congressional authorization of water power facilities and substantial reconstruction of the projects after 1920, the year the Federal Water Power Act was passed. In both cases, the Court of Appeals considered the effect of the pre-1920 permits, holding that those permits did not authorize the maintenance and operation of projects having substantial reconstruction. The court reasoned that this holding was consistent with the accepted canon of interpretation that questions concerning such grants of private rights are resolved in favor of the Government. Moreover, the court concluded that such a construction of the original congressional authorizations squared with the intent of Congress, as expressed in the Federal Power Act, to centralize the authority over water power resources in this Commission.

We believe the *Northwest Paper* and *Minnesota Power* cases are dispositive of the jurisdictional issue in the present proceeding. The project as reconstructed in 1949 is not the project that was authorized by the 1899 Act. As described above, the dam and spillway were completely rebuilt after the collapse of the original structure and a new 1500 kw generating unit was installed. Moreover, the poor level was raised above the elevation specified by the 1899 Act. That Act provided in part:

> That said dam shall be so constructed that it will not at any time raise the water surface * * * to an elevation higher than the floor of the sluices of the reservoir dam built by the government at Pokegama Falls on the Mississippi River * * *

The dam at Pokegama Falls is located some three miles upstream from Applicant's dam. Available records indicate that the floor of the sluices at the Goverynment dam is at elevation 1264.89 mean sea level (1912 adjustment). Applicant's present reservoir pool is at elevation 1268.2 (1929 adjustment). By reconciling the difference of about 0.465 feet between the two datum planes, we find that the present normal pool elevation is about 3.8 feet higher than originally authorized. It should be apparent from the foregoing facts that Applicant's present project is not authorized by either the letter or the intent of the Act of 1899, and therefore, that the 1949 construction undertaken without a license from this Commission was unlawful under Section 23(b) of the Federal Power Act.

---

[4] Section 23(b) provides in pertinent part that:

It shall be unlawful * * * for the purposes of developing electric power * * * to construct, operate, or maintain any dam * * * or other works across, along or in any of the navigable waters * * * except under and in accordance with the terms of a permit or valid existing right-of-way granted prior to June 10, 1920, or a license granted pursuant to this Act. * * *

Having decided that a license is necessary for the present project, we now proceed to consideration of the license application itself.

The Department of the Interior, in reporting on the application, recommended for inclusion in any license for the project certain conditions in the interests of fish, wildlife, and recreation. We consider that Interior's objectives are met by the provisions of attached Form L–3, revised August 1, 1964.

The Department of Health, Education, and Welfare (H.E.W.) has advised that the Minnesota State Department of Health has reviewed the history of fish kills and nuisance conditions in the Mississippi River at Grand Rapids and recommends that Applicant not be permitted to interrupt the flow below its dam except as permitted or required by the U.S. Corps of Engineers. The Department further advised that it is not anticipating that the granting of a license for the project will intensify vector problems. The Applicant's reservoir, which is about 3 miles long, 30 feet deep (maximum) and having an average width of about 1,000 feet, is too small to interrupt the flow of the river for any significant period. It thus does not appear necessary at this time to prescribe water releases for fish protection. The objectives of the Minnesota State Department of Health that the license as issued be adequate to assure that appropriate actions on this area can be taken if the necessity therefor should eventuate are met by the provisions of Article 6 in the attached Form L–3. There, the Commission reserves the right to prescribe water releases in the interest of the fullest practicable conservation and utilization of the project for power purposes and for other beneficial public uses, including recreational purposes. This includes such releases for fish protection or water pollution control as the Commission may find to be appropriate, after notice and opportunity for hearing. This we consider more appropriate than assigning this matter to the unreviewable discretion of any federal agency.

The Secretary of the Army and the Corps of Engineers have reported that the 1949 construction was substantially in accordance with the approved plans and that the plans of the project structures affecting navigation are satisfactory.

In our opinion, the term of this license should run through December 31, 1993 and its effective date should be September 1, 1948, the first day of the month during which reconstruction of the destroyed powerhouse facilities and the dam were commenced.

The Commission finds:

(1) The project affects navigable waters of the United States.

(2) Applicant is a corporation organized under the laws of the State of Minnesota, and has submitted satisfactory evidence of compliance with the requirements of all applicable State laws insofar as necessary to effectuate the purposes of a license for the project.

(3) Public notice of the filing of the application has been given. No protests or petitions to intervene have been received. No conflicting application is before the Commission.

(4) The project affects a Government dam, but the issuance of a license therefor, as hereinafter provided, will not affect the development of any water resources for public purposes which should be undertaken by the United States.

(5) Subject to the terms and conditions hereinafter imposed, the project will be best adapted to a comprehensive plan for improving or developing a waterway or waterways for the use or benefit of interstate or foreign

commerce, for the improvement and utilization of water-power development, and for other beneficial public uses, including recreational purposes.

(6) The installed horsepower capacity of the project hereinafter authorized for the purpose of computing the capacity component of the administrative annual charge is 2,800 horsepower, and the amount of the annual charge, based on such capacity, to be paid under the license for the project, for the cost of administration of Part I of the Act is reasonable.

(7) The 2.4 kv transmission line extending about 500 feet from the project to the point of connection at Applicant's paper mill steam power plant and which was included in the application for license is a primary line subject to license as a part of the project.

(8) The exhibits designated and described in paragraph (B) below conform to the Commission's rules and regulations and should be approved as part of this license.

The Commission orders:

(A) This license is hereby issued to Blandin Paper Company (Licensee) under Section 4(e) of the Federal Power Act (Act) for a period effective as of September 1, 1948, the first day of the month during which reconstruction was commenced on both the powerhouse and dam facilities, and terminating on December 31, 1993, for the continued operation and maintenance of Project No. 2362, located on the Mississippi River, a navigable water of the United States, in Itasca County, Minnesota, subject to the terms and conditions of the Act, which is incorporated herein by reference as a part of this license, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) Project No. 2362 consists of:

(i) all lands constituting the project area and enclosed by the project boundary or the limits of which are otherwise defined, and/or interest in such lands necessary or appropriate for the purposes of the project, whether such lands or interest therein are owned or held by the Licensee or by the United States; such project area and project boundary being more specifically shown and described by the following exhibit which formed a part of the application for license and which is designated as follows:

Exhibit K (FPC No. 2362–1) "Map of Blandin Paper Company Reservoir."

(ii) a rock-filled crib and concrete gravity dam 30 feet high and 94 feet long including 6 stop-log openings and one tainter gate bay; a reservoir about 3 miles long having a normal pool elevation of 1268.2 feet above mean sea level—1929 adjustment; a concrete and masonry powerhouse and intake structure 59 feet long and about 60 feet high containing two hydroelectric units, one of 600 kw and one of 1500 kw capacity; a 2.4 kv transmission line extending 500 feet to the Licensee's paper mill steam powerplant; and appurtenant electrical and mechanical facilities; such project area and project boundary being more specifically shown and described by the exhibit hereinbefore cited and by certain other exhibits which also formed a part of the application and which are designated and described as follows:

Exhibit L: (FPC No. 2362–2) "Plan, Elevation, and Sections."

Exhibit M: Four typewritten pages, "General Description of Equipment, Project Works and Specifications", filed in the Commission on April 25, 1963.

Note: The paper mill screening and pumping system located in the project powerhouse, and the pipes and wires leading thereto and extending therefrom, are not parts of the project.

(iii) all of the structures, fixtures, equipment or facilities used or useful in the maintenance and operation of the project and located on the project area, including such portable property as may be used or useful in connection with the project or any part thereof, whether located on or off the project area, if and to the extent that the inclusion of such property as part of the project is approved or acquiesced in by the Commission; also, all riparian or other rights, the use or possession of which is necessary or appropriate in the maintenance or operation of the project.

(C) This license is also subject to the terms and conditions set forth in Form L–3 (Revised August 1, 1964) entitled "Terms and Conditions of License for Constructed Project Affecting Navigable Waters of the United States" (32 FPC 1114), which terms and conditions, designated as Articles 1 through 29, are attached hereto and made a part hereof, and subject to the following special conditions set forth herein as additional articles:

Article 30. The Licensee shall pay to the United States the following annual charge, effective September 1, 1948:

For the purpose of reimbursing the United States for the costs of administration of Part I of the Act, a reasonable annual charge as determined by the Commission in accordance with the provisions of its regulations, in effect from time to time. The authorized installed capacity for such purpose is 2,800 horsepower.

Article 31. On the application of any person, association, corporation, Federal agency, State or municipality, the Licensee shall, after notice and opportunity for hearing, permit such reasonable use of its reservoirs or other project works or parts thereof as may be ordered by the Commission in the interest of comprehensive development of the waterway or waterways involved and the conservation and utilization of water resources of the region for water supply for steam-electric, irrigation, industrial, municipal or similar purposes consistent with the primary objective of the project. The Licensee shall receive such reasonable compensation as may be appropriate for use of its reservoirs or other project works or parts thereof for such purposes, any such compensation to be fixed either by Commission approval of an agreement between Licensee and the party or parties benefiting or by the Commission in the event the parties are unable to agree. Applications shall contain information in sufficient detail to afford a full understanding of the proposed use, including satisfactory evidence that the applicant possesses necessary water rights pursuant to applicable State law, or a showing of cause why such evidence cannot be submitted, and a statement as to the relationship of the proposed use to any State or municipal plans or orders which may have been adopted with respect to the use of such waters.

(D) The exhibits designated and described in paragraph (B) above are hereby approved as part of this license.

(E) Applicant's aforementioned request that we disclaim Commission jurisdiction over the Grand Rapids Project No. 2362 is hereby denied.

(F) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license. In acknowledgment of the acceptance of this license, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

GRANITE STATE GAS TRANSMISSION, INC., DOCKET NO. CP66-37; TENNESSEE GAS TRANSMISSION COMPANY, DOCKET NO. CP66-40

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued November 15, 1965)

On July 30, 1965, Granite State Gas Transmission, Inc. (Granite) filed in Docket No. CP66-37 an application pursuant to Section 7(c) of the Natural Gas Act authorizing (1) the construction and operation of certain natural gas facilities, and (2) the transportation of natural gas in interstate commerce to the State of Maine for Portland Gas Light Company (Portland Gas), as more fully set forth in the application.

Granite's present facilities, which were exempted from the provisions of the Natural Gas Act in Docket No. G-10423 (16 FPC 969), consist of 41.6 miles of 4, 6 and 8-inch transmission lines in New Hampshire, and a small propane-air peak shaving facility. Natural gas service presently rendered by Granite comprises service to one resale customer, Allied New Hampshire Gas Company, and three direct sales, all exclusively within New Hampshire. Granite's natural gas supply is received from its sole supplier, Tennessee Gas Transmission Company (Tennessee) at the Massachusetts-New Hampshire boundary near Haverhill, Massachusetts.

Construction and operation of Granite's proposed facilities will bring Granite under the provisions of the Natural Gas Act. Granite proposes (1) to construct an additional 5.33 miles of 8⅝ inch pipeline from a point on its existing facilities near Dover, New Hampshire, to the New Hampshire-Maine boundary; (2) to install and operate a 360 horsepower compressor unit on its existing pipeline; and, (3) to construct metering facilities at the delivery point to Portland Gas. Granite's proposed facilities will connect with a pipeline which Portland Gas proposes to construct from the Maine-New Hampshire boundary to the Portland, Maine, area, a distance of approximately 45 miles.

Portland Gas proposes to contract directly with Tennessee for the entire firm natural gas requirements of its distribution system. Tennessee will deliver Portland Gas' natural gas at its existing connection with Granite, and Granite will transport the gas for the account of Portland Gas to the New Hampshire-Maine boundary, where Portland Gas will take delivery. The estimated natural gas requirements for the Portland market area are as follows:

	First year	Second year	Third year
Annual (Mcf)	1,012,378	1,231,284	1,439,186
Peak day (Mcf)	5,566	6,998	7,009

Portland Gas has received preliminary approvals from the Maine Public Utilities Commission and the New Hampshire Public Utilities Commission for the acquisition of the capital stock of Granite. Thereafter, Granite will operate as a wholly-owned subsidiary of Portland Gas.

Granite's estimated cost of constructing the proposed facilities is $370,230, which amount will be advanced to Granite by Portland Gas at an interest rate of 5.5% per annum. Portland Gas will obtain a combination of additional common stock, debentures, and first mortgage bonds.

On August 4, 1965, Tennessee filed in Docket No. CP66-40 an application pursuant to 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the sale for resale in interstate commerce of natural gas to Portland Gas, as more fully set forth above and in the application. Tennessee's proposed sales of natural gas to Portland Gas will not require the construction of additional facilities, for the Commission's order in Docket No. CP66-54 (dated August 25, 1965) granted temporary authorization to Tennessee to construct and operate facilities adequate to meet Portland Gas' natural gas requirements.

After notice of Granite's application and Tennessee's application was published in the Federal Register, a petition for leave to intervene was filed on September 7, 1965, by Biddeford and Saco Gas Company. On October 28, 1965, however, Biddeford and Saco Gas Company withdrew this petition. On August 19, 1965, Allied New Hampshire Gas Company filed a petition for leave to intervene, and on September 7, 1965, the Public Utilities Commission of the State of Maine filed a notice of intervention, both of which were in support of Granite's application. No protest to the granting of Granite's application has been filed.

Granite is presently the sole supplier of natural gas in New Hampshire, and Portland Gas, its prospective parent, is the sole supplier in Maine. No interstate pipeline with access to gas production or with its own production has lines running into either state. In order to assure that companies and communities in these two states, which may in the future desire natural gas service and be authorized to distribute it, will not be precluded from obtaining such service as a result of the control of the sole New Hampshire supplier/transporter by the sole Maine distributor, we are conditioning the certificate issued to Granite to insure that the facilities of both companies will be available for transportation of gas to other authorized distribution entities to the extent that this can be accomplished without unduly burdening Granite or its parent or impair their ability to render adequate service to their customers.

At a hearing held on November 10, 1965, the Commission on its own motion received and made all evidence submitted in support of the applications, including the applications and exhibits, a part of the record in this proceeding. Upon consideration of this record,

The Commission finds:

(1) Granite State Gas Transmission, Inc., a New Hampshire corporation having its principal place of business in Portsmouth, New Hampshire, is a "natural-gas company" within the meaning of the Natural Gas Act.

(2) Tennessee Gas Transmission Company, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act.

(3) The facilities proposed to be constructed by Granite will be used in the transportation of natural gas in interstate commerce, and are subject

to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(4) The proposed sale and delivery of natural gas by Tennessee is subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(5) Granite and Tennessee are able and willing properly to do the acts and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(6) Granite's proposed transportation of natural gas in interstate commerce and Tennessee's proposed sale of natural gas for resale in interstate commerce are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(7) Public convenience and necessity require that the certificate hereinafter issued and the rights created thereunder be conditioned upon Granite's and Tennessee's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of said Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to Granite State Gas Transmission, Inc., authorizing the construction and operation of facilities as hereinbefore described and as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) A certificate of public convenience and necessity is issued to Tennessee Gas Transmission Company authorizing the sale and delivery of natural gas as hereinbefore described and as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(C) The certificates issued by this order and the rights granted thereunder are conditioned upon Granite's and Tennessee's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e), of Section 157.20 of said Regulations.

(D) These certificates are granted upon the express condition that Granite State Gas Transmission, Inc., and its parent-company, Portland Gas Light Company, agree, as evidenced in writing by responsible officers of said companies within thirty (30) days from issuance of this order, that upon order of the Commission after notice and opportunity for hearing finding that such action is necessary and desirable in the public interest, they will make available to any person or municipality who may be authorized pursuant to the laws of New Hampshire or Maine to distribute natural gas in any community thereof, the use of their transportation facilities for the transportation or sale of natural gas received from any natural gas company which may hereafter interconnect with facilities of Granite State Gas Transmission, Inc., or its parent-company; provided that such transportation or sale, of natural gas can be undertaken by Granite State Gas Transmission, Inc., or its parent, without placing any undue burden thereon, and does not require the enlargement of transportation facilities for such purposes or impair the ability of Granite State Gas Transmission, Inc., or its parent, to render adequate service to their customers.

OPINION NO. 481

NIAGARA MOHAWK POWER CORPORATION, PROJECT NOS. 2318, 2320, 2330 AND 2424

OPINION AND ORDER ON REHEARING DETERMINING LIABILITY FOR ANNUAL CHARGES

(Issued November 15, 1965)*

Syllabus

1. Since project was not constructed in violation of Section 23(b) of Federal Power Act and there was no finding of navigability after Section was approved, backdating license only to April 1, 1962 was entirely consistent with *Androscoggin* criteria. PP. 1299, 1300.
2. Licenses issued for constructed projects are made retroactively effective to insure that licensees have same rights and obligations as they would have had if they had made timely applications therefor. P. 1300.
3. Backdating retroactively imposes certain license obligations: licensee must pay annual charges for cost of administering Part I of Federal Power Act for past license period; net investment in project is calculated as of effective date of license; and amortization reserves from excess profits are also established on this basis. P. 1300.
4. Had Commission made licenses effective in 1962, as Niagara contends, it would be granting an advantage over those licensees who made timely applications. P. 1300.
5. Impropriety of extending benefits of *Androscoggin* to projects constructed, in whole or in part, after enactment of Section 23(b) or to projects operated on waters found navigable after 1935 has been made clear; as to former category, Commission held licenses would be effective from date of construction; in latter category licenses would be effective from date of finding of navigability. P. 1301.
6. Instant decision is predicated upon discretionary power explicitly delegated to Commission under the Act, particularly Sections 6, 10(g) and 309. P. 1301.
7. Section 10(e) of Power Act does not require that aggregate annual charges for all licenses exactly equal Commission's costs for administering Part I nor has Commission interpreted the section as so requiring. P. 1302.
8. 45 years of administrative interpretation indicates that there need be no precise correlation between annual charges and administrative costs. P. 1302.
9. Purpose of imposing annual charges from effective date of backdated license is not simply to recover administrative costs but also to prevent discrimination against licensees who timely complied with licensing requirements. P. 1302.
10. Backdated licenses require payments of annual charges from effective date of license, for there administrative charges and all benefits and obligations become operative. P. 1302.
11. There is no reason why backdating should not logically apply to creation of an amortization reserve pursuant to Section 10(d) as well as Section 10(e). P. 1303.

---

* Initial decision appears on p. 1303.

12. In a proceeding arising under Part I of the Federal Power Act, Commission *denies* applications to amend licenses and *determines* liability of annual charges.

Lauman Martin for Niagara Mohawk Power Corporation.
George F. Bruder for the Staff of the Federal Power Commission.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

BAGGE, *Commissioner:*

This proceeding is before us on the Niagara Mohawk Power Corporation's (Niagara) application for rehearing of (1) statements of annual charges for three of its existing licensed projects [1] and (2) an order issuing a license for another existing project.[2]

Project No. 2318 is located on the Sacandaga River at Hadley and Conklingville, New York. Project Nos. 2320 and 2330 are located on the Racquette River in St. Lawrence County, New York. Construction work was performed on these projects at various times between 1902 and 1930. Project No. 2424 was constructed in 1941 at Lockport, New York, on the Erie Canal, which is part of the New York State Barge Canal System. Licenses for Project Nos. 2318, 2320 and 2330, issued in 1963 and 1964, were accepted by Niagara. The license for Project No. 2424, issued in 1964, was not accepted by Niagara.

The Commission issued statements of annual charges for the cost of administering Part I of the Federal Power Act on the three accepted licenses totaling $174,259.05, covering the periods from the effective dates of the licenses through 1963. Niagara applied for rehearing of these statements on August 12 and November 10, 1964. On January 7, 1965, Niagara applied for rehearing of our order issuing license for Project No. 2424. We granted rehearing on all applications and consolidated the proceedings.

Presiding Examiner Francis L. Hall issued an initial decision on July 12, 1965. This decision directed Niagara to pay the annual charges as assessed for Project Nos. 2318, 2320, and 2330, and to accept and return to the Commission the license issued for Project No. 2424. The Examiner also recommended that the Commission impose retroactive administration charges for Project No. 2438 of the New York State Electric and Gas Corporation from the date of passage of the original Federal Water Power Act on June 10, 1920, rather than from April 1, 1962, the first day of the month in which the Commission issued the decision establishing the present criteria for backdating. *Public Service Company of New Hampshire*, 27 FPC 830 (*Androscoggin*). The Examiner considered that the Commission, in imposing annual charges for this project only from 1962, inadvertently departed from the *Androscoggin* criteria. This recommendation is beyond the scope of this proceeding. Furthermore, we consider that backdating the license for Project No. 2438 to 1962 was entirely consistent with the *Androscoggin* criteria. This

[1] Project Nos. 2318, 2320 and 2330.

[2] Project No. 2424. The dates of issuance, effective dates and termination dates of the licenses are as follows:

Project	Date of licensing order	Effective date	Termination date
2318	June 25, 1963, 29 FPC 1290	Apr. 1, 1949	Dec. 31, 1993
2320	June 12, 1964, 31 FPC 1549	Nov. 1, 1949	Dec. 31, 1993
2330	July 15, 1964, 32 FPC 125	Nov. 1, 1949	Dec. 31, 1993
2424	Dec. 9, 1964, 32 FPC 1404	July 1, 1941	June 30, 1991

project, like Niagara Mohawk's Project No. 2424, is located on the Erie Canal, which was found navigable in 1903. However, Project No. 2438, unlike Project No. 2424, was built before Section 23(b) was added to the Act in 1935. Since the project was not constructed in violation of this provision, and since there was no finding of navigability after the provision was approved, we believe that the owner qualified to have the license backdated only to April 1, 1962, the first day of the month in which the *Androscoggin* decision was issued. Niagara filed exceptions to the Examiner's decision. The objections of Niagara will be discussed seriatim.

The issues presented here are whether the Commission has authority (1) to backdate a license for a constructed hydroelectric development, (2) to require a licensee to pay retroactive annual administrative charges under subsection 10(e), and (3) to establish amortization reserves under subsection 10(d) of the Federal Power Act on the basis of effective date of the license.

Upon review of the record, the briefs and exceptions, we are of the opinion that the Examiner's findings and conclusions are correct.

Underlying each of the issues in this proceeding is the fundamental question of the scope of Commission discretion under the Federal Power Act. Enacted in 1935, Section 23(b) of the Act provides that it shall be unlawful for any person for the purpose of developing electric power to construct, operate or maintain any dam across any of the navigable waters of the United States except under a license granted pursuant to the Act or a Federal permit granted prior to June 10, 1920.[3] The object of making licenses issued for constructed projects retroactively effective is to insure that licensees have the same rights and obligations as they would have had if they had made a timely application for license. Backdating retroactively imposes certain license obligations. The licensee must pay annual charges for the cost of administering Part I of the Federal Power Act for the past period of the license. In addition, the licensee's net investment in the project is calculated as of the effective date of the license. Amortization reserves from excess profits are also established on the basis of this date.

While the Commission found the rivers navigable in 1949,[4] Niagara did not apply for a license for Projects 2318, 2320 and 2330 until 1962, an interval of thirteen years. The interval was greater in the case of Project 2424 since the determination of navigability had already been made in 1903 when the project was completed in 1941.[5] Application for a license was not made, however, until the end of 1963. However, the Commission treated Niagara as though it had applied for licenses when its obligation became clear by making the license for the first three projects effective in 1949 and making the license for Project 2424 effective in 1941. Had we made the licenses effective in 1962, as Niagara contends, we would be granting Niagara an advantage over those licensees who made timely application for license.

In reaching this result we are fully supported by *Central Maine Power Company* v. *F.P.C.*, 345 F. 2d 875 (CA1–1965). We also follow the approach used in *Public Service Company of New Hampshire*, 27 FPC 830 (1962), (*Androscoggin*). In *Central Maine, supra*, the company commenced construction in 1937. We made the license retroactively effective as of January 1, 1938. The court held that:

> In such circumstances in our opinion it is neither discriminatory nor a true penalty for the Commission to treat petitioner in the terms of its

[3] 16 U.S.C. 817.

[4] *New York Power and Light Corp.*, 8 FPC 231 (1949); *Central New York Power Corp.*, 8 FPC 390 (1949).

[5] *Robert W. Parsons*, 191 U.S. 17, 27 (1903).

license as it would have treated it had it complied with the statute when it should have. It is a familiar principle of equity itself to regard as being done that which should have been done. Any possible discrimination would be the other way. Were petitioner to prevail, parties like Wisconsin Public Service Corp. who had complied with the law would be worse off than those who did not.

In *Androscoggin, supra*, the project had been built and improved before 1935. The dam was replaced in 1958 and 1959. On July 24, 1958, the Commission found that the Androscoggin River is a navigable water of the United States. The company, however, did not make application for a license for its constructed project until December 27, 1960. Taking into consideration the gradual development of the concept of navigability, the failure to apply for a license, and the doubt as to the exact date of construction in 1958, the Commission made the effective date of the license July 1, 1958, the first day of the month in which navigability had been determined.

The Commission made it clear that it would be improper to extend the benefits of *Androscoggin* to projects which had been constructed, in whole or in part, after Section 23(b) had been added to the Act in 1935 or to projects operated on waters which had been found navigable after that time. We held that as for projects in the former category, we would make the licenses effective from the date of construction while projects in the latter category would be granted licenses effective from the date of the finding of navigability. We have dated the licenses for Niagara's four projects accordingly.

Central Maine, supra, refers to broad equitable considerations as support for the Commission's authority to backdate licenses. In addition to these considerations, we conclude that the Federal Power Act is broad enough to encompass this exercise of our discretion. Section 6 makes licenses subject to conditions imposed by the Act and the Commission.[6] Section 10(g) authorizes the Commission to impose "such other conditions not inconsistent with the provisions of this Act as the Commission may require."[7] In *Metropolitan Edison Co.* v. *F.P.C.*, 169 F. 2d 719 (CA3–1948), the court held that Section 10(g) gives the Commission "wide latitude and discretion in the performance of its licensing and regulatory functions" and authorizes the Commission to determine the actual legitimate original cost and accrued depreciation applicable to a project as of the effective date of the backdated license. Moreover, Section 309 gives the Commission broad power "to perform any and all acts * * * it may find necessary or appropriate to carry out the provisions of this Act."[8] We accordingly predicate this decision upon our discretionary power which has been explicitly delegated to us under the Act.

Niagara argues that under Section 10(e) the licensee is to pay reasonable annual charges "in an amount to be fixed by the Commission for the purpose of reimbursing the United States for the costs of the administration" of Part I of the Federal Power Act. It objects to being required to pay a share of the costs, irrespective of whether the Commission was fully reimbursed in the past. Without a showing of a deficit, Niagara asserts, the annual charges constitute a penalty unauthorized by the statute. In support of this argument, Niagara cites Section 11.20(a)(1) of the Commission's Regulations under the Federal Power Act which reads: "A determination shall be made for each fiscal year of the costs of administration of Part I of the Federal Power Act chargeable to such licensees * * *." Niagara contends that there

[6] 16 U.S.C. 799.
[7] 16 U.S.C. 803(g).
[8] 16 U.S.C. 825(h).

has not been a sufficient showing in support of the charges under the Act and the Regulations.

Section 10(e) of the Federal Power Act does not require that the aggregate annual charges for all licenses exactly equal the Commission's costs for administering Part I of the Act and the Commission has not interpreted the section as so requiring. Between 1938 and 1963 the Commission's regulations provided that annual charges be fixed according to the annual generation and the authorized installed capacity of a licensed project, without reference to the cost of administration. The present regulation (§ 11.20) cited by Niagara did not become effective until January 1, 1964, after the period of the charges assessed in this proceeding (See Order No. 272, 30 FPC 1333), and while that regulation seeks to more closely correlate annual charges and cost of administration, it may not fully achieve this purpose. The reason is that annual charges being paid under licenses issued prior to August 26, 1935, are frequently too low to bear their proportionate share of annual administration costs under the present regulation and the Commission has held that charges under pre-1935 licenses may not be increased under the terms of those licenses. See Order No. 272–A, 31 FPC 1555. We believe that 45 years of administrative interpretation indicates that there need not be a precise correlation between annual charges and administrative costs.

Moreover, the purpose of imposing annual charges from the effective date of a backdated license is not simply to recover administrative costs. It is also to prevent discrimination against licensees who timely complied with the licensing requirements of the Act. *Central Maine Power Co.* v. *F.P.C.*, 345 F. 2d 875, 876–877 (CA1–1965); see also *Metropolitan Edison Co.* v. *F.P.C.*, 169 F. 2d 719, 724 (CA3–1948). Even if the former purpose had been fully realized, we would be justified in retroactively imposing annual charges for the latter purpose.

Niagara argues that its licenses for Project Nos. 2318, 2320 and 2330 do not, by their terms, provide for fixing of annual charges for the past period of the licenses. This argument is based upon a distinction in the terms of these licenses from the terms of the licenses issued in *Androscoggin, supra*, and Niagara's Project 2424. The article of the *Androscoggin* license relating to annual charges reads: "Article 18. The Licensee shall pay to the United States the following annual charges, effective as of July 1, 1958 * * *." The parallel provisions of the licenses for Project Nos. 2318, 2320 and 2330 do not provide for an effective date. Niagara contends that this omission indicates an intent to waive the payment of annual charges for the past period of the licenses.

The licenses issued for Projects 2318, 2320 and 2330 do require payment of annual charges for the period before the date of issuance. The licensing order for Project 2318 specifically provides that the license is issued "for a period effective as of April 1, 1949," while the licensing orders for the other two projects provide for an effective date of November 1, 1949. Once the license is effective, the administrative charges and all of the benefits and obligations of the license become operative. Section 11.28 of the Regulations provides that, with certain exceptions, annual charges "shall commence upon the effective date of the license." Here, the order issuing licenses for Projects 2318, 2320 and 2330 specifically designated effective dates in 1949. No other dates were fixed for the accrual of annual charges. Each license contains an article specifying the method for fixing annual charges.[9] Like other license obliga-

[9] Project No. 2318: Article 21; Project Nos. 2320 and 2330: Article 29.

tions, the obligation to pay annual charges under this article becomes operative from the effective date of the license. The effective date of the license is not the date the license order becomes final, as suggested by Niagara. Nor is it significant, in view of the wording of the Regulations, that the order in *Androscoggin, supra*, and the order in Project 2424 expressly provided that the annual charges be effective as of the effective date of the license.

With respect to Project 2424, Niagara contends that backdating does not apply to the creation of an amortization reserve pursuant to subsection 10(d) of the Act. We conclude that there is no reason why backdating should not logically apply to Section 10(d) as well as to Section 10(e).

The Commission further finds:

(1) Upon consideration of the record made in this proceeding, there is no reason to modify the Commission's orders issuing licenses for Project Nos. 2318, 2320, 2330 and 2424 or the amount of $174,259.05 billed Niagara for annual charges for administration for the periods April 1, 1949–December 31, 1963 (for Project 2318) and November 1, 1949–December 31, 1963 (for Projects 2320 and 2330) where the beginning dates for the charges are the effective dates of the licenses.

(2) The assignments of error and grounds for rehearing set forth in the applications for rehearing or the record made herein present no facts or legal principles which would warrant any change or modification in the Commission's order issued December 9, 1954, granting a license in Project 2424, or the statements of annual charges applicable to Project Nos. 2318, 2320, and 2330 issued under the Federal Power Act, especially Section 10(e) (16 U.S.C. 803(e)).

The Commission orders:

(A) The Niagara Mohawk Power Corporation's applications to amend or modify the licenses for Project Nos. 2318, 2320, 2330 and 2424 are denied.

(B) The Niagara Mohawk Power Corporation's applications to cancel or modify the statements of annual charges in the amount of $174,259.05 for Project Nos. 2318, 2320 and 2330, covering the periods from the effective dates of the licenses through 1963, are denied.

(C) The Decision of the Presiding Examiner is adopted as the decision of the Commission except where inconsistent herewith.

(D) Exceptions not granted are denied.

INITIAL DECISION

OF THE PRESIDING EXAMINER UPON AUTHORITY OF THE COMMISSION TO ASSIGN A RETROACTIVE EFFECTIVE DATE TO BE USED IN FIXING OBLIGATIONS TO PAY ANNUAL CHARGES AND TO SET UP AMORTIZATION RESERVES FOR CONSTRUCTED HYDROELECTRIC PROJECTS

(Issued July 12, 1965)

HALL, *Presiding Examiner:* Niagara Mohawk Power Corporation (Niagara Mohawk) applied for, and the Commission issued, a license for each of the four hydroelectric projects involved in this proceeding, all of which had been constructed and maintained on navigable waters of the United States without the requisite federal authorization. The licenses issued for Projects 2318, 2320 and 2330 (constructed prior to the 1935 amendment of Section 23(b) of the Federal Power Act (Act)) have been accepted by Niagara Mohawk. However, the company has so far declined to accept the license tendered for Project 2424 (constructed in its present form in 1941 in violation of Section 23(b)).

The dates of issuance of the licensing orders and the effective and termination dates of the licenses are:

Project	Date of licensing order	Effective date	Termination date
2318	June 25, 1963	Apr. 1, 1949	Dec. 31, 1993
2320	June 12, 1964	Nov. 1, 1949	Dec. 31, 1993
2330	July 15, 1964	Nov. 1, 1949	Dec. 31, 1993
2424	Dec. 9, 1964	July 1, 1941	June 30, 1991

The significance of the effective date of each license (as distinguished from the date of the licensing order) is that such date controls Niagara Mohawk's obligation to pay annual charges and—after twenty years—to create amortization reserves.

Licenses, under Section 6 of the Act, are to be issued for not more than fifty years. They shall, under Sections 6 and 10, include as conditions, *inter alia:* (a) acceptance by the licensee of all the terms and conditions of the Act and such further conditions as the Commission shall prescribe in conformity with the Act (Section 6); (b) maintenance of amortization reserves by the licensee after the twentieth year of operation out of surplus accumulated in excess of a reasonable rate of return, the reserves to be applied in reduction of net investment should the project be taken at the expiration of the license (Section 10(d);[1] and (c) payment by the licensee of reasonable annual charges to reimburse the United States for the cost of administration (Section 10(e)).[2]

To serve the purposes of the Act and to cause Niagara Mohawk to assume some of the obligations it would have borne had it obtained the licenses when it should have, the Commission, in prescribing the terms and conditions of each license, took into consideration the prior unlicensed construction and operation by, *inter alia*, (a) limiting the term of the licenses, and (b) imposing obligations to pay annual charges and set up amortization reserves based on the retroactive date of each license.

---

[1] The amortization reserve requirement, as explained by the Supreme Court, is as follows (*Federal Power Commission* v. *Niagara Mohawk Power Corp.*, 347 U.S. 239, 242): "Section 10(d) of the Act requires each licensee, after 20 years of operation under such a license, to establish and maintain amortization reserves out of any surplus thereafter earned and accumulated in excess of a reasonable return upon the licensee's net investment. Section 14 makes such net investment, plus severance damages a principal measure of the price the Government is to pay when and if it takes over all or part of the property. [Citing to a footnote in which the Court said, "In the instant case the Commission explains that — 'Section 10(d) is part of a larger pattern of fairness set up by the act to induce water-power development. Licensees are assured a 'fair return', but the public is safeguarded against profiteering by a licensee through profits beyond a fair return. At the end of the license period and upon 'recapture' by the Federal Government, earnings throughout the license period are to be tested against a fair return standard set up in section 3(13).' 9 FPC at 248"]"

[2] Section 10. "All licenses issued under this Part shall be on the following conditions: * * * (e) That the licensee shall pay to the United States reasonable annual charges in an amount to be fixed by the Commission for the purpose of reimbursing the United States for the costs of the administration of this Part, * * * and in fixing such charges the Commission shall seek to avoid increasing the price to the consumer of power by such charges, and any such charges may be adjusted from time to time by the Commission as conditions may require * * *. In the event an overpayment of any charge due under this section shall be made by a licensee, the Commission is authorized to allow a credit for such overpayment when charges are due for any subsequent period."

Contentions Of Niagara Mohawk

For the projects covered by the three accepted licenses the Commission billed Niagara Mohawk a total of $174,259.05 for annual charges for administration for the 1949–1963 period. Niagara Mohawk contends that the accepted licenses do not by their terms require payment of annual charges from retroactive effective dates but only call for the payment of such charges from the license order issuance dates, or, at the earliest, April 25, 1962 (date of the Commission's licensing opinion in *Public Service Company of New Hampshire*, 27 FPC 830, herein referred to as the *Androscoggin* decision, which enunciated the policy to be followed with respect to constructed hydroelectric projects.)[3]

As to the license tendered for Project 2424, which has not yet been accepted, Niagara Mohawk contends that this license should be modified to indicate that its effective date for all purposes should be December 9, 1964, *i.e.*, the date of the licensing order, or in any event, no earlier than *Androscoggin* day—April 25, 1962

The Examiner has determined that the arguments advanced by counsel for Niagara Mohawk, considered *infra*, pp. 1309–1317, do not warrant any change in the original license orders which reasonably imposed the license conditions here challenged.

Scope Of Review Available To The Examiner

This case presents for consideration the scope of review available to the Examiner—on rehearing ordered by the Commission—of the previously established and consistently adhered to policy announced in *Androscoggin*, that being a decision which the Act commits to the sound discretion of the Commission.

In view of the right and duty of the Commission to establish what its policy should be as to projects constructed without federal authorization, the Examiner must accept the expressly declared policy set forth in *Androscoggin* as binding upon him, for neither an Examiner nor the courts may invade the domains of action reserved exclusively for the Commission. The Commission may, of course, change its policy at such times as circumstances and its statutory authority warrant.[4]

It may be observed in passing that it is possible to conceive of more than one method of dealing with unlicensed projects and the Commission undoubtedly considered several in arriving at its *Androscoggin* decision. But the Commission's action does not become suspect because in the opinion of others a method other than the one adopted by the Commission in *Androscoggin* would be preferable. The Commission may clearly adopt one method as opposed to another so long as the one adopted does not represent an abuse of discretion.

Proceedings Before The Commission

The applications for rehearing filed by Niagara Mohawk were consolidated for hearing by order of the Commission issued March 4, 1965. That order

[3] In *Androscoggin* the Commission considered a problem which had "perplexed the Commission for many years, *i.e.*, the appropriate license term to be accorded a project constructed prior to the 1935 amendments to the Act and operated thereafter in navigable waters without requisite federal authorization" (27 FPC at 832).

[4] It should also be pointed out that the facts and circumstances to be considered by the Examiner are the same as those available for the Commission's consideration in issuing the licenses—on the basis of the applications and without hearing—to Niagara Mohawk. As the Supreme Court has said, "There must be a limit to individual argument in such matters if government is to go on" (*Bi-Metallic Investment Co. v. Colorado*, 239 U.S. 441, 445).

fixed April 19, 1965—later changed to April 20—as the date for prehearing conference.

The four licenses had been issued upon applications of Niagara Mohawk without an initial hearing. The consolidated rehearing record, consisting of an 82-page transcript, one exhibit and one item by reference, was made by stipulation between counsel for Niagara Mohawk and the Commission staff at the conference held April 20, 1965.

Main and reply briefs were filed on June 8 and 22, 1965, respectively.

Part I Of The Act

Part I of the Act vests in the Commission jurisdiction over the licensing, regulation and control of hydroelectric projects subject to federal jurisdiction. It limits the term of licenses to not more than fifty years and reserves to the United States the right of recapture at the end of the lease period. Upon expiration of the franchises the Government has the option of (1) taking over the license upon payment of the net investment not to exceed fair value, plus reasonable severance damages; (2) renewing the old license; or (3) granting a new one. That is to say, Part I "proceeds upon the theory of private development with ultimate public ownership possible" (S. Rep. No. 180, 66th Cong., 1st Sess., p. 3).

With the establishment of the Commission in 1920 it was no longer necessary for Congress to consider each project separately and enact special legislation in granting the consent of Congress, where appropriate, to construct and operate individual projects. Under the Act, once the Commission's jurisdiction to issue a license is determined; the only questions remaining are whether a license should issue, and, if so, the conditions under which it should be issued, the intent of the Act being to assure through the imposition of appropriate conditions, the accomplishment of its purposes.

1935 Amendment To Section 23(b) Of The Act

In 1935 the original Federal Water Power Act of June 10, 1920—which had created the Commission—was generally revised and perfected and made Part I of the present Act. Among other things, the 1935 amendments changed Section 23(b) to make it unlawful for any person for the purpose of developing electric power to construct, operate, or maintain any dam across or in any navigable waters of the United States "except under and in accordance with the terms of a permit or valid existing right-of-way granted prior to June 10, 1920, or a license granted pursuant to this Act"[5] As stated in *First Iowa Hydro-Electric Cooperative* v. *Federal Power Commission*, 328 U.S. 152, 172, n. 17, the 1935 amendments, *inter alia*, changed Section 23(b) so—

> * * * as expressly to require a federal license for every water power project in the navigable waters of the United States. It also made mandatory, instead of discretionary the filing * * * of a declaration of intention by anyone intending to construct a project in non-navigable waters over which Congress had jurisdiction under its authority to regulate commerce.

---

[5] The reference in Section 23(b) to "a permit or valid existing right-of-way granted prior to June 10, 1920," is to those granted under federal, not state, law. *Niagara Falls Power Co.* v. *Federal Power Commission*, 137 F. 2d 787, cert. den., 320 U.S. 792. *Wisconsin Public Service Corp.* v. *Federal Power Commission*, 147 F. 2d 473, cert. den., 325 U.S. 880. See also *United States* v. *Appalachian Power Co.*, 311 U.S. 377, 428–29; *First Iowa Hydro-Electric Cooperative* v. *Federal Power Commission*, 328 U.S. 152.

In *Androscoggin* the Commission emphasized the fact that "any uncertainty there might have been as to the legal status of an unlicensed power project occupying a navigable stream vanished with the adoption of Section 23(b) in 1935. From that point on, if not earlier, a license from this Commission was clearly mandatory. Unfortunately, the Commission has lacked sufficient funds or man power to enforce general compliance with the statute * * *." (27 FPC at 833)

Application Of Androscoggin *Criteria To Licenses Issued To Niagara Mohawk*

As previously mentioned, the Commission in 1963 and 1964 issued licenses for Niagara Mohawk's four projects. Three of those projects (2318, 2320 and 2330) were pre-1935 and one (2424) was constructed in its present form after 1935.

In *Androscoggin* the Commission fixed the effective date of the license for that pre-1935 project at July 1, 1958, that being the first day of the month in which the Commission had held the Androscoggin River to be a navigable water of the United States.[6] Each of the licenses issued to Niagara Mohawk recites that its effective date was fixed in "accordance with the criteria set forth in" *Androscoggin*.

Niagara Mohawk's Project 2318 is located on the Scandaga River. Its Projects 2320 and 2330 are located on the Raquette River. The licenses for these projects were made effective from the first day of the month in which the Commission had determined these rivers to be navigable waters (8 FPC 231, 390).

The other Niagara Mohawk project (2424) was constructed in its present form in 1941 on the Erie Canal (now known as the New York State Barge Canal) by the company's predecessor. The license for this development was made effective July 1, 1941, that being the approximate date when construction was initiated. In *Androscoggin* the Commission explained (27 FPC at 834) that—

> * * * if Applicant, subsequent to 1935, had built an entirely new project without securing the requisite authorization, we would not hesitate to adopt the date of such construction as the effective date of its license. We see no reason for different treatment merely because the unauthorized construction took the form of a replacement of an existing facility. * * *

In *Androscoggin* the Commission discussed three principal factors to be taken into account in licensing constructed projects.

(1) The first was that persons who continued to maintain and operate existing projects after the 1935 amendment of Section 23(b) without obtaining a license should not be rewarded for their failure to timely apply for licenses (27 FPC at 833):

> * * * If a company whose project has enjoyed three or more decades of unregulated operation were granted a full 50-year license term from date of issuance, it would reap a substantial windfall from its prolonged delay in filing. Equally important, it would obtain an unmerited advantage over those companies which complied at an earlier date, inasmuch as projects of the latter will be subject to recapture well within the next

[6] The project involved in *Androscoggin* had been constructed on the Androscoggin River in 1894, with various parts thereof being replaced and some added at various times—1903, 1909, 1917, 1923, 1927, 1928, 1937 and 1958–59 (27 FPC at 832). Public Service Company of New Hampshire acquired the project in 1943 and applied for a license in 1960 after the Commission, in another proceeding involving the Androscoggin River had found that the river was a navigable water of the United States on the basis of the transportation of logs and other forest products.

50 years. To the extent feasible, it is the burden of sound licensing policy to minimize such inequities.

(2) On the other hand, the Commission determined not to adopt a harsh policy as to pre-1935 projects but one recognizing that the full extent of its jurisdiction had not always been understood (27 FPC at 833–34).

(3) In fixing the effective date of the *Androscoggin* license at July 1, 1958, when the Commission had first held the Androscoggin River to be a navigable water of the United States, the Commission took into account as a third factor the possible effect of backdating the license on the incentive of other owners of unlicensed projects to apply for licenses (27 FPC at 834):

> In deciding not to impose retrospective charges for the period prior to July 1, 1958, we have given some weight to the possibility that imposition of such charges might seriously deter potential applicants from coming forward to comply with the statute. If, however, our experience during the next twelve months indicates that voluntary cooperation will in any event not be forthcoming, we may well wish to reconsider the position we now take on the question of backdating.

But the considerations which support the Commission's policy of leniency with respect to setting the effective date for pre-1935 projects are not controlling with respect to projects, such as Niagara Mohawk's Project 2424, constructed *after* 1935. For as the Commission expressly stated in *Androscoggin* (27 FPC at 832, n. 2):

> The construction of any project works *subsequent* to the enactment of Section 23(b) of the Act of 1935 without the concurrent filing of a license application or declaration of intention plainly violates this section. There is little room for dispute that licenses for such projects should be made effective not later than the date of construction of such project works.

The Commission's approach to the licensing of the pre-1935 projects, insofar as it differs from the policy with respect to post-1935 projects, appears to reflect its awareness of the distinction between lawful conduct and unlawful conduct. As to the pre-1935 projects the Commission assumes in the owner's favor, that the owner had been reasonable in all its conduct in constructing and operating its unlicensed project, and that it would therefore be an improper penalty to require a license effective as of the date of construction. But as the Commission's staff observed in their court brief in the recent *Central Maine* case discussed *infra*, p. 1310, "anyone seeking to construct a project * * * *after* 1935 was plainly required to seek and obtain Commission authorization, either by license or by a finding that the project did not affect the interests of interstate or foreign commerce. A person in this position could not lawfully remain silent while proceeding with construction, operation, and maintenance of his project. For those who followed such a course of action, the Commission's policy seeks to remedy the violation of Section 23(b) by conditioning the license so as to treat the project as though it had been constructed in compliance with the Act."

As the foregoing makes clear, the Commission, in licensing Niagara Mohawk's four hydroelectric projects, adhered to its *Androscoggin* criteria. Nothing in the record or in the decisions of the Courts justify Niagara Mohawk's undertaking to nullify that criteria. In this connection it seems appropriate to quote the words of the Court in *Portland General Electric Co.* v. *Federal Power Commission*, 328 F. 2d 165, 173:

> * * * In applying for a major license * * *, petitioners seek rights they do not now have. In order to gain those rights they must accept the license upon such terms as Congress has determined should be imposed in the public interest. See *United States* v. *Appalachian Elec. Power Co.*,

311 U.S. 377, 427–428, 61 S. Ct. 291, 85 L. Ed. 243, *Fox River Paper Co.* v. *Railroad Comm. of Wisconsin*, 274 U.S. 651, 656–657, 47 S. Ct. 669, 71 L. Ed. 1279. It is not a taking for the Government to withhold a benefit it is not contractually or constitutionally obligated to confer. Nor is it a taking for the Government to impose financial obligations upon the recipient of a benefit if, as here, the benefit may be declined.

Commission's Backdating Authority

Reference has been made to the fact that the statutory provision with respect to the term of the license is found in Section 6, with respect to annual charges in Section 10(e), and with respect to amortization reserves in Section 10(d). But there is no section specifically governing the effective date of the license, the Commission's power in this respect being found in (1) Section 10(g) which authorizes the Commission to impose, as a condition for obtaining a license, "Such further conditions not inconsistent with the provisions of this Act as the Commission may require", and (2) Section 309 of Part III of the Act (which also relates to licensees) which expressly confers upon the Commission broad power "to perform any and all acts * * * it may find necessary or appropriate to carry out the provisions of this Act." The provisions of Section 309 are identical to those of Section 16 of the Natural Gas Act considered in *Public Service Commission of the State of New York* v. *Federal Power Commission*, 327 F. 2d 893, 897, where the court points out that—

> All authority of the Commission need not be found in explicit language. Section 16 demonstrates a realization by Congress that the Commission would be confronted with unforeseen problems of administration in regulating this huge industry and should have a basis for coping with such confrontation. While the action of the Commission must conform with the terms, policies and purposes of the Act, it may use means which are not in all respects spelled out in detail. * * *

While instances abound in which the Commission has backdated or otherwise limited the license term and imposed obligations to pay annual charges and set up amortization reserves based on the effective date of the license, its authority so to do has rarely been challenged in the courts. The challenges made have been unsuccessful insofar as the questions here raised are concerned.

The court cases now to be reviewed, together with the statutory authority contained in Sections 6 and 309 of the Act, clearly show the lack of merit to Niagara Mohawk's contention that the Commission erred in assigning retroactive dates to be used in fixing its obligations to pay annual charges and set up amortization reserves.

In *Montana Power Corp.* v. *Federal Power Commission*, 330 F. 2d 781, 788–9, the court upheld the Commission's order fixing a term of seven years for a license for a project constructed prior to June 10, 1920, saying:

> * * * Section 6 * * * provides that the term of a license is within the sound discretion of the Commission. In our opinion it has not been shown that the Commission abused its discretion in fixing the term * * *.

Metropolitan Edison Co. v. *Federal Power Commission*, 169 F. 2d 719, like the instant proceeding, involved a project where the construction, operation and maintenance of a project were originally not legally authorized. The court there upheld the issuance of a license on November 7, 1944, backdated to January 1, 1938, and terminating June 30, 1970 (*i.e.*, 50 years after the enactment of the Federal Water Power Act in 1920). The project had been constructed in 1904 but application for license was not made until 1942. Among the conditions attached to the *Metropolitan Edison* license were condi-

tions like those involved here—one requiring the payment of annual charges "starting January 1, 1938, for purposes of reimbursing the United States for the costs of administration of Part I of the Act," and another requiring the establishment of an amortization reserve after the first twenty years of operation under the license "namely after December 31, 1957."[7] The retroactive effective date and the 1970 termination date (which resulted in an actual license period of approximately 26 years) were not challenged on appeal. Nor did the company object to the retroactive imposition of annual charges or to the 1938 starting date utilized in computing the first twenty years of operation under the license.

In *Metropolitan Edison* the court recognized that the Commission was not required to allow the company to enjoy a more favorable regulatory position by reason of its failure to obtain a license at the time of the passage of the Water Power Act in 1920. In affirming the Commission's order the court explained (169 F. 2d at 723–24):

> It is clear from the Act that Congress contemplated the licensing of new projects: see Section 3(13); and of old projects in existence under permit; see Section 23(a). Congress must also have had in mind the fact that there were many projects already in existence, not under permit. We think it was the Congressional intent by the enactment of Section 10(g) to give to the Commission wide latitude and discretion in the performance of its licensing and regulatory functions and that Congress must have contemplated the licensing by the Commission of old projects, * * * not under the provisions of Section 10(g). We think it is clear that the conditions of Paragraph (A) (viii) are not inconsistent with the Federal Power Act, are not in the least arbitrary or unreasonable, and that therefore the Commission possessed the authority to impose them on Metropolitan. * * *
>
> * * * We may not conclude that an existing project, not under permit, should be put in a better position as to value for regulatory purposes under a federal license than an existing project under permit. * * * The Act must receive a practical construction, one which will enable the Commission to perform the duties required of it by Congress. See *Clarion River Power Co.* v. *Smith*, 61 App. D.C. 186, 59 F. 2d 861, 863. We think that Section 10(g) authorized the Commission to impose the formula * * * and we so rule.

The most recent court decision is *Central Maine Power Co.* v. *Federal Power Commission*, 345 F. 2d 875 (CA1–1965). In this case the Court upheld the issuance of a license retroactively dated January 1, 1938 (the project having been constructed without a license in 1937), and expiring December 31, 1978. The effect of the Commission order was to shorten the maximum 50-year term to an effective term of 24 years and, like the conditions involved in the instant proceeding and in *Metropolitan Edison*, *supra*, to impose retroactively requirements for the payment of annual charges for the purpose of reimbursing the United States for the cost of administration and for the establishment of an amortization reserve after the twentieth year of operation. Central Maine contended—

> * * * that it has been discriminated against because if it had constructed its plant prior to 1935 no such retroactivity, admittedly, see * * * [the Commission's *Androscoggin* opinion] * * * would have been imposed upon it. The Commission's response is that in 1937 petitioner knew, or should have known that it was obliged to apply for a license

[7] The Commission's order setting forth the license terms is not reported but may be officially noticed by the Examiner.

forthwith, or, at least file a declaration of intention to build, and that, under the cited case, all parties who neglected to do what they reasonably should have done were properly treated by having retroactivity imposed upon them.

The Court ruled that—

> * * * it is neither discriminatory nor a true penalty for the Commission to treat petitioner in the terms of its license as it would have treated it * * * had it complied with the statute when it should have. It is a familiar principle of equity itself to regard as being done that which should have been done. Any possible discrimination would be the other way. Were petitioner to prevail, parties * * * who had complied with the law would be worse off than those who did not.

The Licenses For Projects 2318, 2320 and 2330 By Their Terms Provide For Retroactive Imposition Of Annual Charges

As the following excerpt from the order issuing license for Project 2318, which is typical of the others, clearly demonstrates, Niagara Mohawk's contention that the three accepted licenses do not prescribe payment of administrative charges prior to the date of license issuance will not stand analysis:[8]

> * * * In accordance with the criteria set forth in * * * [Androscoggin] * * * we are making the effective date of this license April 1, 1949 * * *.
>
> * * * * * * *

The Commission orders:

(A) This license is hereby issued to Niagara Mohawk * * * for a period effective as of April 1, 1949 * * * for the continued operation and maintenance of Project No. 2318 * * *.

Not only does paragraph (A) of the ordering clause of each of the license orders expressly make the license retroactively effective from a stated date, but each license also contains an article specifying the method for fixing annual charges (Article 21 for Project 2318; Article 20 for Projects 2320 and 2330).

Whether the licenses for Projects 2318, 2320 and 2330 provide for retroactive imposition of annual charges depends upon their terms. From a review of the terms of these licenses, the Examiner is unable to see how the answer could possibly be otherwise than in the affirmative. The terms of these licenses are intended to, and do, carry to completion the statutory duty of causing Niagara

---

[8] Niagara Mohawk's argument is based on a divergence in the wording of its licenses from the wording in the license issued in *Androscoggin* (and, incidentally, also in the wording for Niagara Mohawk's Project 2424). The article of the *Androscoggin* license relating to annual charges reads in pertinent part (27 FPC at 838):

> *Article 18*: The Licensee shall pay to the United States the following annual charges, effective as of July 1, 1958 * * *.

The parallel provision of the license for Projects 2318, 2320 and 2330 deletes the phrase "effective as of [date]." Niagara Mohawk contends that this deletion indicates the Commission's intention to waive the payment of annual charges for the retroactive period of the license. But Niagara Mohawk cannot ignore the clear, unassailable language of paragraph (A) of the licensing orders with which it is also acquainted. These licenses, like statutes, are to be construed in their entirety, not in isolated parts. Repetition of the effective date in any article, in addition to the initial ordering clauses, could only have served the unnecessary purpose of emphasis. In this connection it is of interest to also point out that Niagara Mohawk applications for license were filed after, and pursuant to the invitation contained in, *Androscoggin* which made plain the significance of effective dates of licenses: "Applicant would be liable for annual charges commencing on such date and would be required [twenty years thereafter] to establish amortization reserves provided for in Section 10(d) of the Act" (27 FPC at 834).

Mohawk to contribute to the costs of administration. Sharing in the costs of administration from the effective date of a license is an obligation which no licensee should be permitted to shirk.

Niagara Mohawk's Contention That The Commission's Statements Of Administrative Charges Are Not Supported By The Cost Determination Criteria Of Part 11 Of The Commission's Regulations

As shown *supra*, p. 1304, n. 2, Section 10(e) of the Act obligates a licensee to pay a reasonable annual charge to the United States in amounts to be fixed by the Commission to reimburse the United States "for the costs of the administration" of Part I of the Act. It permits the Commission to adjust charges from time to time "as conditions may require." Part 11.20 of the Regulations, which proceeds upon the assumption that all projects subject to the Commission's jurisdiction are under license and will share in administrative costs, states that "a determination shall be made for each fiscal year of the costs of administration of Part I of the * * * Act chargeable of such licensees," *i.e.*, other than State or municipal licensees, and of more than 2000 horsepower installed capacity.

Niagara Mohawk received statements of annual charges for Projects 2318, 2320 and 2330 aggregating $174,259.05. It argues that even if retroactive charges can be imposed, the statements it received "are not supported by the required 'determination * * * for each fiscal year of the costs of administration of Part I' of the Act required in Part 11.20 of the Regulations"; that in the absence of such a showing, "the statements presented with respect to Projects 2318, 2320 and 2330 are not enforceable or collectable bills."

Staff counsel is of the view that the supporting information sought by Niagara Mohawk is not material to the resolution of the issues in this case. He contends that the court in the *Central Maine* case (*supra*, pp. 1310, 1311) made it clear that a prime objective of backdating licenses is to prevent, insofar as possible, those who have violated the Act from enjoying a better position than those who timely complied. He further points out that the Commission, by its Order Nos. 272 and 272-A, amended its regulations in 1963 for the express purpose of increasing annual charges to cover administrative costs;[9] that for reasons developed in Order 272-A annual charges even now do not cover all administrative costs.

The Commission is faced here, as it has been on other occasions, with the licensing of projects constructed and maintained without the requisite federal authority. Such cases cause the Commission to adjust its administrative machinery and actions to the necessity of dealing with such projects so as to (1) enable their continued operation in compliance with the law, and (2) keep those who ignored the law from obtaining unmerited advantage over those who complied therewith. In meeting this responsibility the Commission has, with court approval, *supra*, pp. 1309, 1311, considered it just and reasonable to, *inter alia*, impose annual charges from and after the retroactive effective date of a license. In this connection it recognized that it "may make the pragmatic adjustments called for by particular circumstances", *Federal Power Commission* v. *Natural Gas Pipeline Company of America*, 315 U.S. 575, 586, because this harmonizes with the purposes of the Act.

The only practical and reasonable procedure that the Commission can follow in assessing annual charges is to provide, as it has, a formula to be uniformly

[9] These orders were issued in Docket R-228 on November 20, 1963, 30 FPC 1333, and June 18, 1964, 31 FPC 1555, respectively. The notice of proposed rulemaking in this docket, issued on December 28, 1962, indicates that for the years 1960 through 1962 the Commission's collections fell short of its costs by $854,785.

applied to all licensees. It hopes that the formula will reimburse the United States for the costs of administration which vary from year to year. When the formula devised does not meet this objective, the costs not recovered from licensees must be paid for out of annual appropriations by Congress.

Congress clearly intended that the owners of all hydroelectric projects subject to the Commission's jurisdiction would share proportionately in the Commission's costs of administration and this is what the regulations also contemplate. Here instead of following the procedure for obtaining licenses and paying annual charges on a current basis, Niagara Mohawk rather tries to utilize a violation of the Act so as to nullify the annual charge requirement (*Cf. Pennsylvania Water & Power Co.* v. *Federal Power Commission*, 343 U.S. 414, 424). It cannot be permitted to succeed in this attempt. Compliance with the annual charge requirement is part of "the price which [Niagara Mohawk] must pay to secure the right to maintain" its projects (*United States* v. *Appalachian Electric Power Co.*, 311 U.S. 377, 427–28). The "bite of the law is in its enforcement" *Fisher* v. *United States*, 328 U.S. 463, 484.

In fairness to those who have timely complied with the law and paid annual charges according to the Commission's formula, and in order to avoid discriminating against non-violators in favor of violators, the Commission must cause violators to pay annual charges on the same basis on which the non-violators were assessed. If it can thereafter be determined that the aggregate amount assessed exceeds the total of the Commission's costs of administration to a significant degree, then all licensees would seem to be entitled to recoup a proportionate part of the overpayment. Section 10(e) so provides (see *supra*, p. 1304, n. 2). By way of contrast to what the statute requires, Niagara Mohawk is here in effect seeking a determination of Commission costs of administration for the 1949–1963 period upon the chance that it might disclose that the Commission has already recouped its costs for that period, thereby making any assessment against Niagara Mohawk unjustified. But since Niagara Mohawk must pay its fair share of such costs no matter what the situation is with respect to past reimbursements, the Examiner concludes that Niagara Mohawk's contention that the Commission, as a condition of retroactively imposing annual charges, must at least show that it has not fully recovered its administrative costs for the past period of the licenses, is wholly untenable.

Niagara Mohawk is also clearly in error in claiming that "Prior to actual license issuance there is no cost to the United States in having the Commission administer the statutory responsibilities incumbent on it by Part I of the Act." Under this approach, and contrary to the intent of the Act, the cost of dealing with the noncompliance problem and processing license applications up to the date of issuance of the licensing order would go unreimbursed.

Niagara Mohawk's delay in complying with the law cannot be said to have lightened the Commission's administrative burden or expense in administering Part I of the Act. Nor has it in any equitable sense entitled Niagara Mohawk to the relief it here seeks. It is common knowledge much of the Commission's administrative costs are attributable to the entire non-compliance problem, including Niagara Mohawk's projects.

Furthermore, Niagara Mohawk's argument that its projects have not occasioned administrative costs for the years 1949–1963, for which the amount of $174,259.05 was assessed under Section 10(e), ignores the fact that the Commission's formula for determining annual charges does not attempt to relate specific expenses to specific licensees. Instead, the total administrative expenses are apportioned each year among all licensees. The end result is that one licensee reimburses the Commission for expenses caused by other

licensees in a particular year. Over the long run, however, the variations should tend to balance out.

Niagara Mohawk calls attention to the fact that Section 10(e) directs that "in fixing such charges, the Commission shall seek to avoid increasing the price to the consumers of power by such charges." It says that the "Levy of retroactive charges for 16 or 24 years on a licensed project does not smack of such avoidance." While Niagara Mohawk is obligated to pay the annual charges even if they result in a rate increase, there is no apparent reason why a rate increase will occur. Niagara Mohawk is one of the largest utilities in the country. Accordingly, in view of its vast sales and revenues, it is wholly unreasonable to believe that the assessed charges, which by comparison with its total revenues are indeed minuscule in amount, could justify a rate increase. That is to say, Niagara Mohawk is unquestionably in a position to absorb the annual charges without increasing its rates.

Niagara Mohawk's Predecessor Was Unreasonable And Recalcitrant In Not Filing A Declaration Of Intention For Project 2424

Niagara Mohawk next contends that its predecessor in interest was excused from filing a declaration of intention for Project 2424 because this project is "the successor user at Lockport, New York, of water excepted from licensing by the Commission in a proceeding [Project 15] in 1926."

The Project 15 license authorized the diversion, for the purpose of producing hydroelectric power, of 275 cfs of water from the Niagara River through the New York State Barge Canal (formerly known as the Erie Canal) into Eighteen Mile Creek. Article 1 of that license, upon which Niagara Mohawk relies, is quoted in the margin.[10]

Apparently Project 2424, for which Niagara Mohawk has not accepted the license tendered by the Commission, uses waters under the Kennedy and Hatch lease referred to in Article 1. In Niagara Mohawk's view, this article recognizes that any project using such water does not require a license. In disagreeing with Niagara Mohawk's position, staff counsel points out, among other things, that if Niagara Mohawk construed the language of Article 1 to have the meaning now attributed to it "it is difficult to understand why Niagara Mohawk applied for a license for" Project 2424 in 1963. In other words, the filing of the application for license was, in effect, an admission that the company was fully aware of the fact that the Act required a license for this development.

---

[10] Article 1 of the Project 15 license reads as follows:

The authority to divert, carry, redivert and use the aforesaid 275 cubic feet per second, is limited to the place, amount, manner and agencies of diversion, carriage, rediversion and use described herein: *Provided,* however, that nothing contained herein shall be construed as affecting the rights of the said Hydraulic Race Company to use of the so-called "Surplus waters" of said Barge Canal to be taken and drawn from said canal at the head of the locks in the city of Lockport and to be discharged into the lower level of said canal, under the terms of a certain indenture between Richard Kennedy and Junius H. Hatch and the Canal Commissioners of the State of New York executed on January 25, 1826, and known as the "Kennedy and Hatch" lease, or any modifications thereof, or under other lease or agreement now existing or hereafter made with the State of New York respecting such surplus waters; and such surplus may be used either separately or in connection with the waters herein authorized to be diverted: *Provided, further,* that the carriage of the waters herein authorized to be diverted, or of any part thereof, and the time, place, amount and manner of the rediversion thereof from said Barge Canal, shall be wholly within the option of the State of New York, as expressed in the State permit, or in any renewal or amendment thereof, or otherwise; and that neither this license nor the authority granted hereunder shall be deemed to place any obligation whatsoever upon the State of New York with respect to the carriage or rediversion of said water.

Assuming, however, that the language of Article 1 purported to exempt the canal water from the Commission's licensing authority, that action can be of no help to Niagara Mohawk for the Supreme Court, in 1903, had declared the canal to be a navigable water of the United States (*The Robert W. Parsons*, 191 U.S. 17, 27) and the Commission could not ignore or attempt to override that decision. "When once found to be navigable, a waterway remains so," *United States* v. *Appalachian Electric Power Co.*, 311 U.S. 377, 408 (1940). Equally applicable in this situation is the holding in *United States* v. *City and County of San Francisco*, 310 U.S. 16, 31–32 (1940), for the Commission's licensing authority insofar as navigable waters are concerned has never been in doubt:

> A substantial part of the City's argument rests upon its claim that the Department of the Interior in the period from 1913 to 1937 construed § 6 to forbid no more than sale of power for resale. We are asked to accept these administrative interpretations. And in addition the City suggests that conduct of the Department, of which these interpretations were a part, is sufficient to create an estoppel against the Government. Whether the Department at any time ever did more than merely to tolerate sale and distribution of Hetch-Hetchy power by the Company as a temporary expedient is doubtful. Certain it is, however, that in 1935 the Secretary of the Interior declared the City's disposition of power through the Company to be a violation of § 6, demanded discontinuance of this violation without success and thereafter instigated this proceeding. We cannot accept the contention that administrative rulings—such as those here relied on—can thwart the plane purpose of a valid law. As to estoppel, it is enough to repeat that "* * * the United States is neither bound nor estopped by acts of its officers or agents in entering into an arrangement or agreement to do or cause to be done what the law does not sanction or permit" [Citing *Utah Power & Light Co.* v. *United States*, 243 U.S. 389, 409].

As put in *Securities and Exchange Commission* v. *Morgan, Lewis, and Bockius, et al.*, 209 F. 2d 44, 49, "the Commission may not waive the requirement of an act of Congress nor may the doctrine of estoppel be invoked against the Commission." Indeed the Commission recognized in *Androscoggin* that the applicant there involved could not rely upon "decisions rendered on the basis of the outmoded criteria of the 1920's" (27 FPC at 835–36). The Examiner should hasten to add, however, that the Supreme Court's 1903 determination of navigability in *The Robert W. Parsons* case does not constitute part of the "outmoded criteria" referred to by the Commission in *Androscoggin*.

In the circumstances, the Exmainer disagrees with the contention of counsel for Niagara Mohawk that the company's "predecessor was neither unreasonable or recalcitrant in not filing a declaration of intention." The Examiner's view coincides with the Commission's view in the *Central Maine* case, as to which the Court found that it could not "possibly condemn the Commission's determination that petitioner was unreasonable, if not even recalcitrant, in not recognizing and complying with the second portion of the statute by filing a declaration of intention."

License Issued To New York State Electric & Gas Corporation For Project 2438

Niagara Mohawk makes a forceful argument in contending that its Project 2424 is entitled at least to treatment, as respects administrative charges, equivalent to that accorded Project 2438 of New York State Electric & Gas Corporation (New York State Electric) the latter project being constructed

without a federal permit in 1915 and 1917 on what is now known as the New York State Barge Canal, the Supreme Court having declared the canal to be a navigable water of the United States in 1903. As has already been pointed out (*supra*, pp. 1314, 1315), Niagara Mohawk's Project 2424 is located on this same canal.

New York State Electric applied for a license for Project 2438 in 1964. The license for this project, issued on March 5, 1965, 33 FPC 413, was made effective from April 1, 1962, the first day of the month in which the Commission issued its *Androscoggin* decision establishing criteria for backdating licenses. Counsel for Niagara Mohawk contends that the—

> * * * lack of rationale in the Commission's demarcation in its *Androscoggin* opinion (1) between projects constructed prior to August 26, 1935 and (2) projects constructed post-1935 with a possible interpolation of a finding as to navigability at any time is illustrated most graphically by the contradictory action of the Commission in the issuance of licenses for [Niagara Mohawk's] Project 2424 and for [New York State Electric's] Project 2438. Each occupies portions of the New York State Barge Canal System. Project 2424 was built "in its present form" in 1941. Project 2438, consisting of two separate stations, was built in 1915 and 1917, respectively. The Commission would retroactively impose administrative charges on Project 2424 from July 1, 1941, but on Project 2438, only from April 1, 1962. This is patently unreasonable and arbitrary discrimination. If a license is required for each project, it was required with equal necessity both at and after June 10, 1920 or at and after August 26, 1935. * * *

In issuing the license for New York State Electric's Project 2438 the Commission stated that it was issuing it in "accordance with the criteria set forth in * * * [Androscoggin] * * *", and therefore "the license herein granted shall have an effective date of April 1, 1962 and a termination date of December 31, 1933." While the Examiner recognizes that he must give due deference to the Commission's conception of the scope of its *Androscoggin* criteria, the Examiner deems it not inappropriate in this instance to indicate for the Commission's reconsideration the fact that the situation it faced in licensing New York State Electric's project may have been different from what it thought it was. If an unwitting mistake was made the Commission may want to correct New York State Electric's license. In this connection the answer to Niagara Mohawk's position does not lie in changing the terms of the license for Project 2424 to coincide with those of New York State Electric's Project 2438, but in correcting the terms of the latter if they were granted through error.

For reasons now to be explained, it appears to the Examiner that the type of situation involved in New York State Electric's project is outside any category of unlicensed projects considered by the Commission in *Androscoggin*. In *Androscoggin* the Commission was primarily concerned with projects located on streams found to be navigable on the basis of their use for the transportation of logs, as to which the full extent of its jurisdiction had not always been understood. The Commission therefore properly drew a distinction between lawful and unlawful conduct in licensing pre-1935 and post-1935 projects (see *supra*, pp. 1307, 1308).

However, in view of the fact that the Supreme Court determined in 1903 that the New York State Barge canal was a navigable water of the United States, any construction of a project on that waterway after that date, without a federal authorization, can only be regarded as a knowing and wilful violation. That Supreme Court decision was as much, if not more, notice than the

amendment of Section 23(b) in 1935, that there could be no lawful construction of projects thereon without a federal permit.

The Examiner submits that for the Commission to retroactively impose administrative charges, etc., on New York State Electric's Project 2438 only from April 1, 1962, disregards the basis on which *Androscoggin* has set the pattern for governing lawful and unlawful conduct. The Examiner therefore recommends to the Commission that, through a show cause proceeding, the Commission retroactively impose administrative charges on that project from the date of the passage of the original Federal Water Power Act, *i.e.*, June 10, 1920. In this connection the Examiner calls attention to the decision *In the Matter of Foreman and Company, Inc.*, 3 SEC 132, 135, in which the Securities and Exchange Commission summarized the applicable law relating to wilful conduct:

> A finding of willfullness need not, of course, be predicated upon the express admission of a registrant that he purposely undertook an illegal course of action. Such a finding may properly rest upon inference drawn from all circumstances surrounding the registrant's conduct, and indeed, must so rest in most cases. *Cf. Pierce* v. *United States*, 252 U.S. 239 (1920); *Marrash* v. *United States*, 168 Fed. 225 (C.C.A. 2d, 1909); *Ryan* v. *United States*, 216 Fed. 13 (C.C.A. 7th, 1914); *Commonwealth* v. *Robinson*, 146 Mass. 571, 16 N.E. 452 (1882). Nor is it essential, in order to establish a willful violation within the meaning of Section 15(b), that the proof point to the registrant's having intentionally committed an unlawful act with a 'bad purpose.' While proof of these facts is clearly sufficient to establish 'willfulness' (see *United States* v. *Murdock*, 290 U.S. 389 (1933); *Potter* v. *United States*, 155 U.S. 438 (1894); *State* v. *Morgan*, 136 N.C. 628, 48 S.E. 670 (1904)), the term embraces a wider category of activities. 'Conduct marked by careless disregard of whether or not one has the right so to act' likewise may be deemed willful. (*United States* v. *Murdock, supra*, at p. 395; see also *Spurr* v. *United States*, 174 U.S. 728, 735 (1899); *Oregon-Washington R. & Nav. Co.* v. *United States*, 205 Fed. 337, 340 (C.C.A. 9th, 1913); *State* v. *Savre*, 129 Iowa 122, 105 N.W. 387 (1905)). * * *

In *United States* v. *Illinois Central Railroad Co.*, 303 U.S. 239, 244, the Court also pointed out that "whether respondent knowingly and willfully failed is to be determined by the acts and omissions which characterize its violation of the statute * * *." And in distinguishing between an act declared *malum prohibitum* and an act *malum in se*, the Court in *United States* v. *Union Pacific R. Co.*, 169 F. 65, 67, stated:

> * * * Counsel for defendant contend that the word 'willfully' as employed by the statute necessarily implies an evil purpose or bad motive, and have in their brief collected and reviewed many cases dealing with the meaning of this word. We find no occasion, however, to follow them through this maze of authority. The word is here employed in connection, not with a crime or offense malum in se, but with an offense purely statutory subjecting the offender to a civil action only. In view of our former rulings on this question, we are of the opinion and so hold that as here employed the word means only the intentional doing of an act forbidden by the statute.

FINDING AND CONCLUSION

Upon consideration of the record made in this proceeding it is found and concluded that Niagara Mohawk's contentions do not warrant any modification of (1) the Commission's orders issuing licenses for Projects 2318, 2320, 2330 and 2424, or (2) the amount of $174,259.05 heretofore billed Niagara Mohawk

for annual charges for administration for the periods April 1, 1949–December 31, 1963 (for Project 2318) and November 1, 1949–December 31, 1963 (for Projects 2320 and 2330), the beginning dates for such charges being the retroactive effective dates of the licenses. This is to say, since "there is warrant in the record for the judgment [heretofore exercised by the Commission], it must stand" (*Rochester Telephone Co.* v. *United States*, 307 U.S. 125, 145–46).

ORDER

WHEREFORE, *it is ordered*, subject to review by the Commission:

Within fifteen days after this order becomes the final act of the Commission, Niagara Mohawk shall (1) pay the annual charges assessed in the total amount of $174,259.05, plus interest at the rate of 6 percent "from the dates of the statements of annual charges" as required by the Commission's order issued May 17, 1965, 33 FPC 1025, and (2) accept and return to the Commission the license issued on December 9, 1964, 32 FPC 1404, for Project 2424.

FRANCIS L. HALL,
Presiding Examiner.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

NORTHERN NATURAL GAS COMPANY, DOCKET NO. CP66–44

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued November 15, 1965)

On August 9, 1965, Northern Natural Gas Company (Applicant) filed in Docket No. CP66–44 an application, as supplemented on September 22, 1965, pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of additional horsepower at two existing compressor stations, as more fully set forth in the application.

Applicant will install 2,000 additional horsepower at its Holcomb Station located in Finney County and 3,000 additional horsepower at its Hugoton Station in Stevens County, both located in the Hugoton Field, Kansas.

Applicant states that the additional horsepower is required for the following reasons: (1) to offset the declining wellhead flowing pressures behind both stations due to diminuation of reservoir pressure which has historically averaged approximately 7 psi per year, (2) to enable Applicant to purchase its gas requirements from the field consistent with the allowable assigned or the provisions in its gas purchase contracts, and (3) to allow for a geographic shift in the allowables assigned to the wells connected to Applicant's system from the northern portion of the Hugoton Field to the southern portion.

Applicant further states that the 3,000 horsepower proposed at the Hugoton Station will be utilized as the second stage of compression for gas going north to Holcomb Station and that it consists of portable units which can be transferred readily in a minimum of time and cost. The 2,000 horsepower addition proposed at the Holcomb Station will be utilized to compress gas from Hugoton-Tate line.

The estimated cost of the additional facilities is $1,604,400, which will be financed from cash on hand. The incremental cost of service is $270,750, which is 0.14 percent of Applicant's total operating expenses of $196,133,085 for the year ended December 31, 1964. The proposed construction appears to be economically feasible.

Due notice of the filing of the application was published in the Federal Register on August 18, 1965 (30 F.R. 10258). No protest, petition to intervene, or notice of intervention has been filed in this proceeding.

At a hearing held on November 10, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Northern Natural Gas Company, a Delaware corporation having its principal place of business in Omaha, Nebraska, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order issued on April 6, 1943, in Docket No. G–280 (3 FPC 967).

(2) The facilities hereinbefore described and as more fully described in the application in this proceeding are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (b), (c)(1), (c)(3), (c)(4), and (e) of Section 157.20 of said Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to Applicant, Northern Natural Gas Company, authorizing the construction and operation of the facilities, as hereinbefore described and as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (b), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities authorized shall be completed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within one year from the date of this order.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

UNITED GAS PIPE LINE COMPANY, DOCKET NO. CP65-119

ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued November 15, 1965)

On September 29, 1965, United Gas Pipe Line Company (Petitioner) filed in Docket No. CP65-119 a petition to amend the Commission's order issued January 5, 1965, 33 FPC 21, in said docket to authorize a total expenditure of $2,000,000 during the calendar year 1965 in lieu of the $1,000,000 authorized to be expended during said calendar year, all as more fully set forth in the petition to amend in this proceeding.

The order of January 5, 1965, authorized Petitioner, pursuant to its "budget-type" application, during the three years commencing January 1, 1965, to construct and operate natural gas pipeline facilities and compression facilities for the testing and development of under ground reservoirs for the storage of natural gas located near the route of Applicant's pipeline system. In accordance with the provisions of Subparagraph (4)(i) of Section 157.7(d) of the Commission's Regulations under the Natural Gas Act, total expenditures for any one year were limited to $1,000,000 with a $3,000,000 limitation for the entire three year period.

Petitioner states herein that it has been actively engaged in making studies and acquiring rights and options in connection with a proposed underground storage project to be known as the Bistineau Gas Storage Field, Bossier and Bienville Parishes, Louisiana. Petitioner states further that numerous options which have been obtained must be exercised prior to January 1, 1966, and it appears that in the exercise of such options the amount of money expended under its present authorization would exceed the sum of $1,000,000 for the calendar year 1965. Petitioner believes that it would be in the public interest to exercise these options and not be faced with renegotiations for such rights with the present owners of such options expired.

Accordingly, Petitioner requests that the order of January 5, 1965, be amended to authorize a total expenditure of $2,000,000 during the calendar year 1965.

Due notice of the filing of the petition to amend and opportunity for hearing thereon has been given by publication in the Federal Register on October 13, 1965 (30 F.R. 13029). No protest or petition to intervene has been filed in this proceeding.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order issued January 5, 1965, in Docket No. CP65-119 be amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order issued January 5, 1965, in Docket No. CP65-119 is amended to authorize Petitioner to expend a total of $2,000,000 during the calendar year 1965 in lieu of the $1,000,000 heretofore authorized to be expended during said calendar year, all as hereinbefore described and as set forth in the petition to amend.

(B) The condition limiting total expenditures during the three calendar years to $3,000,000 shall remain unchanged.

(C) In all other respects said order shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

WISCONSIN MICHIGAN POWER COMPANY, PROJECT NO. 2394

ORDER ISSUING LICENSE (MAJOR)

(Issued November 15, 1965)

Application was filed on August 12, 1963 and supplemented on January 14 and February 5, 1965 by Wisconsin Michigan Power Company (Applicant) of Appleton, Wisconsin, for a license under Section 4(e) of the Federal Power Act (Act) for constructed major Project No. 2394, known as the Chalk Hill Project, located on the Menominee River in Menominee County, Michigan, and Marinette County, Wisconsin, in the vicinity of Amberg, Wisconsin, and the Village of Stephenson, Michigan.

The Chalk Hill Project was constructed in 1926 and commenced operation in 1927. The project has been operating since the latter date without any substantial changes. Applicant acquired the project works in 1937.

The Menominee River, on which Applicant's Chalk Hill project is located, was held to be a navigable river of the United States by this Commission on July 27, 1943,[1] in an opinion on a declaration of intention filed by the Applicant with respect to certain hydroelectric developments now licensed as Project No. 1759.[2] Thus, the Chalk Hill project is on a stream within the Commission's jurisdiction. Unlike Applicant's White Rapids project[3] (now designated as Project No. 2357) the Chalk Hill project was never the subject of a previously filed application for preliminary permit in which the Commission declined to take jurisdiction. Thus, any doubt that may have existed before 1943 about the need for a Federal license for the Chalk Hill project ceased to exist after that date, when this Commission held the Menominee navigable.

Under these circumstances, Applicant's contention that it is entitled to a 50-year license effective as of the date of issuance is without merit. Instead, we think that it is proper to make the license effective as of July 1, 1943 (the first day of the month in which the Menominee was declared to be navigable) with a termination date of June 30, 1933. In so stating we are merely follow-

---

[1] *In the Matter of Wisconsin Michigan Power Company*, 3 FPC 449 (1943). This opinion was one of the first to hold that evidence of log-driving and rafting on a stream could be sufficient to support a finding that the stream was navigable. This and several other similar opinions were cited and relied upon in the Commission's opinion in *Public Service Company of New Hampshire (Androscoggin)*, 27 FPC 830 (1962) which is discussed below.

[2] All parts of Project No. 1759 are located upstream from the Chalk Hill project, on the upper reaches of the Menominee and upon its tributary the Michigamme River.

[3] Application for a preliminary permit for the White Rapids project was filed by Applicant's predecessor in interest, the White Rapids Paper Company, in April 1922. The project was initially designated Project No. 302. The Commission elected to treat the application as a Declaration of Intention under Section 23 and declined to take jurisdiction. Second Annual Report of the Federal Power Commission, p. 151.

Pursuant to an application filed April 8, 1963, a license has been issued for the White Rapids project, Project No. 2357, by order dated March 10, 1965, 33 FPC 526. That license is effective as of January 1, 1965 and will terminate on December 31, 1993.

ing the policy enunciated in *Public Service Company of New Hampshire (Androscoggin)* 27 FPC 830 (1962). In that case, after noting that the Androscoggin River on which the constructed project was located had been declared navigable by this Commission in an order issued July 24, 1958, 20 FPC 99, we declared that:

> Our discretion * * * should not be so exercised as to ignore either of the two more flagrant breaches of statutory duty committed by Applicant in 1958 when it (a) failed to apply for a license even after our determination of jurisdiction over the Androscoggin in Docket No. E-6807; and (b) replaced its dam without filing either a license application or a declaration of intention * * * Since the Application now before us does not indicate the precise date upon which the construction was commenced, we are content to make the license effective as of July 1, 1958, the first day of the month in which we determined jurisdiction in Docket No. E-6807 (27 FPC 830, 834).

Application of this line of reasoning leads us to choose July 1, 1943 as the date on which the license for the Chalk Hill project should be deemed effective. After our July 27, 1943 decision finding the Menominee River navigable, the Applicant's duty to apply for a license for the Chalk Hill project was clear and unmistakable.

Similar reasoning prompts us to choose June 30, 1993 as an appropriate termination date for this license. In *Androscoggin* we cited, our July 27, 1943 decision regarding the navigability of the Menominee River and similar decisions, and said:

> At least as early as the 1943 decisions, the owner of every project located in a stream capable of being used for the transportation of logs was placed on notice of the perils of further unlicensed operation. * * * For the reasons stated, it is in our view appropriate that the license tendered herein be for a term ending December 31, 1993. (27 FPC 830, 833–34).

The Secretary of the Army and the Chief of Engineers have reported that the plans of the project structures affecting navigation have been approved pursuant to Section 4(e) of the Federal Power Act insofar as the interests of navigation are concerned.

The Department of the Interior, in reporting on the application, recommended for inclusion in any license for the project, conditions in the interests of fish and wildlife and recreation, as set forth in attached Form L-3.

The Department of Health, Education, and Welfare, has advised that the project does not significantly affect water supply or water quality control and the Department does not expect that the granting of a license will increase or intensify vector problems.

The Public Service Commission of Wisconsin has advised that the project dam was authorized by permit issued in 1926 under Wisconsin law.

Applicant filed a revised Exhibit R (3) showing the present recreational and public access areas developed within the project boundary, which, to this extent, we are herein approving. However, by Article 33 herein, we are requiring Applicant to cooperate with State and local agencies in the interest of recreation in connection with the use of project lands and waters by the public, and requiring Applicant to file within two years of the date of issuance of this license a revised Exhibit R to show the planned development of additional recreational facilities as project works.

Since the application for license included only a 10,000 kva capacity substation and appurtenant facilities and 2.32 miles of 138 kv transmission line as parts of the project works but does not include other transmission facili-

ties associated with the project, we are reserving in Article 32 herein the Commission's right to determine at a later date what additional transmission facilities, if any, shall be included in this license as parts of the project works.

The Commission finds:

(1) The project affects navigable waters of the United States.

(2) Applicant is a corporation organized under the laws of the State of Wisconsin, and has submitted satisfactory evidence of compliance with the requirements of all applicable State laws insofar as necessary to effectuate the purposes of a license for the project.

(3) Public notice of the filing of the applicaton has been given. No protests or petitions to intervene have been received. No conflicting application is before the Commission.

(4) The project does not affect a Government dam, nor will the issuance of a license therefor, as hereinafter provided, affect the development of any water resources for public purposes which should be undertaken by the United States.

(5) Subject to the terms and conditions hereinafter imposed, the project will be best adapted to a comprehensive plan for improving or developing a waterway or waterways for the use or benefit of interstate or foreign commerce, for the improvement and utilization of water-power development, and for other beneficial public uses, including recreational purposes.

(6) The installed horsepower capacity of the project hereinafter authorized for the purpose of computing the capacity component of the administrative annual charge is 10,400 horsepower, and the amount of annual charges, based on such capacity, to be paid under the license for the project, for the costs of administration of Part I of the Act is reasonable.

(7) The exhibits designated and described in paragraph (B) below conform to the Commission's rules and regulations and should be approved as part of this license, except that Exhibit K (FPC No. 2394–2) may be subject to revision, as provided in Article 31 herein.

(8) Exhibit R (3) Sheet 1 (FPC No. 2394–15) Recreational Area, conforms to the Commission's rules and regulations and should be approved as a part of this license insofar as it indicates present recreational use.

The Commission orders:

(A) This license is hereby issued to Wisconsin Michigan Power Company (Licensee) of Appleton, Wisconsin, under Section 4(e) of the Federal Power Act (Act) for a period effective as of July 1, 1943, and terminating June 30, 1993, for the continued operation and maintenance of Chalk Hill Project No. 2394, located on the Menominee River, a navigable water of the United States, subject to the terms and conditions of the Act, which is incorporated herein by reference as a part of this license, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) Chalk Hill Project No. 2394 consists of:

(i) all lands constituting the project area and enclosed by the project boundary or the limits of which are otherwise defined, and/or interest in such lands necessary or appropriate for the purposes of the project, whether such lands or interest therein are owned or held by the Licensee or by the United States; such project area and project boundary being more specifically shown and described by the following exhibits which formed a part of the application for license:

Exhibit J: Sheet 1 (FPC No. 2394–1) General Map Showing the Entire Project Area

Exhibit K: Sheet 1 (FPC No. 2394–2) Detail Map Covering Project Area and Showing Project Boundary

(ii) project works consisting of: (1) a dam comprised of a concrete gravity and earth embankment section about 38 feet high with an overall length of 1,936 feet containing an intake section 123 feet long, a gated spillway 300 feet long including eleven tainter gates 12 feet high and 24 feet wide, an earth embankment section 140 feet long located west of the powerhouse on the Michigan shore and an earth embankment section about 1,373 feet long located east of the spillway section; (2) a reservoir of about 882 acres at a normal water surface elevation of 745 feet; (3) a powerhouse integral with the dam containing three turbines each rated 3,750 hp at a head of 28-feet directly connected to three generators each rated 2,600 kw; (4) an operator's village; (5) one 10,000 kva capacity substation; (6) a 138-kv transmission line about 2.32 miles long; and (7) appurtenant electrical and mechanical facilities. Location and character of the works are shown in the above-cited exhibits and others designated as follows:

Exhibit L: Sheet 1 (FPC No. 2394–3) General Layout, Sheet 2 (FPC No. 2394–12) Cross Section of Plant, Sheet 3 (FPC No. 2394–5) Foundation Boring Exploration, Sheet 4 (FPC No. 2394–13) Plant Floor Sectional Plans, Sheet 5 (FPC No. 2394–14) Plant Elevations Sheet 6 (FPC No. 2394–8) Tainter Gate & Spillway Details, Sheet 7 (FPC No. 2394–9) Abutment Walls, Sheet 8 (FPC No. 2394–10) Additional Data; and

Exhibit M: Three typewritten pages, "General Description of Project and Equipment", filed in the Commission August 12, 1963.

(iii) all other structures, fixtures, equipment or facilities used or useful in the maintenance and operation of the project and located on the project area, including such portable property as may be used or useful in connection with the project or any part thereof, whether located on or off the project area, if and to the extent that the inclusion of such property as part of the project is approved or acquiesced in by the Commission; also, all riparian or other rights, the use or possession of which is necessary or appropriate in the maintenance or operation of the project.

(C) This license is also subject to the terms and conditions set forth in Form L–3 (Revised August 1, 1964), entitled "Terms and Conditions of License for Constructed Project Affecting Navigable Waters of the United States" (32 FPC 1114), which terms and conditions, designated as Articles 1 through 29, are attached hereto and made a part hereof, except Article 25 thereof, and subject to the following special conditions set forth herein as additional articles:

Article 30. The Licensee shall pay to the United States the following annual charge, effective as of July 1, 1943:

For the purpose of reimbursing the United States for the costs of administration of Part I of the Act, a reasonable annual charge as determined by the Commission in accordance with the provisions of its regulations, in effect from time to time. The authorized installed capacity for such purposes is 10,400 horsepower.

Article 31. The Licensee shall, upon a determination of United States ownership of unsurveyed islands by the Department of the Interior, file with the Commission an amended Exhibit K (FPC No. 2394–2) to include such islands under this license.

Article 32. The Commission reserves the right to determine at a later date what additional transmission facilities, if any, shall be included in this license as part of the project works.

Article 33. The Licensee shall cooperate with State and local agencies in the development and maintenance of access areas and roads, sanitary and waste disposal facilities, and such other facilities as may be necessary for full recreational utilization by the public of project lands and waters consistent with the terms of the license and the operation of the project, and shall within two years of the date of issuance of this license file for Commission approval a revised Exhibit R in conformance with the requirements of Section 4.41 R of the Regulations under the Federal Power Act.

Article 34. On the application of any person, association, corporation, Federal agency, State or municipality, the Licensee shall, after notice and opportunity for hearing, permit such reasonable use of its reservoirs or other project works or parts thereof as may be ordered by the Commission in the interest of comprehensive development of the waterway or waterways involved and the conservation and utilization of water resources of the region for water supply for steam electric, irrigation, industrial, municipal or similar purposes, consistent with the primary objective of the project. The Licensee shall receive such reasonable compensation as may be appropriate for use of its reservoirs or other project works or parts thereof for such purposes, any such compensation to be fixed either by Commission approval of an agreement between the Licensee and the party or parties benefiting or by the Commission in the event the parties are unable to agree. Applications shall contain information in sufficient detail to afford a full understanding of the proposed use, including satisfactory evidence that the applicant possesses necessary water rights pursuant to applicable State law, or a showing of cause why such evidence cannot be submitted, as a statement as to the relationship of the proposed use to any State or municipal plans or orders which may have been adopted with respect to the use of such waters.

(D) The Commission reserves the right to determine at a later date the annual charge, for the use, occupancy and enjoyment of lands of the United States, if any, by the project.

(E) The exhibits designated and described in paragraph (B) above are hereby approved as part of this license.

(F) The revised Exhibit R (3) designated in finding (8) above is hereby approved as a part of this license to the extent indicated in the finding.

(G) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license. In acknowledgment of the acceptance of this license, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

ATLANTA GAS LIGHT COMPANY AND SOUTH GEORGIA NATURAL GAS COMPANY, DOCKET NO. CP66-84

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued November 16, 1965)

On September 27, 1965, Atlanta Gas Light Company (Applicant) filed in Docket No. CP66-84 an application pursuant to Section 7(a) of the Natural

Gas Act for an order of the Commission directing South Georgia Natural Gas Company (Respondent) to establish physical connection of its natural gas transmission facilities with the distribution facilities to be installed by Applicant and to sell and deliver to Applicant an additional 681 Mcf of natural gas per day for resale and distribution in the City of Hahira, Georgia, and its environs, as more fully set forth in the application.

Applicant proposes that Respondent construct a tap, meter and regulating station on its 4-inch Nashville lateral southeast of Hahira. Applicant's distribution system will be connected at that point.

Hahira is located approximately seven miles north of Valdosta, Georgia, Applicant's existing distribution system, serving Valdosta, is presently connected to Respondent's transmission system.

The total estimated volumes of natural gas necessary to meet Applicant's annual and peak day requirements for the initial three year period of proposed operations are stated to be as follows:

	First year	Second year	Third year
Annual (Mcf)	27,075	34,494	40,020
Peak day (Mcf)	511	618	681

The estimated cost of construction of Applicant's distribution system is $99,491, which will be financed from current construction funds. The third year anticipated net income from the project is $5,561 (after income taxes), resulting in a 6.16 percent incremental rate of return. The proposal appears to be economically feasible.

Applicant's proposed distribution project to serve the City of Hahira was approved by the Georgia Public Service Commission on December 2, 1964.

Respondent filed an answer to the application on September 29, 1965, stating that, in its opinion, the proposal will not impair its ability to render adequate service to its other customers and will place no undue burden upon it. Respondent has no objection to the proposal.

Due notice of the filing of the application and opportunity for hearing thereon was published in the Federal Register on October 14, 1965 (30 F.R. 13105). No protest, petition to intervene or notice of intervention has been filed.

The Commission finds:

(1) South Georgia Natural Gas Company, a Georgia corporation having its principal place of business in Thomasville, Georgia, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of August 3, 1954, in Docket No. G-1915 (13 FPC 666).

(2) Applicant is a public utility company in the State of Georgia and is authorized to construct and operate facilities to distribute and sell natural gas to inhabitants of the communities along its system.

(3) It is necessary and desirable in the public interest that Respondent be directed to establish a physical connection of its transportation facilities with the facilities proposed to be constructed by Applicant and to render natural gas service to Applicant, as hereinbefore described and as more fully set forth in the application, as hereinafter ordered and conditioned.

(4) The requirement that Respondent serve Applicant, as requested, will not place an undue burden upon Respondent nor impair its ability to render adequate service to existing customers.

The Commission orders:

(A) Respondent is directed to establish a physical connection of its natural gas transmission system with the facilities to be constructed by Applicant and to sell and deliver natural gas to Applicant for resale and distribution within the City of Hahira, Georgia, and its environs all as hereinbefore described and as more fully described in the application.

(B) Applicant shall be prepared to receive natural gas from Respondent at the proposed new connection within one year from the date of this order.

(C) Respondent shall notify the Commission of the commencement of service within 10 days thereof.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

MIDWESTERN GAS TRANSMISSION COMPANY, DOCKET NOS. RP61–19, RP62–7; NATURAL GAS PIPELINE COMPANY OF AMERICA, RP63–6

ORDER DENYING REHEARING

(Issued November 16, 1965)

On October 25, 1965, Fuels Research Council, Inc., National Coal Association, Mid-West Coal Producers Institute, Inc., and United Mine Workers of America (Coal Interests), interveners in the above-captioned proceeding, filed a joint application for rehearing of the Commission's Opinion No. 477 and order issued September 28, 1965, 34 FPC 973. In Opinion No. 477 we determined that, subject to certain conditions not material herein, the existing rates of Midwestern Gas Transmission Company (Midwestern) and Natural Gas Pipeline Company of America (Natural) were just and reasonable and not unduly discriminatory or preferential.

The Coal Interests base their request for rehearing on numerous grounds. They contend that the Commission erred in determining that the rate designs are just and reasonable under Sections 4 and 5 of the Natural Gas Act. They also argue that the Commission erred in failing to find that the present rate designs of Midwestern and Natural subject the Coal Interests and their members to undue prejudice or disadvantage.

The arguments are similar to those previously advanced by the Coal Interests in their briefs before the Examiner. All points raised in the application have been discussed and were disposed of in our opinion and order. No further discussion is necessary.

The Commission finds:

The assignments of error and grounds for rehearing set forth in the application for rehearing filed by the Coal Interests in this proceeding present no facts or legal principles which would warrant any change or modification in the Commission's Opinion No. 477 and accompanying order.

The Commission orders:

The application for rehearing filed by Fuels Research Council, Inc., National Coal Association, Mid-West Coal Producers Institute, Inc. and United Mine Workers of America on October 25, 1965, is denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

THE MONTANA POWER COMPANY, PROJECT NO. 2301

ORDER APPROVING REVISED PROJECT EXHIBIT AND FIXING ANNUAL LAND CHARGE

(Issued November 16, 1965)

On August 9, 1965, The Montana Power Company, licensee for Project No. 2301, filed for Commission approval revised Exhibit K: (FPC No. 2301–13), pursuant to Article 28 of the license, which was issued for a period effective as of December 1, 1961.

Project No. 2301, known as the Mystic Lake Hydroelectric Development, is situated on Mystic Lake and West Rosebud Creek in Stillwater County, Montana, and affects lands of the United States within the Custer National Forest. The revised exhibit shows the project boundary around Mystic Lake Reservoir and the project area within the National Forest as comprising 517.43 acres.

The Chief, Forest Service, acting for the Secretary of Agriculture, who has supervision over Custer National Forest, has advised that the project boundary shown on the revised exhibit will not interfere or be inconsistent with the purposes for which Custer National Forest was created or acquired.

The Commission finds:

(1) Revised Exhibit K: (FPC No. 2301–13) conforms to the Commission's rules and regulations and should be approved as part of the license for the project, and Exhibit K: (FPC No. 2301–3), now part of the license and which has been superseded, should be eliminated from the license.

(2) The amount of annual charges under the license for recompensing the United States for the use, occupancy and enjoyment of its lands by the project is reasonable as hereinafter fixed and specified.

The Commission orders:

(A) The revised Exhibit K described in finding (1) above is hereby approved as part of the license for Project No. 2301, and the exhibit described in the same finding as being superseded is hereby eliminated from the license for the project.

(B) Subparagraph (b) of Article 24 of the license for the project is hereby revised to read as follows:

> (b) For the purpose of recompensing the United States for the use, occupancy and enjoyment of its lands, exclusive of those used for transmission line right-of-way, $1,241.83, effective as of December 1, 1961; and

(C) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this order. In acknowledgment of the acceptance of this order, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

SOUTHERN CALIFORNIA EDISON COMPANY, PROJECT NO. 372

ORDER APPROVING REVISED PROJECT EXHIBITS J AND K

(Issued November 16, 1965)

Southern California Edison Company, licensee for major Project No. 372, located on the Middle Fork of the Tule River in Tulare County, California, affecting lands of the United States within Sequoia National Forest, filed on June 28, 1965, an application for approval of revised Exhibit J and K maps to indicate certain changes in the location of transmission line rights-of-way.

According to the application, the two lines involved, known as the Tule River Transmission and Telephone Lines, have been rerouted in Sections 13 and 14, T. 21 S., R. 28 E., and in Section 18, T. 21 S., R. 29 E., M.D.B. & M., to accommodate the construction by the U.S. Corps of Engineers of its Success Reservoir, and the revised Exhibits J and K maps show the relocations. The relocated lines are primary lines. The changes in the location of the rights-of-way will not affect lands of the United States.

The Commission finds:

(1) The following described revised exhibits conform to the Commission's rules and regulations and should be approved as part of the license for the project:

Exhibit J: (FPC No. 372–50) entitled "General Map of Tule Project—Southern California Edison Company" signed by Robert N. Coe, Vice President for Southern California Edison Company on June 21, 1965.

Exhibit K: (FPC No. 372–51) entitled "Detail Map of Tule Project of the Southern California Edison Company LTD." signed by Robert N. Coe, Vice President for Southern California Edison Company on June 21, 1965.

Exhibit K: (FPC No. 372–52) entitled "Detail Map of Tule Project of the Southern California Edison Company" signed by Robert N. Coe, Vice President for Southern California Edison Company on June 21, 1965.

(2) The following described exhibits, now part of the license and which have been superseded, should be eliminated from the license for the project:

Exhibit K: (FPC No. 372–25) entitled: "Detail Map of Tule Project of the Southern California Edison Company LTD.", and approved by the Commission on April 15, 1941.

Exhibit K: (FPC No. 372–41) entitled: "Detail Map of Tule Project of the Southern California Edison Company" approved by the Commission on June 1, 1949.

Exhibit J: (FPC No. 372–46) entitled: "General Map of Tule Project—Southern California Edison Company" approved by the Commission on February 13, 1962.

The Commission orders:

The revised exhibits described in finding (1) above are hereby approved as part of the license for Project No. 372, and the superseded exhibits described in finding (2) above are hereby eliminated from the license for the project.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

H. L. HAWKINS & H. L. HAWKINS, JR., OPERATOR, ET AL., DOCKET NO. G–18077, ET AL.*

ORDER DENYING REHEARING AND GRANTING STAY

(Issued November 17, 1965)

The Hunt Interests[1] on October 15, 1965, W. S. Kilroy (Operator), *et al.* and Kilroy Properties Incorporated (Kilroy) on October 18, 1965, Sun Oil Company and Shell Oil Company on October 21, 1965, and Skelly Oil Company, The Superior Oil Company, Callery Properties, Inc. and the Public Service Commission of the State of New York on October 22, 1965, have filed applications under Section 19 of the Natural Gas Act for rehearing of our Opinion No. 475 and order issued September 22, 1965, 34 FPC 897, in these proceedings. Motions for stay have been filed by Callery, Superior and Hunt.

In Opinion No. 475 and order we granted permanent certificates of public convenience and necessity under Section 7 of the Natural Gas Act to a number of producers in Texas Railroad District No. 3, conditioned on a price of 16.0 cents per Mcf at 14.65 psia for the producers whose contracts were made before issuance of the Commission's Statement of General Policy No. 61–1 on September 28, 1960 (24 FPC 818) and 17.0 cents per Mcf at 14.65 psia for the producers whose contracts were dated after the issuance of the Policy Statement. Little more need be said about the basic problem of the proper initial rate, but further comments and corrections are appropriate with respect to some of the subsidiary issues.

Several of the producers point out that their initial rates for the sales here in question have been superseded by later, increased rate filings which have gone into effect under suspension and argue that the requirement in paragraph (D) of our order that they file rate schedule supplements reflecting the conditioned price is contrary to the Natural Gas Act and the Commission's orders in the other proceedings permitting the increased rates to go into effect. On the contrary we think that supplemental rate schedule filings should be made by all producers whose initial rates exceed the levels found proper here in order to establish the appropriate filed initial rate for each producer. Where no superseding rates have become effective the producers will commence charging the initial rates prescribed here from the date of filing the rates prescribed here. Where superseding rates have been permitted to go into effect, the producers will continue to charge the superseding rates.

In the case of such producers having no express refund provisions in their temporary certificates, the question of whether there should be refunds for the period prior to their putting their superseding rates into effect will be determined upon completion of the proceeding contemplated by paragraph (I) of Opinion No. 475. As for Superior in Docket No. CI63–584 and Pan American in Docket No. CI63–1445, which do have refund provisions in their certificates but have not filed superseding rates, the refund period would extend from the date service commenced until the date the rates prescribed here are filed. Paragraphs (D) and (E) will be amended to clarify these points.

---

* For additional parties see Opinion No. 475 and order issued September 22, 1965, 34 FPC 897.

[1] H. L. Hunt, Operator, *et al.*, H. L. Hunt, Hassie Hunt Trust, Operator, *et al.*, Caroline Hunt Sands, Caroline Hunt Trust Estate, Lamar Hunt Trust Estate, Nelson Bunker Hunt, Placid Oil Company, Operator, *et al.*

The producers also contend that the 19-cent moratorium level is not supported by the record. The 19 cents was originally determined in our order of February 24, 1964 (*Hassie Hunt Trust, Operator, et al.*, 31 FPC 447) as the lowest of the three highest prices in the area, because price redetermination clauses customarily provide for the rate to be redetermined on the basis of the highest prices to three different purchasers in a given area. See *Hassie Hunt Trust, Operator, et al.*, 31 FPC 946, 947. We believe the moratorium line should not have to be readjusted upward with each proceeding, for otherwise producers would be subject to varying moratorium levels within the same periods, and the moratorium would afford little protection to the public.

Sun makes the point that in its Docket No. G–8288, *et al.*, 32 FPC 894, we approved a settlement providing for a moratorium period until August 1, 1967 for increased rate filings including the Sun rate schedule involved in this proceeding. We shall amend the moratorium period with respect to Sun to conform to the settlement.

Several producers have asked for stays of paragraphs (B) through (I) of our previous order until completion of judicial review or alternatively until after the decision of the Supreme Court in *U.G.I., et al.* v. *Callery Properties, Inc., et al.*, S. Ct. October Term 1964, Nos. 21, *et al.** Paragraph (B) conditions the certificate with respect to price; (C) provides the moratorium; (D) provides for filing new rates; (E) through (H) provide for refunds by Superior and Pan American and the escrow procedure; and (I) provides for deferring the question of refunds where there is no refund condition in the temporary certificates. In our opinion stay of paragraph (B), the rate condition, is unnecessary. Stay of paragraph (C), the moratorium, would defeat the purpose for which it is included. Paragraph (D), rate filings, should be stayed pending judicial review. Paragraphs (E) through (H), relating to refunds, need not be stayed because the amounts to be refunded will not be paid over until further order of the Commission. In view of the pending proceedings in *U.G.I.* v. *Callery, supra*, paragraph (I) should be stayed until after the Supreme Court decision. Those who have already made filings in accordance with paragraph (I) will be given opportunity to supplement them when paragraph (I) becomes effective.

The Commission further finds:

The assignments of error and grounds for rehearing set forth in the applications for rehearing filed in this proceeding present no fact or legal principles which would warrant any change or modification in the Commission's Opinion No. 475 and order except as specified below.

The Commission orders:

(A) The applications for rehearing filed by the Hunt Interests, Kilroy, Sun, Shell, Skelly, Superior, Callery and the Public Service Commission of the State of New York are denied.

(B) Paragraph (C) is amended to read as follows:

Each certificate issued in paragraph (A), is further conditioned to provide for a moratorium on the filing of all price increases in excess of 19 cents per Mcf at 14.65 psia, inclusive of tax reimbursement until January 1, 1968, or until issuance of a final decision in Docket No. AR64–2, whichever is earlier, but in the case of Sun Oil Company, Docket No. CI60–348, the moratorium imposed by the agreement in Docket No. G–8288 shall apply.

(C) Paragraph (D) is amended to read as follows:

Within 60 days from the date of issuance of this order each of the applicants receiving certificates in paragraph (A) hereof, whose proposed total

*380 U.S. 931 (1965).

initial price exceeds the limits set forth in paragraph (B) shall file a supplement to its presently filed rate schedule, related to its respective application, reflecting the conditioned price as the total initial price in lieu of the higher initial price provided in the contract. The filings of Superior Oil Company in Docket No. CI63-584 and Pan American Petroleum Corporation in Docket No. CI63-1445 shall be effective from the date delivery began until lawfully changed in the manner provided by the Natural Gas Act. The filings of all other producers shall set forth the initial rate here prescribed, and shall be effective from the date of this order until lawfully changed in the manner provided by the Natural Gas Act, and subject to any such lawful changes which are the subject of other proceedings before the Commission. In making the required filings, applicants need not comply with the detailed submittal provisions of Section 154.94(f) of the Regulations under the Gas Act.

(D) In the second sentence of Paragraph (E) change "until the date of this order." to "until the rates prescribed by paragraph (D) are effective. In the fourth sentence of Paragraph (E) after "the date of this order" add "for the period before the date of this order." Add the following sentence to Paragraph (E): "Within 90 days after judicial affirmance of Opinion No. 475, Superior and Pan American shall submit a supplemental report applicable to the excess charges collected between the date of issuance of Opinion No. 475 and the effective date of the reduced rate filings, with interest computed at the rate of 7 percent per annum to the date of such rate filings."

(E) The date for making the filings required by paragraph (D) is postponed until 60 days after judicial review of Opinion No. 475 and order becomes final. The time limit for filing initial briefs and statements of evidence as provided in paragraph (I) is stayed until 60 days after the decision of the United States Supreme Court in *U.G.I.* v. *Callery, supra*, becomes final. Those who have already filed such briefs or statements may file supplemental briefs and statements within the extended time limit prescribed here.

(F) In all other respects the motions for stay are denied.

Commissioners Black and Ross *dissenting* for the reasons set forth in the dissenting statement accompanying Opinion No. 475 and order issued September 22, 1965, 34 FPC at p. 909.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

AREA RATE PROCEEDING, ET AL. (SOUTHERN LOUISIANA AREA), DOCKET NO. AR61-2, ET AL.

ORDER DENYING MOTION TO OMIT INTERMEDIATE DECISION, AND ALTERNATIVE REQUEST FOR AN INTERIM ORDER, BUT GRANTING OTHER RELIEF

(Issued November 19, 1965)

On November 4, 1965, the Associated Gas Distributors group (AGD) of intervenors in the above-entitled proceedings filed a motion to omit the intermediate decision.[1] The Public Service Commission of the State of New York has joined in this motion. As an alternative to its request that the intermediate decision be omitted in its entirety, AGD asked that the Commission

[1] A number of respondents have requested that the Commission summarily reject the motion filed by AGD, or, in the alternative, grant a time extension within which they might respond to the motion. In view of the action we are taking here, particularly with respect to the revised briefing schedule, it is important to issue this order as soon as possible. It is therefore not appropriate to grant the requested time extension.

adopt an interim order procedure whereby it would promptly decide the limited issue of the cost of new gas and would set a price for new gas by an interim order which would be applicable to all gas produced in the South Louisiana Area pending the establishment of a ceiling price by final order for old gas.[2] As a further alternative, AGD urges a shortening of the briefing time schedule heretofore established by the Presiding Examiner.

AGD in support of its motion to omit the intermediate decision points to the financial impact on producers and consumers which would ensue from any delay in the issuance of a final decision by the Commission. As support for the interim order proposal, AGD claims that the record in these proceedings is similar to the record in the Docket No. AR61–1, *et al.*, proceedings on which we based our "new gas ceilings" in Opinion No. 468, 34 FPC 159.

In considering the AGD motion, we do so in the context of our awareness that the public interest calls for the expeditious submission of these proceedings to us for final decision. The Commission has expressed itself to this effect on a number of occasions and as recently as in our order of August 26, 1965. However, we do not believe that elimination of the Examiner's decision would be conducive to our arrival at an early informed judgment. We think that the Examiner who is familiar with the lengthy record here is best equipped to pass initially on the various factual and legal issues which have been or will be raised by the parties and we are confident that he will be able to provide us with an initial decision within a short time after he receives briefs from the parties. We do not believe that it would be appropriate for us at this stage of the proceedings and prior to the Examiner's evaluation of the evidence, to make any interim determination of any of the ultimate issues in the proceeding.

We believe however AGD's request for a shortening of the briefing schedule is meritorious. Accordingly, we are ordering that the service of initial briefs by the parties, interveners and the staff shall be made on or before January 17, 1966, with reply briefs to be served on or before March 7, 1966. This period for initial and reply briefing should provide the parties with an adequate opportunity to fully brief the various issues.

Accordingly, the Commission denies the motion made by AGD for the omission of the intermediate decision and its alternative request for an interim order, but the briefing schedule prescribed by the Examiner is revised as indicated above.

Commissioner Ross *concurring* stated that his agreement with the denial of waiver of the Examiner's initial decision should not be interpreted as indicating his position in future area rate cases.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr. and Carl E. Bagge.

CITY OF AUBURN, KANSAS AND CITIES SERVICE GAS COMPANY, DOCKET NO. CP65–327

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued November 19, 1965)

On April 12, 1965, City of Auburn, Kansas (Applicant), filed in Docket No. CP65–327 an application as supplemented on June 9, 1965 and September 30,

[2] Public Service Electric and Gas Co., one of the AGD group, does not join in this alternative proposal.

1965, pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Cities Service Gas Company (Respondent) to establish physical connection of its natural gas transmission facilities with the facilities proposed to be constructed by Applicant and to sell and deliver natural gas to Applicant, all as more fully set forth in the application.

Applicant proposes to construct and operate a municipal gas distribution system within its own borders, and 12 miles of 4½-inch O. D. and 3½-inch O. D. lateral pipeline facilities extending westward from a point of interconnection with the Respondent's main transmission line south of Topeka, Kansas, to Applicant's town border. Applicant also proposes to render natural gas service to customers situated along the route of and in close proximity to the proposed lateral transmission line and will construct the facilities which will enable it to render such service.

Total volumes of natural gas involved to meet Applicant's anticipated annual and peak day requirements are stated to be:

	First year	Second year	Third year
Annual (Mcf)	28,800	33,500	38,500
Peak day (Mcf)	370	430	493

The total estimated cost of Applicant's proposed construction, including the described lateral, is estimated to be $170,000, which will be financed by general obligation bonds and gas revenue bonds issued by Applicant. Based on data in the application, as supplemented, Applicant's project appears to be economically feasible.

On April 23, 1965, as supplemented on September 13, 1965, Respondent filed comments stating that it has no objections to rendering the proposed service and is able to do so with existing line capacity.

Due notice of the filing of the subject application and opportunity for hearing thereon have been given by publication in the Federal Register on April 27, 1965 (30 F.R. 5869). Notice of intervention was filed by the Kansas State Corporation Commission on April 30, 1965, and was withdrawn on September 24, 1965. The Gas Service Company after having filed a petition for leave to intervene on April 30, 1965, filed a Notice of Withdrawal thereof on September 27, 1965. No other protest, petition to intervene, or notice of intervention or request for hearing has been filed in this proceeding.

The Commission finds:

(1) Respondent, Cities Service Gas Company, a Delaware corporation having its principal place of business in Oklahoma City, Oklahoma, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of December 28, 1943, in Docket No. G–298 (4 FPC 471).

(2) Applicant is legally authorized to engage in the local distribution of natural gas to the public within the meaning of Section 7(a) of the Natural Gas Act.

(3) It is necessary and desirable in the public interest to direct Respondent to establish physical connection of its transmission facilities with the facilities proposed to be constructed and operated by Applicant, and to sell and deliver to Applicant under a service agreement to be executed by Applicant with Respondent in accordance with the Commission's Regulations, up to 493 Mcf per day of natural gas for distribution and resale as hereinbefore described and as more fully described in the application and supplements in this proceeding.

(4) Applicant should be prepared to receive natural gas from Respondent for distribution in Auburn, Kansas, and environs, and along the lateral thereto within one year from the date of the issuance of this order.

(5) The requirement that Respondent serve Applicant, as requested, will not place an undue burden upon it nor impair its ability to render adequate service to its existing customers.

The Commission orders:

(A) Respondent, is directed to establish physical connection of its facilities with the facilities proposed to be constructed and operated by Applicant, as herein described, and to sell and deliver up to 493 Mcf of natural gas daily to Applicant under a service agreement to be executed by Applicant with Respondent in accordance with the Commission's Regulations for distribution and resale as hereinbefore described and as more fully described in the application and supplements in this proceeding. Such service shall be rendered pursuant to Respondent's presently filed appropriate rate schedule.

(B) Respondent shall report to the Commission in writing the date of commencement of service to Applicant within 10 days thereof.

(C) Applicant shall be prepared to receive natural gas as directed herein within one year from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

THE CALIFORNIA COMPANY, A DIVISION OF CHEVRON OIL COMPANY, DOCKET NO. CI65-560

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued November 19, 1965)

On December 11, 1964, The California Company, a Division of California Oil Company[1] (Applicant) filed in Docket No. CI65-560 an application, as supplemented on April 28, 1965, pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the sale for resale and delivery of natural gas in interstate commerce to Natural Gas Pipeline Company of America (Natural) from acreage in the West Cameron Blocks 17-49 Field Area, offshore Cameron Parish, Louisiana, all as more fully set forth in the application as supplemented.

Applicant proposes to sell gas to Natural at initial rates of 19.0 cents per Mcf at 15.025 psia for gas produced from the Federal Domain and 20.625 cents per Mcf at 15.025 psia for gas produced from acreage subject to the taxing jurisdiction of the State of Louisiana. The related gas sales contract provides for reimbursement by Natural of any future taxes at a rate of 100 percent for any increase of 0.5 cent Mcf through 1.0 cent per Mcf and at a rate of 50 percent for any remainder over 1.0 cent per Mcf. Applicant is required to deliver pipeline quality gas with a downward Btu adjustment for gas below 1,000 Btu's and no upward Btu adjustment.

The related gas sales contract, as amended, indicates that Applicant has proven reserves of approximately 653,685,000 Mcf of gas and probable reserves of 247,360,000 Mcf of gas at 14.73 psia in the dedicated acreage. Most of the reserves are located within the state taxing jurisdiction. The contract

[1] Now The California Company, a Division of Chevron Oil Company.

provides that Natural purchase a daily quantity of gas averaged over each year of the lesser of the quantity listed in column (a) below, or after a reserve determination, a quantity equal of 1,000 Mcf of gas for each 8,000,000 Mcf of recoverable reserves in place. The maximum daily quantity is shown in column (b).

Year	(a) Contract quantity (Mcf)	(b) Maximum daily quantity (Mcf)
1	50,000	100,000
2	75,000	125,000
3	100,000	150,000
4	125,000	187,500
5	150,000	225,000
6	175,000	262,500
7 and thereafter	200,000	300,000

In its original application filed on December 11, 1964, applicant had proposed a composite initial price for production from both onshore and offshore acreage along with other contract provisions similar to those included in most contracts in this area. On January 18, 1965, the Public Service Commission of the State of New York intervened in opposition to the application. Thereafter, on April 28, 1965, the application was amended to provide the prices and more favorable contract conditions described above. On May 10, 1965, the New York Commission indicated that the proposal was now acceptable to it by withdrawing its intervention. No other protests have been received. Thus, this application is presented to us in the nature of a settlement concurred in by the applicant, our staff and the intervenor. While the prices are in excess of our recent in-line determinations they are below our guidelines and are packaged with other contract provisions more favorable than those usually provided in this area. We shall, therefore, grant this application.

At a hearing held on October 28, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application, as supplemented, and exhibits thereto, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission.

(2) The sale of natural gas hereinbefore described, as more fully described, in the application herein, will be made in interstate commerce, subject to the jurisdiction of the Commission, and such sale by Applicant, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, is subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The sale of natural gas by Applicant, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, is required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

The Commission orders:

(A) A certificate of public convenience and necessity is issued upon the terms and conditions of this order, authorizing the sale by Applicant of natural gas in interstate commerce for resale, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary for such sale, all as hereinbefore described and as more fully described in the application in this proceeding.

(B) The certificate granted in paragraph (A) above is not transferable and shall be effective only so long as Applicant continues the acts or operations hereby authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations and orders of the Commission.

(C) The grant of the certificate issued in paragraph (A) above shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act or of Part 154 or Part 157 of the Commission's Regulations thereunder, and is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against Applicant. Further, our action in this proceeding shall not foreclose nor prejudice any future proceedings or objections relating to the operation of any price or related provisions in the gas purchase contract herein involved. Nor shall the grant of the certificate aforesaid for service to the particular customer involved imply approval of all of the terms of the contract, particularly as to the cessation of service upon termination of said contract, as provided by Section 7(b) of the Natural Gas Act. Nor shall the grant of the certificate aforesaid be construed to preclude the imposition of any sanctions pursuant to the provisions of the Natural Gas Act for the unauthorized commencement of any sale of natural gas subject to said certificate.

(D) The grant of the certificate issued herein is upon the condition that no increase in rate shall be filed prior to July 1, 1967, at any price which would exceed the ceiling prescribed for the given area by paragraph (d) of the Commission's Statement of General Policy No. 61–1, as amended.

Ross, *Commissioner, dissenting:*

Only a few days ago, in the *Sohio* case,[1] the Commission again considered the policy under which it grants certificates to commence sales from Southern Louisiana. In that matter, an intervenor argued that the Staff's recommendation of 18.25¢ as a just and reasonable price in the South Louisiana Area Rate Proceeding (AR61–2) should be used as a refund floor in issuing new certificates. The Commission unanimously rejected this argument, stating that it would be

> inconsistent with the Commission's uniform practice of fixing initial producer rates on an in-line basis and of ordering refunds, where otherwise appropriate, only to the extent the rates previously charged were higher than the in-line price.

Specifically, the Commission stated:

> Nothing in the Southern Louisiana area rate proceeding, to say nothing of the just and reasonable price levels advocated therein by the various parties, suggests that the in-line price level presently applicable in South Louisiana differs from the 18.5¢ price we have previously found to be appropriate.

Thus, despite the approach of area pricing for Southern Louisiana, the Commission said that it will stick to its interim pricing scheme until it finally decides a just and reasonable rate. This is a consistent policy and a

[1] *Sohio Petroleum Co.*, Docket No. CI66–193, letter-order dated November 5, 1965.

fair one—that is, so long as the Commission sticks to the rules of interim pricing.

This recent action of the Commission in *Sohio* merely reiterates a policy consistently followed by the Commission during the last four or more years. This policy evolved from the Supreme Court's reversal of the Commission's unconditioned grant of a certificate for a South Louisiana sale at 21.4¢ per Mcf, in *CATCO*, decided in 1959.[2] Since that time the Commission has decided *five* litigated producer certificate cases covering sales of gas from Southern Louisiana under contracts executed in 1956, 1957, 1958, 1959, 1960, 1961, 1962, and 1963.[3] In each and every situation, 18.5¢ (offshore) and 20.0¢ (onshore) were found to be the line price—the ceiling price—irrespective of contract conditions. No producer and no contract, regardless of its terms, was granted a permanent certificate at a price in excess of these in-line levels (with the exception of settlements accepted by the Commission *before* the *Union Texas* and *Superior* opinions were issued.[4]

Since *Superior*, the Commission, in April of this year, again considered its in-line policy in Southern Louisiana.[5] In that determination, the Commission explicitly reaffirmed its in-line finding of 18.5¢ per Mcf for offshore Louisiana (p. 867). However, it recognized that the producer undertook the obligation of delivering the gas onshore—a distance of 76 miles. In the Commission's opinion, this substantial service merited a 0.5¢ per Mcf premium. Significantly, the Commission distinguished the *Superior* sale, which involved 28 miles of transportation by the producers, which the Commission conditioned to 18.5¢ per Mcf. The Commission concluded:

> The Commission will allow this same initial base price [19.0¢ per Mcf] to producers having production in such distant offshore fields but who as part of the transaction agree to transport the gas for substantial distances for delivery to a pipeline on shore.[6]

To summarize, over the last four or more years the Commission has granted one permanent certificate at a price above the in-line level where unique premium factors were involved, features not present here nor alleged to be found here. All the others, with the exception of certain genuine settlements, were granted at the in-line level.

Against this impressive and consistent background, the majority attempts to rationalize its action in three ways. First, it claims that the producer made certain "favorable" changes in his contract with the pipeline. I agree, but this Commission has never held that these "favorable" conditions were entitled to a premium. To the contrary, it is my understanding that there are several Southern Louisiana contracts containing similar "favorable" conditions, and they have all been conditioned at the same in-line level; 18.5¢ offshore; 20.0¢ onshore.

The majority also emphasize that there are no protests to this application. Are we to assume from this that the majority is attempting to wash its hands of responsibility for making an independent determination of whether appli-

[3] *CATCO*, 27 FPC 96 (1962); *Placid Oil Co.*, 30 FPC 283 (1963); *United Gas Pipe Line Company*, 30 FPC 329 (1963); *Union Texas Petroleum*, 32 FPC 254 (1964); *Superior Oil Co.*, 32 FPC 241 (1964).

[4] Significantly, these settlements involved refunds under so-called unconditioned temporaries—an issue the majority has thus far decided not to decide.

[5] *Hassie Hunt Trust*, Docket No. CI65-596, *et al.*, issued April 23, 1965, 33 FPC 866.

[6] *Ibid.*

cations are consistent with the public interest? Is the majority proclaiming that it will now assume an application meets the public interest standard if no outside party objects? Is the majority assuming that the directives of the Supreme Court in *CATCO* to hold the line applies to possible intervenors—but not to the Commission itself? Who determines the price: intervenors or the Commission? If intervenors, which ones?

If nothing else, this application indicates the necessity of the participation by interested parties in Commission proceedings and the clear and present danger of leaving the Commission to its own devices. Had there been a continuing intervention here, no certificate would have been granted without the usual refund condition. As it is, permanent certificates at out of line prices would be routinely granted in derogation of the policy developed by the Commission over the last four years—a state of affairs I find profoundly unimpressive.

Based on the solid precedent of the last four years, there is at least a reasonable possibility that this sale, were it to be examined in an in-line proceeding would be conditioned to the in-line level. This being the case, what is the *quid pro quo* for the settlement? What is the producer giving up? I had assumed, as had Commissioner Black, that the essence of a *bona fide* settlement is a *quid pro quo* exchange.[7]

In this connection, it is a bit of a distortion to characterize this application as a settlement. A settlement generally involves negotiations by interested parties, including Staff, the result of which is an offer of settlement, executed by all the parties and presented to the Commission. Here, there is simply a withdrawal of intervention and submittal of an amended contract. At no time was Staff a party to any negotiations, assuming there were any.

Finally, the majority suggests that the grant of a permanent certificate at a price above the in-line level is justified because it is lower than the guideline ceiling. Really! It is of course true that the Commission, concurrent with the adoption of the *Union Texas* and *Superior* opinions, failed to adjust the guideline levels as it had done in other areas following in-line determinations. However, it has followed a policy of universally conditioning temporary certificates at higher levels to provide for a refund down to the in-line level—a policy explicitly emphasized in its recent order in *Sohio*.[8]

To conclude: When intervenors seek a refund floor below the in-line price, the Commission indignantly says "no" because our policy is to adhere to in-line pricing. Yet, when a producer wants a permanent certificate at a higher price, the majority somehow forgets its in-line policy and grants it.

For these reasons, I dissent to the unprecedented and unconditioned grant of this permanent certificate above the in-line level.

---

[7] *Roy M. Huffington, Inc., et al.*, Docket No. G–18680, dissenting statement of Commissioner David S. Black, *supra*, p. 1278.

[8] The following list includes all the new Southern Louisiana sales certificated by the Commission at prices above the in-line level since the *Union-Texas* and *Superior* opinions were adopted; CI65–20, CI62–1504, CI65–224, CI64–112, CI65–127, CI65–393, CI65–349, CI65–384, CI63–179, G–10122, G–10139, G–10143, G–10146, CI62–73, CI62–102, G–8817, CI65–1362, G–19437, G–19838, G–13680, G–13827, G–13948, G–19707, G–19719, G–20020, CI65–718, CI65–727, CI65–596, CI65–597, CI65–598, CI65–803, CI65–862, CI65–812, CI65–833, CI65–838, G–8817, CI64–502, CI63–1309, CI65–825, CP65–282. In each of these cases but two, a refund condition down to the in-line level was included in the certificate. The two exceptions comprise the *Hassie Hunt* case, *supra*, where a 0.5¢ per Mcf premium was justified, and *Consolidated Gas Supply Corp.*, Docket No. CP65–282, granted September 3, 1965, 34 FPC 733 (to which I dissented) where an out-of-line certificate was granted without explanation.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr. and Carl E. Bagge.

CENTRAL MAINE POWER COMPANY, DOCKET NO. E-7244

ORDER AUTHORIZING ACQUISITION OF FACILITIES

(Issued November 19, 1965)

Central Maine Power Company (Central Maine), filed an application with the Federal Power Commission on September 9, 1965, seeking an order, pursuant to Section 203 of the Federal Power Act, authorizing the acquisition of all of the assets of Casco Bay Light and Power Company (Casco).

Central Maine is incorporated under the laws of the State of Maine and has its principal place of business at Augusta, Maine. It is engaged in the generation, purchase, transmission, distribution and sale of electric energy serving all of the 16 counties in the State of Maine except the Counties of Aroostook and Washington.

Casco is incorporated under the laws of the State of Maine and has its principal business office at Portland, Maine. It is engaged in the generation, purchase, transmission, distribution and sale of electric energy serving 7 islands in Casco Bay with power generated by three diesel-driven generators on Peaks Island and distributed over 20 miles of distribution lines located on the seven islands, interconnected by 10 miles of cable. Casco serves approximately 1,500 customers.

According to the application, Central Maine proposes to acquire all of the assets of Casco except the franchise to be a corporation, including three diesel generators, distribution lines, cables interconnecting the islands, real estate, automotive equipment and all other related facilities. Central Maine states that Casco's facilities will be fully integrated with its operations in contiguous areas and it will assume full obligations to serve all customers in the area now being served by Casco and to serve the territories authorized but not presently served by Casco.

Central Maine's consideration for Casco's assets will be: (a) The amount of cash which will be equivalent to the per share market price on the settlement date of Central Maine's Common Stock, multiplied by four on the basis of four shares of Central Maine's Common Stock for each share of Casco's Common Stock, and then multiplied by twenty-two hundred fifty for the number of shares of Casco's Common Stock outstanding; plus (b) The amount of cash sufficient to enable Casco to call for redemption all of its outstanding 1,230 shares of 6% Preferred Stock and all of its $250,000 5½% First Mortgage Bonds; plus (c) The amount of cash sufficient to discharge a note payable by Casco, $83,671 as of July 31, 1965; plus (d) The amount of $7,150 for liquidating expenses of Casco. As of July 31, 1965, this consideration would have totaled $665,606. This amount would have been $22,348 less than Casco's net assets of $687,954 as of the same date. Central Maine proposes to credit the difference of $22,348 to Accumulated Provision for Depreciation. Any debit acquisition adjustment should be eliminated by a debit to Miscellaneous Debits to Surplus.

According to the application, Casco is faced with the necessity of providing additional generating capacity or an interconnection with the mainland system to insure adequate service to its customers. Loss of its largest generating unit at time of the system peak in summer would result in severe curtailment in electric service. Load growth on the islands has also made necessary an increase in the capacity of some of the distribution facilities.

Upon completion of the acquisition, Central Maine proposes to interconnect Casco's system with its own, improve the distribution system, and put the diesel generating units on standby with provision for full depreciation of the units at the end of five years. Major maintenance, customer accounting, system engineering and purchasing would be shifted to Central Maine's larger organization. These factors are expected to result in substantial improvement in service rendered to the customers and to provide operating economies not available to the small isolated Casco system.

Central Maine represents that the present management of Casco is of the opinion that the expenditures necessary to improve the system will require a rate increase. The present rates of Casco are significantly higher than those of Central Maine except for 18 commercial and combination power and lighting customers.

Central Maine proposes to change the Casco rates in five equal steps to conform them to its own filed rates. Central Maine maintains that the proposed transaction would give the customers of Casco improved service at lower rates.

Written notice of the application has been given to the Public Utilities Commission of Maine and to the Governor of that State. Notice was also published in the Federal Register on September 24, 1965 (30 F.R. 12257), stating that any person desiring to be heard or to make any protest with reference to said application should on or before October 8, 1965, file with the Federal Power Commission, Washington, D.C. 20426, petitions or protests in accordance with the requirements of the Commission's Rules of Practice and Procedure (18 CFR 1.8 or 1.10). No protest or petition or request to be heard in opposition to the granting of the application has been received.

The Commission finds:

(1) Central Maine, a corporation, is a public utility within the meaning of Section 203 of the Federal Power Act, subject to the jurisdiction of the Commission as heretofore described and set forth in the Commission's order issued June 2, 1965, *Central Maine Power Company* in Docket No. E-7215 (33 FPC 1157).

(2) By the proposed transaction, Central Maine will merge or consolidate its facilities subject to the jurisdiction of the Commission with those of Casco, another person, within the meaning and subject to the requirements of Section 203 of the Federal Power Act.

(3) The proposed acquisition of facilities by Central Maine, as described above, upon the terms and conditions set forth in the application, and subject to the provisions of this order will be consistent with the public interest as expressed in Section 203 of the Federal Power Act.

The Commission orders:

(A) The proposed acquisition by Central Maine of the aforementioned electric facilities, all as described above, is authorized and approved upon the terms and conditions and for the purposes set forth in the application subject to the provisions of this order.

(B) Central Maine shall record the proposed transaction herein authorized and the facilities and properties referred to above as provided in the Commission's Uniform System of Accounts Prescribed for Public Utilities and Licensees. Any credit acquisition adjustment shall be transferred to Accumulated Provision for Depreciation and any debit acquisition adjustment be eliminated by a debit to Miscellaneous Debits to Surplus.

(C) This authorization shall expire unless the transaction herein authorized and approved is consummated within 90 days from the date of issuance of this order.

(D) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuation, estimates or determination of cost, or any matter whatsoever now pending or which may come before this Commission or any other regulatory body and nothing herein shall be construed as an acquiescence by this Commission in any estimate or determination of cost or any valuation of property claimed or asserted.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr. and Carl E. Bagge.

NATURAL GAS PIPELINE COMPANY OF AMERICA, DOCKET NOS. CP65–425 AND CP66–1

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued November 19, 1965)

On June 30, 1965, and July 1, 1965, Natural Gas Pipeline Company of America (Applicant) filed in Docket Nos. CP65–425 and CP66–1, respectively, applications for certificates of public convenience and necessity authorizing the acquisition from Humble Oil & Refining Company (Humble) and the construction and operation of certain facilities to enable Applicant to take into its interstate natural gas pipeline system natural gas purchased from Humble, all as more fully set forth in the applications.

In Docket No. CP65–425 Applicant proposes to acquire from Humble 5.2 miles of 8-inch high pressure pipeline at a cost of $84,639 and to construct a measuring station and tap at an estimated cost of $24,000, all to be financed from funds on hand. The proposed acquisition and construction will enable Applicant to purchase and receive gas produced by Humble in the Santa Fe, Santa Fe East, Santa Fe South and Todos Santos Fields in Brooks and Hidalgo Counties, Texas. Remaining recoverable reserves in said areas are estimated to be 197,683 MMcf at 14.65 psia, and Humble has filed an application in Docket No. CI65–1369 for a certificate of public convenience and necessity authorizing the sale and delivery of said gas to Applicant.

In Docket No. CP66–1 Applicant proposes to acquire from Humble 7.4 miles of 10-inch high pressure pipeline at a cost of $152,000 and to construct a measuring station and tap at an estimated cost of $29,000, all to be financed from funds on hand. The proposed acquisition and construction will enable Applicant to purchase and receive gas produced by Humble in the Tomball Field, Harris County, Texas. Remaining recoverable reserves in said area are estimated to be 160,000 MMcf at 14.65 psia, and Humble has filed an application in Docket No. CI65–1363 for a certificate of public convenience and necessity authorizing the sale and delivery of said gas to Applicant.

Applicant states that it has examined the facilities proposed to be acquired from Humble and that they are suitable for the proposed transportation of natural gas. Construction of a suitable pipeline in lieu of the acquisition proposed in Docket No. CP65–425 is estimated to cost $124,000, and construction of a suitable pipeline in lieu of the acquisition proposed in Docket No. CP66–1 is estimated to cost $200,000. In view of Applicant's continuing need

to acquire new supplies of gas and in view of the cost of the facilities proposed to be acquired and constructed, it appears that Applicant's proposals are economically feasible and required by the public convenience and necessity.

Concurrently herewith temporary certificates are being issued to Humble in Docket Nos. CI65–1363 and CI65–1369.

After due notice no petition to intervene, notice of intervention or protest to the granting of the applications has been received.

At a hearing held on November 17, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the applications and exhibits thereto, submitted in support of the authorizations sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Natural Gas Pipeline Company of America, a Delaware corporation having its principal place of business in Chicago, Illinois, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of October 13, 1942, in Docket No. G–235 (3 FPC 830).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, will be used for the transportation of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the acquisition, construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The cost of the facilities proposed to be acquired by Applicant is properly includible in Applicant's plant accounts.

(5) The proposed acquisition, construction and operation of facilities by Applicant are required by the public convenience and necessity, and certificates therefor should be issued as hereinafter ordered and conditioned.

(6) Public convenience and necessity require that the certificates issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), (d) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) Certificates of public convenience and necessity are issued authorizing Applicant, Natural Gas Pipeline Company of America, to acquire, construct and operate facilities as hereinbefore described, all as more fully described in the applications in this proceeding, upon the terms and conditions of this order.

(B) The certificates issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), (d) and (e) of Section 157.20 of such Regulations.

(C) The acquisitions and construction authorized in paragraph (A) above shall be completed and the operation of the facilities shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within three months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

FRANK E. PEACOCK, PROJECT NO. 2427

ORDER ISSUING LICENSE (MAJOR)

(Issued November 19, 1965)*

Application was filed on January 7, 1965, by Frank E. Peacock (Applicant) of Wilmette, Illinois, for a license under Section 4(e) of the Federal Power Act (Act) for proposed Project No. 2427, known as the Woods Falls Project, to be located on the Black River, in the Village of Glen Park in Jefferson County, New York. The project will not affect lands of the United States.

The Secretary of the Army and the Chief of Engineers have advised that the plans of the project structures affecting navigation are satisfactory insofar as the interests of navigation are concerned.

The Department of the Interior, in reporting on the application, has recommended for inclusion in any license for the project the terms and conditions in the interests of fish and wildlife resources set forth in attached Form L–4.

The Department of Health, Education, and Welfare has advised that the project is not expected to have any adverse effects on water supply, water pollution control, or vector control.

According to the application for license, Applicant has contracted a 30-year lease with Niagara Mohawk Power Corporation for necessary water rights, a lease of the lands for the proposed project, and the purchase of project power. In the circumstances, the license herein granted shall be for a period of 30 years, effective as of October 1, 1965. It should be noted that Article 22 of Form L–4 (Revised June 1, 1964, 32 FPC 839) which is being included among the conditions upon which this license is being issued, requires that the licensee shall make good any defective title to project lands in the event that the project is recaptured by the United States at the end of the license term. Consequently, we are including a license condition (Article 33) requiring the licensee, to obtain an option from Niagara Mohawk permitting him, or his successors or assigns to acquire land within the project boundary in the event the United States should exercise its rights to recapture the project at the end of the license term.

In our order of October 14, 1964, issuing a preliminary permit to Applicant for the proposed subject project (32 FPC 1101, 1102) we found that the Black River from its mouth in Lake Ontario to a point upstream at least to Lyons Falls at river-mile 72, is a navigable waterway of the United States. Proposed Project No. 2427 is to be located in this stretch of the river.

The Commission finds:

(1) Applicant is a citizen of the United States and has submitted satisfactory evidence of compliance with the requirements of all applicable State laws insofar as necessary to effectuate the purposes of a license for the project.

(2) Public notice of the filing of the application has been given. No protests or petitions to intervene have been received. No conflicting application is before the Commission.

(3) The project does not affect a Government dam, nor will the issuance of a license therefor, as hereinafter provided, affect the development of any

*Modified by order issued December 15, 1965, 34 FPC 1473.

water resources for public purposes which should be undertaken by the United States.

(4) Subject to the terms and conditions hereinafter imposed, the project will be best adapted to a comprehensive plan for improving or developing a waterway or waterways for the use or benefit of interstate or foreign commerce, for the improvement and utilization of water power development, and for other beneficial public uses, including recreational purposes.

(5) The installed horsepower capacity of the project hereinafter authorized for the purpose of computing the capacity component of the administrative annual charge is 12,000 horsepower, and the amount of annual charges, based on such capacity, to be paid under the license for the project, for the costs of administration of Part I of the Act is reasonable.

(6) Exhibit R (FPC No. 2427–7), filed with the Commission on March 8, 1965, conforms to the Commission's rules and regulations and should be approved as part of this license.

(7) The exhibits designated and described in paragraph (B) below conform to the Commission's rules and regulations and should be approved as part of this license.

The Commission orders:

(A) This license is hereby issued to Frank E. Peacock (Licensee) of Wilmette, Illinois, under Section 4(e) of the Federal Power Act (Act) for a period of 30 years, effective as of October 1, 1965, and terminating September 30, 1995, for the construction, operation and maintenance of Project No. 2427, located on the Black River, navigable waters of the United States, subject to the terms and conditions of the Act which is incorporated herein by reference as a part of this license, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) Woods Falls Project No. 2427 consists of:

(i) all lands constituting the project area and enclosed by the project boundary or limits which are otherwise defined, and/or interest in such lands necessary or appropriate for the purposes of the project, whether such lands or interests therein are owned or held by the Licensee or by the United States—such project area and project boundary being more specifically shown and described by a certain Exhibit of the application for license which is designated as follows:

Exhibit J (FPC No. 2427–2) General Plan.

(ii) project works as follows: (1) a diversion dam about 13 feet high; (2) a 15 foot diameter penstock about 125 feet long; (3) a powerhouse containing a 13,000 hp turbine driving a 10,000 kva generator; (4) a substation; (5) a 23 kv transmission line about 4,500 feet long; and (6) appurtenant facilities; the location, nature and character of which are more specifically shown and described by the exhibit hereinbefore cited and by certain other exhibits which also formed part of the application for license and which are designated and described as follows:

Exhibit L	FPC No.	Title, Woods Falls Development
1	2427–3	Dam.
2	2427–4	Intake.
3	2427–5	Excavation and gates.
4	2427–6	Penstock and powerhouse.

Exhibit M: consisting of a typewritten paragraph entitled, "Equipment Description" on page 4, revised 8/25/65, of the application.

(iii) all of the structures, fixtures, equipment or facilities used or useful in the maintenance and operation of the project and located on the project area, including such portable property as may be used or useful in connection with the project or any part thereof whether located on or off the project area, if and to the extent that the inclusion of such property as part of the project is approved or acquiesced in by the Commission; also, all riparian or other rights the use or possession of which is necessary or appropriate in the maintenance or operation of the project.

(C) This license is subject to the terms and conditions set forth in Form L–4 (Revised June 1, 1964) entitled "Terms and Conditions of License for Unconstructed Project Affecting Navigable Waters of the United States", (32 FPC 839) which terms and conditions, designated as Articles 1 through 29, are attached hereto and made a part hereof, and subject to the following special conditions set forth herein as additional articles:

Article 30. The Licensee shall pay to the United States the following annual charge effective October 1, 1965:

For the purpose of reimbursing the United States for the costs of administration of Part I of the Act, a reasonable annual charge as determined by the Commission in accordance with the provisions of its regulations, in effect from time to time. The authorized installed capacity for such purposes is 12,000 horsepower.

Article 31. The Licensee shall commence construction of the project works not later than June 1, 1966, shall thereafter in good faith and with due diligence prosecute such construction and shall complete construction of such works not later than May 31, 1968.

Article 32. Licensee shall provide shear between the base of the dam and the foundation. The foundation shall be approved by an authorized Commission representative before commencing placement of concrete for the dam.

Article 33. The Licensee shall submit for Commission approval the terms of an option with Niagara Mohawk before commencing construction of the project works. This option shall provide a method whereby the Licensee, its successors and assigns, may purchase the lands within the project boundary at a price based on Niagara Mohawk's net investment in such lands if at the end of the license term the United States exercises its right to takeover the project pursuant to Section 14 of the Federal Power Act.

Article 34. Licensee shall design and maintain the flashboard system on the dam in such manner that it will fail when subjected to a load equivalent to five and one-half feet of surcharge or less.

(D) The Exhibit R designated in finding (6) above is hereby approved as part of this license.

(E) The exhibits designated and described in paragraph (B) above are hereby approved as part of this license.

(F) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license. In acknowledgment of the acceptance of this license, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr. and Carl E. Bagge.

ST. JOSEPH LIGHT & POWER COMPANY AND MICHIGAN WISCONSIN PIPE LINE COMPANY, DOCKET NO. CP66–46

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued November 19, 1965)

On August 11, 1965, St. Joseph Light & Power Company (Applicant), filed in Docket No. CP66–46 an application as supplemented on September 3, 1965 and October 11, 1965, pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Michigan Wisconsin Pipe Line Company (Respondent) to extend its gas transportation facilities, make physical connection of its facilities with those proposed by Applicant and sell natural gas to Applicant, all as more fully set forth in the application.

Applicant seeks delivery of natural gas to be purchased from Respondent pursuant to the SGS–1 rate schedule of the effective tariff of Respondent for distribution at retail in the City of Skidmore, Missouri. Applicant states that Respondent's transmission pipeline passes within six miles of the south city limits of Skidmore.

Applicant proposes to construct and operate a distribution system in the City of Skidmore, and to construct approximately 4.3 miles of 3.5 inch transmission line which will extend from the end of Respondent's proposed 1.72 miles of lateral to Skidmore.

In lieu of a metering station costing an estimated $16,200 and .91 mile of lateral costing an estimated $18,200, or a total of $34,400, Respondent will utilize its existing Maitland Metering Station and construct 1.72 miles of lateral costing approximately $34,400. The lateral cost of $34,400 will be consistent with Respondents obligation under its 10 cent formula for lateral costs.

The estimated natural gas requirements for the City of Skidmore are as follows:

	First year	Second year	Third year
Annual (Mcf)	20,300	25,400	27,300
Peak day (Mcf)	211	263	282

The total estimated cost of Applicant's proposed facilities is $114,100, which will be financed by internally generated funds. The 1.72 miles of 4½-inch lateral to be constructed by Respondent is estimated to cost $34,400.

On June 22, 1965, the City of Skidmore, Missouri, granted Applicant a franchise to sell and distribute natural gas in said City. The Public Service Commission of the State of Missouri has been requested to grant Applicant a certificate authorizing the construction and operation of the necessary facilities and service to the public in the City of Skidmore, Missouri.

On August 24, 1965, Respondent filed an answer to the application stating that it has no objections to providing the proposed service and constructing the proposed facilities. Respondent states that in view of the *de minimis* nature of the volumes involved, it can provide the requested service from

existing sources of gas supply without the construction of additional main line facilities.

Due notice of the filing of the application and opportunity for hearing thereon was published in the Federal Register on August 27, 1965 (30 F.R. 11118). No protest, petition to intervene or notice of intervention has been filed.

The Commission finds:

(1) Respondent, Michigan Wisconsin Pipe Line Company, a Delaware corporation having its principal place of business in Detroit, Michigan, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of November 30, 1946, in Docket No. G-669 (5 FPC 953).

(2) Applicant is a public utility company in the State of Missouri and is authorized to construct and operate facilities to distribute and sell natural gas to inhabitants of the State of Missouri.

(3) It is necessary and desirable in the public interest that Respondent be directed to extend its lateral facilities 1.72 miles and establish physical connection of its transportation facilities with the facilities proposed by Applicant as hereinbefore described and as more fully set forth in the applicaton, as hereinafter ordered and conditioned.

(4) The requirement that Respondent serve Applicant as requested, will not place an undue burden upon Respondent nor impair its ability to render adequate service to existing customers.

The Commission orders:

(A) Respondent is directed to extend its lateral facilities 1.72 miles and to establish physical connection of its natural gas transmission system with the facilities to be constructed by Applicant and to sell and deliver up to 282 Mcf of natural gas per day to Applicant, all as hereinbefore described and as more fully described in the application.

(B) The order against the Respondent is made contingent upon the approval of Applicant's pending application before the Public Service Commission of the State of Missouri.

(C) Applicant shall be prepared to receive natural gas from Respondent within one year from the date of this order.

(D) Respondent shall notify the Commission of the commencement of service within 10 days thereof.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

SKELLY OIL COMPANY, ET AL., DOCKET NO. G-18638, ET AL.; SOUTH TEXAS NATURAL GAS GATHERING COMPANY, DOCKET NO. G-18907

ORDER DIRECTING COMPLIANCE WITH PARAGRAPH (D) OF OPINION NO. 362 REJECTING SUPPLEMENT NO. 56 TO SOUTH TEXAS NATURAL GAS GATHERING COMPANY FPC GAS RATE SCHEDULE NO. 2 AND RESCINDING A LETTER OF THE SECRETARY DATED JULY 15, 1964

(Issued November 19, 1965)*

South Texas Natural Gas Gathering Company (South Texas) by letter dated June 16, 1964, transmitted to the Secretary of the Commission Supple-

* Rehearing denied by order issued January 14, 1966, 35 FPC 68.

ment No. 56 to its FPC Gas Rate Schedule No. 2 entitled "Notice of Change in Rate For Sale of Gas by South Texas Natural Gas Gathering Company to Transcontinental Gas Pipe Line Corporation." This supplement purportedly was filed in compliance with ordering paragraph (D) of the Commission's Opinion No. 362 and order in *Skelly Oil Company, et al.*, Docket No. G–18638, *et al.*, 28 FPC 401.[1]

South Texas was advised by letter dated July 15, 1964, from the Secretary of the Commission that said Supplement No. 56 was accepted for filing and that it constituted satisfactory compliance with paragraph (D) of the Commission's Opinion No. 362 noted above. On December 9, 1964, Consolidated Edison Company Incorporated, of New York, Long Island Lighting Company, and The Brooklyn Union Gas Company (Movants) filed a motion with this Commission requesting that the Commission reject South Texas Supplement No. 56 and that it rescind the letter of July 15, 1964, which stated that this filing constituted satisfactory compliance with paragraph (D) of its Opinion No. 362.

Movants contend that Supplement No. 56 does not comply with paragraph (D) of the Commission's Opinion. They further claim that they were not served with copies of Supplement No. 56 to South Texas' Rate Schedule No. 2, nor were they appraised of the Secretary's letter stating that it constituted satisfactory compliance with paragraph (D). They claim that they first became aware of the method employed by South Texas in computing the rate reflected by Supplement No. 56 on November 10, 1964.

Movants contend and South Texas admits that it predicated the rate in Supplement No. 56 upon its over-all gas purchases in the year 1963. South Texas argues that, contrary to the Movants claims, the language in ordering paragraph (D) of Opinion No. 362 requires that it compute its rates to Transco upon the average cost of the over-all volume of gas that it purchases.

Historically, at the time the application in the captioned proceeding was before the Commission, South Texas purchased and transported gas for Texas Illinois Natural Gas Pipeline Company (presently Natural Gas Pipeline Company of America). It was to receive 19.5¢ per Mcf for gas which it purchased in the fields in Texas District 4 and delivered to Texas Illinois at the La Gloria meter station. It was also certificated to transport and deliver at La Gloria, gas purchased by Texas Illinois from Shell Oil, receiving a transportation charge of 1.5¢ per Mcf.

In addition, in the present dockets South Texas was authorized to sell a minimum of 50,000 and a maximum of 70,000 Mcf of gas per day to Transco. This gas was to be delivered to Transco at a specified delivery point in Texas Railroad District No. 1 at a price of 20¢ per Mcf. It is apparent from the parties' contracts that the Transco transaction was not intended to be integrated with the Texas Illinois transaction for the purposes of fixing South Texas' rates to Transco. And, there is nothing in Opinion No. 362 which contemplates a modification of this concept.

---

[1] Ordering paragraph (D) of the aforementioned Opinion and order provides:

(D) As a condition to the certificate hereby issued to it, South Texas, on the date of issuance of this order, shall commence charging, and shall continue to charge until lawfully changed in accordance with the Natural Gas Act, a rate for the sale of gas to Transco that shall represent its present initial charge of 20 cents per Mcf at 14.65 psia, less the reduction in its average cost of purchased gas effected by this order. Such average cost of purchased gas shall be computed as of the date of issuance of this order by using the rates ordered herein for producers as provided in paragraph (C).

The language in *Skelly* (Opinion No. 362) makes it apparent that the reduction in rate to Transco was to be predicated upon the gas purchased by South Texas for its performance of the Transco contract:

> The proper rate for the South Texas sale to Transco is an important issue in these proceedings, for this rate reflects the producer prices and the costs of South Texas and The Joint Venture. *South Texas' cost of service presentation, as discussed below, is based on its average purchased gas costs from the producers, which has risen with each succeeding phase of its expansion.* Conditioning the producer certificates that are above 15 cents (with the exception of the four dockets referred to at page 412, *supra*) will, of course, lower the average cost of purchased gas and will require a lower price to Transco. (*Skelly*, pp. 414, 415). [Emphasis added]

It seems clear that the above language did not envision the utilization of the over-all volumes of gas that South Texas purchases in computing the required reduction. Accordingly, we find that South Texas's Supplement No. 56 filing does not comply with ordering paragraph (D) of our Opinion No. 362.

The contention of South Texas that Movants' motion is untimely is without merit. South Texas in its answer to the motion indicates that it made its purported compliance filing on June 16, 1964. It does not deny the allegation of the Movants that this filing was *ex parte* in nature. This fact gives support to Movants' claim that they obtained copies of the data submitted by South Texas for the first time after September 4, 1964. Under these circumstances the action that the Movants took with respect to this complicated matter on December 9, 1964, cannot be considered untimely. Clearly, Movants could not take appropriate action with respect to a particular situation until they had gained knowledge of its existence.

Sections 154.23 and 154.101 of the Commission's Regulations make it manifest that the "acceptance for filing of any tariff contract or part thereof is not to be considered as approval by the Commission" nor is it "to serve in lieu of any requirements under Section 7 of the Natural Gas Act." Since South Texas' Supplement 56 did not comply with and can be shown to be inconsistent with ordering paragraph (D) of the Commission's Opinion No. 362, its mere acceptance for filing cannot serve as an amendment to the certificate which had been issued to it in Opinion No. 362. (*Cf. Sunray Mid-Continent Oil Company* v. *F.P.C.*, 290 F. 2d 552 (1961), and *Pan American Petroleum Corporation*, 31 FPC 616).

The facts disclosed by the Movants show that they had not been advised of the course of events that had transpired commencing with the acceptance for filing of Supplement No. 56 of South Texas' FPC Gas Rate Schedule No. 2 on June 16, 1964, and the Secretary's letter dated July 15, 1964, advising that the latter filing constituted a satisfactory compliance with paragraph (D). The facts disclosed by the Movants also show that the filing made by South Texas on June 16, 1964, was, contrary to the Secretary's letter of July 15, 1964, not in compliance with paragraph (D) of the Commission's Opinion No. 362.

The Commission finds:

(1) The motion filed by The Consolidated Edison Company, *et al.*, Long Island Lighting Company, and Brooklyn Union Gas Company on December 9, 1964, in connection with the aforementioned matter, was timely and appropriate.

(2) The filing made by South Texas Natural Gas Gathering Company of Supplement No. 56 to its FPC Gas Rate Schedule No. 2 on June 16, 1964, entitled "Notice of Change in Rate For Sale of Gas by South Texas Natural Gas

Gathering Company to Transcontinental Gas Pipe Line Corporation" did not comply with the requirements of paragraph (D) of Opinion No. 362.

(3) The public convenience and necessity requires that South Texas Natural Gas Gathering Company be required to file an appropriate rate schedule that is consistent with paragraph (D) of Opinion No. 362, as hereinbefore described, and that South Texas make appropriate refunds consistent with this amended filing as of the date specified in Opinion No. 362.

The Commission orders:

(A) South Texas Natural Gas Gathering Company shall within 90 days from the issuance of this order file an amended rate schedule that is consistent with paragraph (D) of Opinion No. 362.

(B) South Texas Natural Gas Gathering Company shall make appropriate refunds to Transco from this amended filing as of the date specified in Opinion No. 362.

(C) Supplement No. 56 to South Texas Natural Gas Gathering Company FPC Gas Rate Schedule No. 2 is rejected.

(D) The letter of the Secretary dated July 15, 1964, accepting the above supplement as constituting compliance with paragraph (D) of Opinion No. 362 is rescinded.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr. and Carl E. Bagge.

TRANSCONTINENTAL GAS PIPE LINE CORPORATION, DOCKET NO. CP66-91

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued November 19, 1965)

On October 5, 1965, Transcontinental Gas Pipe Line Corporation (Applicant) filed in Docket No. CP66-91 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing additional firm pipeline service to eight existing customers commencing with the 1965-66 winter season, all as more fully set forth in the application in this proceeding.

Specifically, Applicant proposes to sell and deliver the following additional quantities of natural gas:

Customer	Rate schedule	Mcf per day at 14.7 psia
Eastern Shore Natural Gas Co	CD-3	2,000
Avis Gas Co	OG-3	777
Fort Hill Natural Gas Authority	CD-2	500
Butler, Ala., Town of	G-1	250
Lawrenceville, Ga., City of	G-1	200
Roanoke, Ala., City of	G-1	110
Royston, Ga., City of	G-1	60
Sugar Hill, Ga., Town of	G-1	25
Total proposed additional firm service		3,922

Applicant states that with the exception of Eastern Shore, all of the above customers will require the additional gas commencing November 1965; in the case of Eastern Shore of the proposed additional quantities, 1,350 Mcf will

be required commencing January 1, 1966, with the remaining 650 Mcf commencing May 1, 1966.

No additional facilities will be required in order to render the proposed service.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on November 17, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Transcontinental Gas Pipe Line Corporation, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of November 18, 1948, in Docket No. G–1143 (7 FPC 139).

(2) The sales and delivery of natural gas hereinbefore described, as more fully described in the application in this proceeding, are to be made in interstate commerce, subject to the jurisdiction of the Commission, and are, therefore, subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The proposed sales and delivery of natural gas by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued authorizing Applicant, Transcontinental Gas Pipe Line Corporation, to sell and deliver natural gas as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3) and (e) of Section 157.20 of such Regulations.

(C) The sales and delivery of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within six months from the date on which this order issues.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr. and Carl E. Bagge.

PERRY R. BASS (OPERATOR), ET AL., DOCKET NO. RI66-174

ORDER GRANTING APPLICATION FOR REHEARING, AND PROVIDING FOR HEARING ON AND SUSPENSION OF PROPOSED CHANGE IN RATE

(Issued November 22, 1965)

Perry R. Bass (Operator), *et al.* (Bass) filed an application for rehearing on October 25, 1965, of the Commission's undocketed order issued September 23, 1965, rejecting a proposed rate increase from 16.0¢ to 17.0¢ per Mcf[1] tendered on August 24, 1965, by Bass for the sale of residue gas from gas-well gas to El Paso Natural Gas Company under its FPC Gas Rate Schedule No. 1 in the Permian Basin Area of Texas. The contract involved here was executed on December 16, 1961, and thus covers a sale for new gas under Opinion No. 468, 34 FPC 159. The proposed rate of Bass, which exceeds the applicable just and reasonable rate ceilings determined in Opinion No. 468 for the sale of gas in the Permian Basin Area, was rejected for the reasons set forth in the order issued August 26, 1965, in *Socony Mobil Oil Company, Inc. (Operator), et al.*, 34 FPC 595.

On October 20, 1965, subsequent to the issuance of our rejection order, the Tenth Circuit in *Skelly Oil Co.* v. *F.P.C.* (CA10 No. 8385, *et al.*) stayed through January 20, 1966, the effectiveness of Opinion Nos. 468 and 468-A (34 FPC 1068) as to Skelly, Phillips and Warren. The Court's order further provided that any member of the Court may grant a similar stay if other petitions for review are filed in or transferred to that Court. Argument was also set for January 7, 1966 on the question of further stay.

Bass in Case No. 23123 has filed in the Fifth Circuit a petition for review of Opinion Nos. 468 and 468-A together with a motion to transfer its appeal to the Tenth Circuit. Bass also filed a motion for stay in the Tenth Circuit. Under these circumstances, it is appropriate to grant Bass' application for rehearing and to suspend its proposed increase for five months from the time it would have become effective had it not been rejected (*i.e.*, September 24, 1965). However, we wish to make it clear that we will reject this increase *ab initio* in the event the stay is dissolved or Opinion Nos. 468 and 468-A are upheld upon judicial review.

The proposed changed rate and charge may be unjust, unreasonable, unduly discriminatory, or preferential, or otherwise unlawful.

The Commission finds:

It is in the public interest and consistent with the Natural Gas Act that the Commission enter upon a hearing regarding the lawfulness of the proposed change, and that Supplement No. 1 to Bass' FPC Gas Rate Schedule No. 1 herein be suspended and its use be deferred as ordered below.

The Commission orders:

(A) Under the Natural Gas Act, particularly Sections 4 and 15, the Regulations pertaining thereto [18 CFR, Chapter I], and the Commission's Rules

---

[1] The proposed increased rate is designated herein as Supplement No. 1 to Bass' FPC Gas Rate Schedule No. 1. Details of the proposed increase are set forth in Appendix A hereof.

of Practice and Procedure, a public hearing shall be held concerning the lawfulness of the change proposed by Bass.

(B) Pending hearing and decision thereon, Supplement No. 1 to Bass' FPC Gas Rate Schedule No. 1 is suspended and its use deferred until February 24, 1966, and thereafter until made effective as prescribed by the Natural Gas Act.

(C) Unless otherwise ordered by the Commission, neither the suspended supplement, nor the rate schedule sought to be altered, shall be changed until disposition of this proceeding or expiration of the suspension period.

(D) Notices of intervention or petitions to intervene may be filed with the Federal Power Commission, Washington, D.C. 20426, in accordance with the Rules of Practice and Procedure [18 CFR 1.8 and 1.37(f)] on or before January 4, 1966.

LANDS WITHDRAWN IN POWER SITE RESERVE NO. 117, DOCKET NO. DA–578—IDAHO, CITY OF IDAHO FALLS

ORDER DENYING APPLICATION UNDER SECTION 24 OF THE FEDERAL POWER ACT

(Issued November 22, 1965)

Application (Idaho 016238) was filed by City of Idaho Falls (Applicant), Idaho, through the Bureau of Land Management, Boise, Idaho, seeking a determination under Section 24 of the Federal Power Act for the purpose of restoring the following described lands of the United States withdrawn for power purposes:

Boise Meridian, Idaho

T. 3 N., R. 37 E., section 25, lot 3 (comprising 9.86 acres)

Applicant desires to acquire the lands under the Act of June 14, 1926 (44 Stat. 791) to be used as a public recreational area and overnight camp grounds for the Boy Scout program and to maintain ready access to Applicant's unlicensed and otherwise unauthorized hydroelectric power project occupying parts of the lands.

The lands, which lie on the left bank of the Snake River 5 miles upstream from the City of Idaho Falls, are withdrawn in Power Site Reserve No. 117 of July 2, 1910.

On January 31, 1963, in Docket No. DA–561–Idaho, the Commission denied an application by the Bureau of Land Management, Department of the Interior, for revocation of power withdrawals or a determination under Section 24 of the Federal Power Act because of the use of portions of the subject lands by Applicant herein for power purposes. It appears that applicant is continuing to operate and maintain hydroelectric facilities on portions of the subject lands, in violation of Section 23(b) of the Federal Power Act (16 U.S.C. 817).

The Commission expects that the Applicant will promptly take the necessary steps to file an application for a license for its project. In the meantime, however, the proposed use of the land appears to be consistent with an appropriate recreational plan at such a licensed project and the Commission has no objection, therefore, to the issuance of a special land-use permit by the Department of the Interior to Applicant for other than hydroelectric purposes, pursuant to the letter agreement dated September 29, 1950, between this agency and the Bureau of Land Management, Department of the Interior, subject to the following condition:

> The permittee further agrees that the United States, its permittees or licensees, for purposes of power development, shall not be held liable for any damages to crops, buildings or other improvements of the permittee resulting from the construction, operation or maintenance of any power project works upon the lands herein described.

The Commission finds:

The subject lands are valuable for power purposes.

The Commission orders:

The aforesaid application is hereby denied.

OPINION NO. 476-A

SINCLAIR OIL & GAS COMPANY, ET AL., DOCKET NO. G-16760, ET AL.*

MEMORANDUM OPINION AND ORDER MODIFYING OPINION NO. 476, DENYING APPLICATIONS FOR REHEARING, AND GRANTING IN PART MOTION FOR STAY

(Issued November 22, 1965)

Syllabus

Upon reconsideration, Commission *makes minor modifications* in prior opinion; *grants* motion for stay, in part; *denies* applications for rehearing and otherwise *affirms* said opinion.

Commissioner Black *dissenting.*

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., David S. Black and Carl E. Bagge.

On September 22, 1965, 34 FPC 930, the Commission issued Opinion No. 476 and accompanying order in the above-entitled proceeding. Applications for rehearing of this Opinion and order have been filed under Section 19 of the Natural Gas Act by the following producers: Sinclair Oil & Gas Company, *et al.*, Docket No. G-16760; Lamar Hunt (Operator), *et al.*, Docket No. CI61-1736; MPS Production Co. (Operator), *et al.*, Docket No. CI62-314; Shell Oil Company, Docket No. CI62-653; The Jupiter Corporation (Operator), *et al.*, Docket No. CI62-698; Continental Oil Company, Docket No. CI62-961; and H. D. Bruns (Operator), *et al.*, Docket No. CI63-820. The following interveners have also filed applications for rehearing: Public Service Commission of the State of New York, Long Island Lighting Company, Philadelphia Electric Company, and the Philadelphia Gas Works Division of The United Gas Improvement Company. Lamar Hunt has moved to stay the Commission's order.

The Commission provided in Opinion No. 476 and order that permanent certificates of public convenience and necessity under Section 7 of the Natural Gas Act be granted to certain named producers in Texas Railroad Commission District No. 2, conditioned on a price no greater than 15.0 cents per Mcf at 14.65 psia for those producers whose initial contracts were executed on or before September 28, 1960, and on a price no greater than 16.0 cents per Mcf at 14.65 psia for those producers whose initial contracts were executed after September 28, 1960. The certificates were conditioned to provide for a moratorium on the filing of all price increases in excess of 18 cents per Mcf at 14.65 psia, inclusive of tax reimbursement, pending the issuance of a final decision in the Texas Gulf Coast Area Rate Proceeding, Docket No. AR64-2, or until January 1, 1968, whichever is earlier, and for possible revision of the take-or-pay for requirement in each contract on the basis of the final order in the Docket No. R-199 proceeding. Also, with respect to those dockets where the temporary authorization had a refund condition, the order requires the computation of and report of the amount of the refund and its sequestration pending further Commission direction. Where the temporary authorizations had no refund condition, the question as to a refund order was deferred.

In general, the applications for rehearing advance the same arguments and the same citations of authority which were relied upon in the original presentations before the presiding examiner or in the exceptions to the examiner's initial decision. These contentions were carefully considered by the Commis-

* For additional parties see Opinion No. 476 and order issued September 22, 1965, 34 FPC 930.

sion in its deliberations which culminated in Opinion No. 476 and order. Upon full reconsideration the Commission is convinced that Opinion No. 476 and accompanying order are correct, and should be adhered to except for certain minor modifications explained below.

Shell Oil Company asserts that ordering paragraph (N) of Opinion No. 476, which requires Shell to file a supplement to its presently filed rate schedule, should not be applicable to its Rate Schedule 264 (Docket No. CI62–653) for the reason that Shell has filed and is collecting a rate increase on this Rate Schedule, designated RI62–509, which is now in hearing as a part of the Texas Gulf Coast Area Rate Case, Docket No. AR64–2. It is our view that supplemental rate schedule filings should be made by all producers whose initial rates exceed the levels found proper here in order to establish the appropriate filed initial rate for each producer. In Shell's case, where a superseding rate has been permitted to go into effect, Shell may continue to charge the superseding rate. Since it does not appear that Shell has a refund provision in its temporary certificates, the initial rates prescribed here will only be effective prospectively as to Shell, and then only if no superseding rates have become effective. Should it be determined that refunds are proper after completion of the proceedings suggested in paragraph (I), Shell will be ordered to make a further rate filing putting the prescribed initial rates in effect from the date of commencement of service.

Lamar Hunt has coupled his application for rehearing with a motion for stay of ordering paragraphs (C), (J), and (N) of the order accompanying Opinion No. 476. Ordering paragraph (C) conditions the certificates with respect to price; paragraph (J) imposes the moratorium; and paragraph (N) provides for the filing of new rates. Consistent with our action in previous in-line proceedings the motion for stay should be granted as to paragraph (N). Stay of the other paragraphs is not warranted. In fact, stay of the moratorium provisions of paragraph (C) would defeat the very purpose for which the paragraph is included.

It may be further observed that the present consideration by the United States Supreme Court of the petition for writ of certiorari in *Callery Properties, Inc.* v. *F.P.C.*, 335 F. 2d 1004 (CA5–1964), does not require any specific stay with respect to the refund provisions in Opinion No. 476 and order since ordering paragraphs (F) through (H) merely provide that the producers, whose temporary authorizations contained refund provisions, shall sequester and retain the amount of the refund pending further order of the Commission. Ordering paragraph (I) defers consideration of refund conditions as to the other certificate holders and should be stayed pending a decision in *Callery* to avoid repeated brief filings.

It has been pointed out that Opinion No. 476 and accompanying order should be amended to reflect succession in interest by the following applicants:

(1) Producing Properties, Inc., Docket Nos. CI61–1236 and CI63–814, is now succeeded by Reserve Oil & Gas Company.

(2) H. B. Zachary Company, Gasoline Production Division, Docket No. CI62–1023, is now succeeded by Houston Natural Gas Production Company.

(3) Montego Oil Company (Operator), *et al.*, Docket No. CI63–790, is now succeeded by Southern Minerals Corporation.

It does not appear, however, that the above transactions imposed upon the successor companies' liability to assume the refund obligations for amounts sold prior to the succession. Accordingly, in each of these three instances, as well as in other cases where there has been a succession of interest in these proceedings, both the predecessors and the successors in interest shall be re-

tained in the proceeding under their respective docket numbers until the Commission has disposed of the applicable refund obligation.

It may further be noted that the temporary authorization of Tidewater Oil Company, Docket No. CI64-788, did not contain refund conditions, and accordingly that the name of this Company should not have been included in ordering paragraph (E). An appropriate deleting correction will be made to this paragraph.

The Commission further finds:

The assignments of error and grounds for rehearing set forth in the applications for rehearing filed in this proceeding present no fact or legal principles which would warrant any change or modification in the Commission's Opinion No. 476 and order except as specified below.

The Commission orders:

(A) The applications for rehearing filed by Sinclair Oil & Gas Company, *et al.*, Lamar Hunt (Operator), *et al.*, MPS Production Co. (Operator), *et al.*, Shell Oil Company, The Jupiter Corporation (Operator), *et al.*, Continental Oil Company, H. D. Bruns (Operator), *et al.*, the Public Service Commission of the State of New York, Long Island Lighting Company, Philadelphia Electric Company, and the Philadelphia Gas Works Division of the United Gas Improvement Company are denied.

(B) Paragraph (E) is amended by deleting therefrom the following: "CI64-788, Tidewater Oil Company", and by adding thereto a new final sentence to read as follows:

In the event that judicial review of Opinion No. 476 and order is sought and the Commission's order is affirmed, each of the above-named applicants shall compute the additional amounts to be refunded to their respective purchasers, calculated as to principal and interest as described above from the date of this order until the date on which judicial review of this Opinion No. 476 and order becomes final, and within 90 days from this latter date each applicant shall submit a report of such additional refund to the Commission, and serve a copy on his respective purchaser, subject to the requirements and conditions set forth in the preceding sentence.

(C) Paragraph (I) is amended to read as follows:

The decision as to whether refunds should be ordered as a condition to the remaining certificates herein issued is, in accordance with the Commission's order issued herein on October 5, 1964, deferred to the further order of the Commission, which order shall be postponed until after the decision of the United States Supreme Court in *U.G.I., et al.* v. *Callery Properties, Inc., et al.*, S. Ct. October Term 1964, Nos. 21, *et al.*, becomes final.*

(D) Paragraph (N) is amended to read as follows:

Within 30 days from the date of issuance of this order, each of the applicants receiving certificates in paragraph (A) above who now have rate schedules on these dockets filed with the Commission shall file supplements to such presently filed rate schedules reflecting the conditioned price as the initial price in lieu of the initial price provided in the contract. The filings of these producers, setting forth the initial rate here prescribed, shall be effective from the date of this order unless lawfully changed in the manner provided by the Natural Gas Act, and subject to any lawful changes which are ordered in other proceedings before the Commission. The notice provisions of Section 154.94(f) of the Commission's Regulations Under the Natural Gas Act are waived insofar as they apply to the reductions in rates hereby ordered.

*380 U.S. 931 (1965).

(E) The date for making the filings required by Paragraph (N) is postponed until 60 days after judicial review of Opinion No. 476 and order becomes final.

(F) In all other respects the motion for stay filed by Lamar Hunt (Operator), *et al.*, is denied.

(G) The name of applicant, Producing Properties, Inc., Docket Nos. CI61–1236 and CI63–814, is amended to read: Producing Properties, Inc., and its successor, Reserve Oil & Gas Company.

(H) The name of applicant, H. B. Zachry Company, Gasoline Production Division, Docket No. CI62–1023, is amended to read: H. B. Zachry Company, Gasoline Production Division, and its successor, Houston Natural Gas Production Company.

(I) The name of applicant, Montego Oil Company (Operator), *et al.*, Docket No. CI63–790, is amended to read: Montego Oil Company (Operator), *et al.*, and its successor, Southern Minerals Corporation.

Commissioner Black *dissenting* as stated in Opinion No. 476 issued September 22, 1965, 34 FPC at p. 945.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr. and Carl E. Bagge.

BEN BOLT GATHERING COMPANY, CP65–313; SOUTH TEXAS NATURAL GAS GATHERING COMPANY, CP65–314; COASTAL STATES GAS PRODUCING COMPANY, G–2557, ET AL.; NATURAL GAS PIPELINE COMPANY OF AMERICA, CP65–318

FINDINGS AND ORDER AFTER STATUTORY HEARING AMENDING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY, PERMITTING AND APPROVING ABANDONMENT, CANCELLING RELATED RATE SCHEDULES AND ACCEPTING FOR FILING AN EXCHANGE AGREEMENT AS A RATE SCHEDULE

(Issued November 23, 1965)

On April 5, 1965, Ben Bolt Gathering Company (Ben Bolt) filed in Docket No. CP65–313 an application pursuant to Section 7(b) of the Natural Gas Act for permission and approval to abandon the transportation and sale of natural gas to Natural Gas Pipeline Company of America at two delivery points located in Nueces and San Patricio Counties, Texas, all as more fully set forth in the said application to abandon.

On April 6, 1965, Coastal States Gas Producing Company (Coastal) filed in Docket No. G–2557, *et al.*, an application to amend the orders of the Commission issued in Docket No. G–2557 on June 15, 1955, as amended on June 27, 1960, and May 21, 1965, issued in Docket No. G–9870 on January 7, 1958, and issued in Docket No. G–17477 on June 19, 1963, which orders authorized sales of natural gas by Coastal from production in the Orange Grove Field, Jim Wells County, Texas, the Riverside Field, San Patricio County, Texas, and Reynolds Ranch Field, Jim Wells County, Texas, to Natural Gas Pipeline Company of America. By the application to amend Coastal seeks authorization to continue the deliveries of natural gas to Natural Gas Pipeline Company of America under the terms of a gas exchange agreement dated January 1, 1965, rather than under separate sales contracts covering the three fields, and filed as Coastal States Gas Producing Company's FPC Gas Rate Schedule Nos. 24, 29 and 55 (formerly Orange Grove Gas Gathering Company's FPC Gas Rate Schedule No. 1), as more fully set forth in the said application to amend.

On April 6, 1965, Natural Gas Pipeline Company of America (Natural) filed in Docket No. CP65–318 an application pursuant to Section 7(b) of the Natural Gas Act for permission and approval to abandon two side taps on its 26-inch pipeline and two gas purchase meter stations located in Nueces and San Patricio Counties, Texas, respectively, used exclusively for the receipt of natural gas from Ben Bolt as more fully set forth in the application to abandon.

Ben Bolt proposes to abandon the transportation and sale of natural gas to Natural for the reason that the daily delivery quantity based on 1 Mcf for each 8,000 Mcf of reserves, has decreased from 10,000 Mcf per day in 1960 to less than 3,000 Mcf per day at the present time, and resulted in a loss of $904.00 to Ben Bolt during the year 1964. Ben Bolt states that its reserves dedicated to Natural under the contract dated April 20, 1959, are now estimated to be 24,000,000 Mcf. Ben Bolt proposes to sell and deliver the remaining volumes of gas to its affiliate, Coastal States Gas Producing Company for sale in the intrastate market.

Coastal, an independent producer affiliate of Ben Bolt and South Texas Natural Gas Gathering Company, states that the reserves dedicated to the three contracts covering production from the Orange Grove Field, the Riverside Field and the Reynolds Ranch Field have never attained the volumes that were estimated to be in place at the time the contracts were executed (between June 1954 and September 1956), and that the reserves are presently depleted to the point (8,000,000 Mcf) that deliveries can no longer be made economically pursuant to the contract terms (which provide for 1 Mcf per day per 8,000 Mcf of reserves). Coastal asserts that under the terms of the proposed exchange agreement it would be able to withdraw the gas at a much faster rate (maximum of 8,000 Mcf per day) and thereby make the sale economically worthwhile. The exchange agreement provides that the deliveries shall continue to Natural from the Orange Grove and Reynolds Ranch Fields, in Jim Wells County, and from the Riverside Field, in San Patricio County, Texas (Texas District No. 4). Natural will return an equivalent volume of gas to Coastal in the Hagist Ranch Field, in Duval County, Texas, also in Texas District No. 4.

Coastal has filed an agreement whereby Natural's daily take requirement will be reduced from 4,500 Mcf to 3,500 Mcf under the contract comprising Coastal's FPC Gas Rate Schedule No. 7, for sales in the Duval Area. In addition the parties have agreed to exclude a volume of 8,000,000 Mcf of recoverable reserves from any future reserves redetermination during the life of the contract, thereby reducing Natural's required daily take still further under the subject contract at that time.

South Texas Natural Gas Gathering Company (South Texas), an affiliate of Ben Bolt, filed on April 5, 1965, an application in Docket No. CP65–314 pursuant to Section 7(c) of the Natural Gas Act authorizing South Texas to sell an additional 3,000 Mcf of natural gas daily to Natural to replace the volumes of natural gas presently being delivered to Natural by Ben Bolt, and proposed by Ben Bolt to be abandoned, as set forth in the application filed in Docket No. CP65–313.

In a tariff supplement filed September 21, 1965, South Texas proposes to replace the reserves to be abandoned by Ben Bolt by dedicating equivalent reserves (24,000,000 Mcf) to Natural under the above mentioned rate schedule No. 1. South Texas and Natural have agreed that the above dedication will not increase the daily quantity of gas which Natural is required to purchase unless such increase is required by a reserve study made subsequent to the date of the supplement and in accordance with the terms and conditions of

the contract. South Texas proposes that the tariff supplement be made effective on the "Date of Authorization".

By letter received October 27, 1965, South Texas agreed that until such time as there shall be a redetermination of gas reserves pursuant to the gas sales contract dated November 1, 1958, between Natural and South Texas (South Texas' FPC Gas Rate Schedule No. 1) and South Texas is authorized by the Commission to increase its daily quantities of gas sales as a result of such reserve redetermination, any gas prepayments which South Texas might incur under the gas purchase contract of August 7, 1964, will be absorbed by South Texas, and it will not use such prepayments as the basis for any future rate increase.

The subject reserves are those attributable to a gas purchase contract dated August 7, 1964, between South Texas, as Purchaser and Mokeen Oil Company and Coastal, as Seller; under which contract South Texas is required to take or pay for gas at the rate of 1 Mcf per day for each 8,000 Mcf of reserves. A contract quantity of 3,000 Mcf per day would be associated with the proposed 24,000,000 Mcf reserve addition.

The current proposal by South Texas would replace the reserves abandoned by Ben Bolt with the added advantage to Natural that its minimum daily purchase obligation under the South Texas contract will not be increased. The sale by South Texas is at 19.5¢ per Mcf or 0.5¢ per Mcf less than the Ben Bolt price to Natural; however, Natural must haul the South Texas gas approximately 50 miles farther. South Texas' FPC Gas Rate Schedule No. 1 specifically provides for the addition of reserves as now proposed. This rate schedule was a part of the certificate application in Docket No. G–17050 in which South Texas was originally authorized to sell and deliver a contract quantity of 30,000 Mcf per day to Natural at Natural's La Gloria meter station in Jim Wells County, Texas.

After due notice, no petition to intervene, notice of intervention other than the notice filed by the Public Service Commission of the State of New York in Docket No. CP65–314, or protest to the granting of the respective applications has been filed.

Upon the filing of a notice of intervention by the Public Service Commission of the State of New York in Docket No. CP65–314 on May 10, 1965, South Texas, on August 12, 1965, filed a notice of withdrawal of its said application in Docket No. CP65–314. The withdrawal became effective on September 10, 1965, and the application is not now pending.

At a hearing held on November 17, 1965, the Commission on its own motion received and made a part of the record in these proceedings all evidence, including the applications and exhibits, submitted in support of the authorizations sought, and upon consideration of the record,

The Commission finds:

(1) Applicant, Ben Bolt Gathering Company, a Texas corporation having its principal place of business in Corpus Christi, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of December 12, 1961, in Docket No. G–20032 (26 FPC 825).

(2) Applicant, Coastal States Gas Producing Company, having its principal place of business in Corpus Christi, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of July 14, 1965, in Docket No. CI65–1203.

(3) Applicant, Natural Gas Pipeline Company of America, a Delaware corporation having its principal place of business in Chicago, Illinois, is a "nat-

ural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of October 13, 1942, in Docket No. G–253 (3 FPC 830).

(4) The transportation and sale of natural gas proposed to be abandoned by Ben Bolt, and facilities proposed to be abandoned by Natural as hereinbefore described and as more fully described in the applications filed in these proceedings, are subject to the jurisdiction of the Commission, and such abandonments are subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(5) The proposed abandonment of service by Ben Bolt and of facilities by Natural are permitted by the public convenience and necessity and permission and approval therefor should be granted as hereinafter ordered.

(6) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order issued in Docket No. G–2557 on June 15, 1955, as amended on June 27, 1960, and May 21, 1965, in Docket No. G–9870 on January 7, 1958, and issued in Docket No. G–17477 on June 19, 1963, be amended as hereinafter ordered.

(7) The public convenience and necessity requires that Coastal's FPC Gas Rate Schedule Nos. 24, 29 and 55 be cancelled, said cancellation to be effective upon the date of the issuance of this order.

(8) Coastal's gas exchange agreement dated January 1, 1965, should be accepted for filing as a rate schedule to become effective on the day this order issues.

The Commission orders:

(A) Permission for and approval of the abandonment of transportation and sale of natural gas by Ben Bolt, and of facilities by Natural, as hereinbefore described, and as more fully described in the applications filed herein by Ben Bolt and Natural are granted.

(B) The Commission's order issued in Docket No. G–2557 on June 15, 1955, as amended on June 27, 1960, and May 21, 1965, in Docket No. G–9870 on January 7, 1958, and issued in Docket No. G–17477 on June 19, 1963 is amended to reflect (1) the substitution of the exchange agreement of Coastal dated January 1, 1965, for the contracts filed as Coastal's FPC Gas Rate Schedule Nos. 24, 29 and 55, and (2) authorization for the continued deliveries of natural gas to Natural in accordance with the said exchange agreement.

(C) Coastal's FPC Gas Rate Schedule Nos. 24, 29 and 55 are cancelled and the Gas Exchange Agreement dated January 1, 1965, is accepted for filing as a rate schedule in lieu of FPC Gas Rate Schedule Nos. 24, 29 and 55, effective on the date of issuance of this order.

(D) South Texas proposed tariff supplement to its FPC Gas Rate Schedule No. 1 be accepted for filing effective on the date of issuance of this order.

(E) Until such time as there shall be a redetermination of gas reserves pursuant to the gas sales contract dated Noveber 1, 1958, between Natural and South Texas is authorized by the Commission to increase its daily quantities of gas sales as a result of such reserve redetermination, any gas prepayments which South Texas might incur under the gas purchase contract of August 7, 1964, will be absorbed by South Texas, and it will not use such prepayment as the basis for any future rate increase.

(F) In all other respects the orders of the Commission referred to in paragraph (B) above shall remain in full force and effect.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr. and Carl E. Bagge.

MONTANA-DAKOTA UTILITIES CO., DOCKET NO. CP65-108

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued November 24, 1965)

On October 26, 1964, Montana-Dakota Utilities Co. (Applicant) filed in Docket No. CP65-108 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of natural gas facilities and the sale of natural gas, as more fully set forth in the application.

Applicant sought authorization to construct and operate a gas measurement station on its Riverton Dome to Worland, Wyoming, transmission line in Hot Springs County, Wyoming, to meter natural gas to be sold to Wyoming Gas Company (Wyoming Gas) for resale and distribution in Thermopolis and East Thermopolis, Wyoming. The estimated annual and peak day sales for the initial three year period of operations are as follows:

	First year	Second year	Third year
Annual (Mcf)	382,000	383,000	385,000
Peak day (Mcf)	3,250	3,250	3,250

By our letter dated April 30, 1965, Applicant's FPC Gas Tariff, Original Volume No. 4, was accepted for filing, effective December 1, 1964.

A temporary certificate of public convenience and necessity for the construction and operation of the measurement station and the sale of natural gas was issued by the Commission on November 24, 1964, and the temporary certificate was amended on December 22, 1964. Construction was begun on November 25, 1964, and completed on December 2, 1964. Service was commenced on December 2, 1964.

The actual cost of construction of the measurement station was $5,013, as shown in Applicant's filing of May 6, 1965, which filing was made pursuant to the requirements of paragraph (c)(4) of Section 157.20 of the Regulations under the Natural Gas Act. The construction was financed with internally generated funds. The project appears economically feasible.

Due notice of the filing of the application was published in the Federal Register on December 18, 1964 (29 F.R. 18023).

On October 28, 1964, Wyoming Gas filed a petition for leave to intervene which was in support of the application. Wyoming Gas explained in the petition that it sought natural gas service from Applicant due to the inability of another supplier to maintain service.

On December 23, 1964, the Public Service Commission of Wyoming filed a notice of intervention which was withdrawn on October 29, 1965.

No other protests, petitions to intervene, or notices of intervention have been filed in this proceeding.

At a hearing held on November 17, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Montana-Dakota Utilities Co., a Delaware corporation having its principal place of business in Minneapolis, Minnesota, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order issued March 22, 1946, in Docket Nos. G–220 and G–402 (5 FPC 64).

(2) The facilities hereinbefore described and as more fully described in the application in this proceeding are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof and the sale of natural gas for resale in interstate commerce by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the sale of natural gas, as described, by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraph (e) of Section 157.20 said Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to Applicant, Montana-Dakota Utilities Co., authorizing the construction and operation of the facilities and the sale of natural gas as hereinbefore described and as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraph (e) of Section 157.20 of said Regulations.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr. and Carl E. Bagge.

ORANGE AND ROCKLAND UTILITIES, INC., DOCKET NO. E-7246

ORDER AUTHORIZING THE ISSUANCE OF PROMISSORY NOTES

(Issued November 24, 1965)

Orange and Rockland Utilities, Inc. (Applicant), a New York corporation qualified to do business in the State of New Jersey with its principal business office at Nyack, New York, filed an application on September 27, 1965, with the Federal Power Commission, seeking an order pursuant to Section 204 of the Federal Power Act, authorizing the issuance of short-term unsecured Promissory Notes in the maximum principal amount of $15,000,000 outstanding at any one time.

According to the application, the Notes are to be issued from time to time, they are to have maturities of not more than one year from the dates thereof and in any event not later than December 31, 1966. They are to be issued to commercial banks located in the territory served by the Applicant and to banks in New York City and Boston. The interest rate on the notes will not be over one-quarter of one per cent in excess of the prime interest rate in New York City. This New York prime rate has been 4½% per annum since August 23, 1960.

Subject to obtaining authorization from the Public Service Commission of New York, the Applicant plans to pay off the Notes not later than December 31, 1966, from funds derived from the sale of long-term debt and/or equity securities and from retained earnings.

The application indicates that the purposes for which the Notes are to be issued are for the construction, completion, extension or improvement of certain electric and gas facilities. This program calls for an expenditure of $6.3 million during the remainder of 1965 and of $11.9 million during 1966. The main items in this program are $3.7 million for completion of a 170 mw unit at the Lovett Steam Plant, $1.7 million for construction of a service building at Spring Valley, New York, $5.9 million for extensions and replacements of electric lines and other additions and replacements of plant and property.

Written notice of the application has been given to the Public Service Commission of the State of New York, the Board of Public Utility Commissioners of the State of New Jersey, the Public Utilities Commission of Pennsylvania, and to the Governor of each of those States. Notice was also published in the Federal Register on October 15, 1965 (30 F.R. 13178), stating that any person desiring to be heard or to make any protest with reference to said application should on or before October 29, 1965, file with the Federal Power Commission, Washington, D.C. 20426, petitions or protests in accordance with the requirements of the Commission's Rules of Practice and Procedure (18 CFR 1.8 or 1.10). No protest or petition or request to be heard in opposition to the granting of the application has been received.

The Commission finds:

(1) Applicant, a corporation, is a public utility within the meaning of Section 204 of the Federal Power Act, subject to the jurisdiction of the Commission as heretofore described and set forth in the Commission's order issued July 22, 1965, *Orange and Rockland Utilities, Inc.*, Docket No. E–7230 (34 FPC 107).

(2) The proposed issuance of Promissory Notes in the aggregate principal amount of $15,000,000, all as described above, will constitute an issuance of securities within the purview of Section 204 of the Act.

(3) The proposed issuance of Promissory Notes in the aggregate principal amount of $15,000,000, all as described above, will be in excess of 5% of the par value of the other securities of Applicant, and, therefore, will not be exempt by virtue of Section 204(e) from the requirements of Section 204(a) of the Act.

(4) Applicant is not organized and operating in a State, under the laws of which the issue here involved is regulated by a State Commission within the meaning of Section 204(f) of the Act, and the proposed issuance is, therefore, not exempt by virtue of that Section from the requirements of Section 204 of the Act.

(5) The proposed issuance of Promissory Notes will be exempt from the competitive bidding requirements of Section 34.1a of the Commission's Regulations under the Federal Power Act by reason of paragraph 34.1a(a)(2).

(6) The proposed issuance of securities, as hereinafter authorized will be for a lawful object within the corporate purposes of Applicant and compatible with the public interest, which is appropriate for and consistent with the proper performance of service by Applicant as a public utility, and which will not impair its ability to perform that service, and is reasonably necessary and appropriate for such purposes.

The Commission orders:

(A) The proposed issuance of Promissory Notes in the aggregate principal amount of $15,000,000, outstanding at any one time, upon the terms and conditions and confined to the purposes set forth in the application, all as described above, is hereby authorized, subject to the provisions of this order.

(B) This authorization is expressly conditioned upon the final maturity of said notes being not later than December 31, 1966.

(C) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuation, estimates or determinations of cost or any other matter whatsoever now pending or which may come before this Commission.

(D) Nothing in this order shall be construed to imply any guarantee or obligation on the part of the United States in respect to any security to which this order relates.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

TURNBULL & ZOCH DRILLING CO. (OPERATOR), ET AL., DOCKET NO. G-17960, ET AL.

ORDER DENYING REHEARING AND GRANTING STAY

(Issued November 24, 1965)*

On September 30, 1965, the Commission issued its Opinion No. 478, 34 FPC 1001, in the above-entitled proceedings. A number of the parties, as listed below, have submitted applications for rehearing or reconsideration of our decision, the first application being filed on October 25.[1] In some cases motions for stay of certain actions required in the order accompanying Opinion No. 478 also have been submitted.[2] Additional filings presently made consist of briefs permitted by ordering paragraph (K) regarding the refund issue arising on the granting of the permanent certificates.

In our Opinion and order we determined the initial prices required by the public convenience and necessity for the sales involved in these proceedings. Stated briefly, certificates were granted under Section 7 of the Natural Gas Act for sales in Texas Railroad District No. 4 conditioned on an initial price of 15.0 cents per Mcf at 14.65 psia for the producers whose contracts

---

* For additional parties see Opinion No. 478 and order issued September 30, 1965, 34 FPC 1001.

[1] On October 25 by Shell Oil Co.; jointly by Austral Oil Co., Inc., Appell Petroleum Corp., *et al.*, and K. D. Owen, *et al;* on October 28 by Continental Oil Co. and Bright & Schiff; on October 29 by H J Mosser; jointly by the eastern distributors; The Public Service Commission of the State of New York; jointly by Blanco Oil Co. (Operator), *et al.* and Killam & Hurd; McCurdy & McCurdy; on November 1 by Jonnell Gas, Inc. (Operator), *et al.;* Phillips Petroleum Co.; and American Petrofina Company of Texas.

[2] Austral, *et al.*, Continental, Bright & Schiff, H. J. Mosser, Blanco, *et al.* and American Petrofina.

were executed before issuance of the Commission's Statement of General Policy No. 61–1 on September 28, 1960 (24 FPC 818), and 16.0 cents per Mcf at 14.65 psia for those producers whose contracts or supplements were dated after the Policy Statement. The certificates were further conditioned to provide for a moratorium on the filing of price increases above 18.0 cents per Mcf for a stated period, and for possible revision of the take-or-pay requirement in each contract on the basis of the final order in the proceeding in Docket No. R–199. In those dockets where the temporary authorization contained a refund condition, the certificate order initiates a procedure leading to the refunding of excess amounts theretofore collected. The question of whether refunds should be required in those cases where no refund condition was included in the temporary authorization was deferred. As noted, no determination has yet been made as to whether refunds will be required in such cases or as to the procedure to be followed in alleging and making proof of the equities with respect to any such refunds. Determinations also were made with respect to individual dockets presenting special circumstances. To the extent further consideration is warranted, they are dealt with subsequently in this order.

Our review of the present applications gives us no basis to question the basic in-line price determinations or to doubt their correctness. The decision is affirmed for the reasons stated by us and by the Examiner.

A question has been raised with regard to superseding rate filings. This same matter was considered in the recent order in the *H. L. Hawkins* proceeding issued November 17, 1965, *supra*, p. 1330. As therein stated, supplemental rate filings should be made by all producers whose initial rates exced the level found proper in order to establish the appropriate filed initial rate for each sale. Where no superseding rate has become effective the producer will commence charging the prescribed initial rate from the date the supplement is filed and continue to do so until that rate is changed in accordance with the Natural Gas Act. Where a superseding rate has gone into effect, the producer will continue to charge the superseding rate. Where no refund condition was included in the temporary authorization, the question of whether there should be a refund for the period prior to putting the superseding initial rate into effect will be determined upon completion of the proceeding contemplated by our October 5, 1964, 32 FPC 914, order and by paragraph (K) of Opinion No. 478. Ramada and Tenneco in Docket Nos. CI63–304 and CI63–334, respectively, should file rate schedule supplements showing a 16-cent initial rate effective from the date their service commenced. This is so since, in their cases, refund provisions were included in the temporary authorization and no superseding rates have been filed to replace the initial rates.

Jonnell Gas points out that its basic contract was executed before the Policy Statement but that successive contract amendments were made throughout 1961, 1962 and 1963 adding acreage to the initial commitment. In this circumstance we agreed with the producer, as intended by ordering paragraph (B), that each such contract amendment constitutes a separate gas sale for the purpose of applying the in-line price differential date of September 28, 1960. No modification of the order, beyond this clarification, is deemed necessary.

We have considered the other items raised in the applications for rehearing and are convinced that no change of the Opinion or order is warranted thereby.

Several producers have asked for stay of paragraphs (B), (E), (F) and (K) of our order until completion of judicial review. Paragraph (B) condi-

tions the certificates as to price; stay thereof is unnecessary. (E) provides for the filing of new rates; its requirements will be stayed pending judicial review. (F) provides the moratorium; stay will be denied, since to grant the request would defeat the very purpose for which the condition has been instituted. Paragraph (G) through (J), relating to the refunds by Ramada and Tenneco, need not be stayed because the amounts to be refunded will not be paid over until further order of the Commission. These producers may continue for the present to charge their temporarily authorized rates in line with the stay herein granted to paragraph (E). Within 90 days after judicial affirmance of the Opinion, they shall submit a supplemental report of the type specified in paragraph (G) applicable to the excess charges collected between the date of Opinion No. 478 and the effective date of the reduced rate filings. Paragraph (K) defers the "refund under non-refund conditioned temporaries" issue and permits briefs; the paragraph will be stayed until the Supreme Court's decision in *U.G.I., et al.* v. *Callery Properties, Inc., et al.*, S. Ct. Oct. Term 1964, Nos. 21, *et al.** Those who have already made filings in accordance with the original direction will be given opportunity to supplement them when paragraph (K) is made effective.

The Commission further finds:

(1) The assignments of error and grounds for rehearing set forth in the applications for rehearing filed in this proceeding present no facts or legal principles which would warrant any change or modification in the Commission's Opinion No. 478 and order except as specified below.

(2) Good cause exists for granting, in part, the motions for amendment to the order issued herein on September 30, 1965, so as to stay the actions required by paragraphs (E) and (K).

The Commission orders:

(A) Paragraph (E) is amended to read as follows:

Within 60 days from the date of issuance of this order each of the applicants receiving certificates in paragraph (A) hereof, whose proposed total initial price exceeds the limits set forth in paragraphs (B) or (C) hereof, shall file a supplement to its presently filed rate schedule, related to its respective application, reflecting the conditioned price as the total initial price in lieu of the higher initial price provided in the contract or amendment. The filings of Ramada Oil and Gas Company in Docket No. CI63-304 and Tenneco Oil Company in Docket No. CI63-334 shall be effective from the date delivery began until lawfully changed in the manner provided by the Natural Gas Act. The filings of all other producers shall set forth the initial rate here prescribed, and shall be effective from the date of this order until lawfully changed in the manner provided by the Natural Gas Act, and subject to any such lawful changes which are the subject of other proceedings before the Commission. In making the required filings, applicants need not comply with the detailed submittal provisions of Section 154.94(f) of the Regulations under the Natural Gas Act.

(B) Paragraph (G) is amended by adding the following at the end thereof:

Within 90 days after judicial affirmance of Opinion No. 478, Ramada and Tenneco shall submit a supplemental report applicable to the excess charges collected between the date of issuance of Opinion No. 478 and the effective date of issuance of Opinion No. 478 and the effective date of the reduced rate filings, with interest computed at the rate of 7 percent per annum to the date of such rate filings.

(C) The date for making the filings required by paragraph (E) is postponed until 60 days after judicial review of Opinion No. 478 and order

*380 U.S. 931 (1965).

becomes final. The time limit for filing initial briefs and statements of evidence as provided in paragraph (K) is stayed until 60 days after the decision of the United States Supreme Court in *U.G.I.* v. *Callery*, *supra*, becomes final. Those who have already filed such briefs or statements may file supplemental briefs and statements within the extended time limit prescribed here.

(D) In all other respect the applications for rehearing and motions for stay are denied.

Commissioner Ross *dissenting* for reasons stated in his dissent to Opinion No. 478 issued September 30, 1965, 34 FPC at p. 1013.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr. and Carl E. Bagge.

ALABAMA POWER COMPANY, PROJECT NO. 2165

ORDER DISMISSING APPLICATION FOR REHEARING AND STAYING ORDER

(Issued November 26, 1965)

Alabama Power Company (Applicant) by application filed October 28, 1965 requests that the Commission grant a rehearing of its September 28, 1965 Order Fixing Annual Charges for the use of a Government Dam, 34 FPC 971. That order assessed against Alabama Power Company an annual charge of $92,000 for the Company's use for power purposes of the Government's John Hollis Bankhead Dam on the Black Warrior River, Alabama.

In support of its application for rehearing, Applicant states that:

> in its preliminary review of the determinations and computations of the Commission Staff, [Applicant] has tentatively concluded that there are several areas of concern involving the determination of the amounts of the costs to be allocated and the allocation of power benefits in the assignments of such costs between the several functions.

However, Applicant declares that due to the involvement of certain of its key officials in the hearing before this Commission on Docket No. E-7183 no complete review and analysis by the Company of the Commission's September 28th order has yet been possible. According to Applicant, such a complete review and analysis can be undertaken only after the hearing on Docket No. E-7183 is completed and its key officials are released therefrom for other duties.

However, since the Applicant does not allege in its application for rehearing any error in the above-mentioned order as is required by Section 1.34(b) of the Commission's Rules of Practice and Procedure, we are unable to give favorable consideration to this application. But in view of the representations made by the Applicant indicating a need for more time to determine whether it considers the order in error, we deem it appropriate to stay the order so as to permit the Applicant additional time in which to study that order and to file another application for rehearing if it deems such action necessary.

The Commission finds:

It is appropriate and in the public interest under the circumstances recited above to dismiss Applicant's application for rehearing of the Commission's order issued September 28, 1965 in Project No. 2165, and to stay the Commission's order of September 28, 1965 in Project No. 2165 until December 31, 1965.

The Commission orders:

(A) The Alabama Power Company's application for rehearing of the Commission order issued September 28, 1965 in Project No. 2165 is hereby dismissed.

(B) The Commission's order issued September 28, 1965 in Project No. 2165 is hereby stayed until December 31, 1965.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr. and Carl E. Bagge.

CITY OF HERMANN, MISSOURI AND PANHANDLE EASTERN PIPE LINE COMPANY, DOCKET NO. CP66-24

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued November 26, 1965)

On July 21, 1965, The City of Hermann, Missouri (Applicant), filed in Docket No. CP66-24 an application, as supplemented on September 17, 1965, and October 29, 1965, and amended October 15, 1965, pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Panhandle Eastern Pipe Line Company (Respondent) to establish physical connection of its transportation facilities with the facilities proposed to be constructed by Applicant and to sell and deliver to Applicant volumes of natural gas for resale and distribution in the City of Hermann, in the incorporated communities of Middletown, New Florence, New Haven and Berger, and in the unincorporated areas of Big Springs and McKittrick, all in the State of Missouri, as more fully set forth in the application.

Applicant proposes to construct and operate a municipal gas distribution system within its own borders and approximately 45 miles of 6.5-inch O.D. lateral transmission pipeline extending southward from a point of interconnection with Respondent's main line in Audrain County, Missouri, to the town border of Applicant on the south bank of the Missouri River in Montgomery County, Missouri. Middletown, New Florence, Berger and New Haven will each construct and operate municipal gas distribution systems. New Haven will construct and operate approximately 15 miles of 4.5-inch O.D. transmission line extending south and east from Applicant to New Haven.

Applicant proposes to purchase from Respondent the requirements of its own customers as well as the requirements of the other named communities and rural customers. The volumes of gas required by Middletown and New Florence will be sold and delivered to them by Applicant at interconnections on its proposed lateral. The volumes to be sold to Berger and New Haven will be delivered to New Haven by Applicant at a point on Applicant's town border. New Haven will then transport its own gas and sell and deliver gas to Berger at the Berger town border. Rural customers in the Big Springs and McKittrick areas will be served by Applicant by means of short line taps extending from Applicant's proposed lateral.

The estimated peak day and annual requirements of each community and the transportation charges to be incurred by Middletown, New Florence, New Haven and Berger, are as follows:

	Year of operation			Transportation charge (cents per Mcf)
	1st	2d	3d	
Peak day (Mcf at 14.73 psia):				
Hermann (Applicant)	1,110	1,473	1,737	
Middletown	77	92	108	
New Florence	217	265	308	
New Haven	487	572	647	
Berger	74	127	142	
Total	1,965	2,529	2,942	
Annual (Mcf at 14.73 psia):				
Hermann (Applicant)	121,236	163,908	191,883	
Middletown	7,251	8,680	10,262	[1] 5.5
New Florence	20,701	25,421	29,354	[1] 11.7
New Haven	67,268	118,998	153,236	[2] 12.5
Berger	7,037	12,297	13,726	[3] 17.7
Total	223,493	329,304	398,461	

[1] To be paid to applicant.
[2] To be paid to applicant and includes gas transported for Berger.
[3] To be paid to New Haven.

Applicant will purchase gas from Respondent under Respondent's G-2 Rate Schedule with a monthly Demand Charge of $1.99 per Mcf and a commodity charge of 22.1 cents per Mcf. Middletown, New Florence and New Haven will each pay Applicant an amount equal to Applicant's cost of purchased gas plus the transportation charge shown above. Berger will pay for gas purchased from New Haven the cost of gas delivered to New Haven by Applicant plus the transportation charge shown above. The total amount paid for gas and the transportation thereof shall not in any case exceed 50 cents per Mcf.

Applicant's estimated cost of construction of the 45 miles of transmission lateral and the distribution system within its borders is $1,016,000. The total estimated cost to New Haven for its 15 miles of transmission line and distribution system is $324,000, and the costs to Middletown, New Florence and Berger for their distribution systems are estimated to be $35,000, $60,000, and $46,000, respectively.

These amounts are to be financed by gas revenue bonds to be issued separately by each municipality. Each such proposed issue has been approved by municipal elections. The project appears to be economically feasible.

Respondent was notified of the filing of the application by letter dated July 23, 1965. No answer has been received from Respondent.

Due notice of the filing of the application was published in the Federal Register on August 7, 1965 (30 F.R. 9891). No protest, petition to intervene or notice of intervention has been filed in this proceeding.

The Commission finds:

(1) Respondent, Panhandle Eastern Pipe Line Company, a Delaware corporation with its principal place of business in Kansas City, Missouri, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of September 23, 1942, issued in Docket Nos. G-200 and G-207 (3 FPC 273).

(2) Applicant is a municipality in the State of Missouri and is authorized to construct and operate facilites to distribute and sell natural gas to inhabitants and to communities along its system.

(3) It is necessary and desirable in the public interest that Respondent be directed to establish a physical connection of its transportation facilities with the facilities proposed to be constructed by Applicant and to sell and deliver up to 2,942 Mcf of natural gas per day to Applicant, as hereinbefore described

and as more fully set forth in the application, as hereinafter ordered and conditioned.

(4) The requirement that Respondent serve Applicant, as requested, will not place an undue burden upon Respondent nor impair its ability to render adequate service to its existing customers.

The Commission orders:

(A) Respondent is directed to establish a physical connection of its natural gas transmission system with the facilities to be constructed by Applicant and to sell and deliver up to 2,942 Mcf of natural gas per day to Applicant, all as hereinbefore described and as more fully described in the application.

(B) Applicant shall be prepared to receive natural gas from Respondent at the proposed new connection within one year from the date of this order.

(C) Respondent shall notify the Commission of the commencement of service within 10 days thereof.

(D) Respondent shall execute and file with the Commission a service agreement with Applicant in accordance with the Commission's Regulations.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr. and Carl E. Bagge.

IDAHO POWER COMPANY, PROJECT NO. 1971

ORDER AMENDING LICENSE (MAJOR)

(Issued November 26, 1965)

Idaho Power Company (Applicant) filed an application on June 7, 1965, with the Federal Power Commission seeking an amendment to its license for Project No. 1971 which would include the proposed Boise-Bench—Midpoint 230 kv transmission line in the license for that project. On August 30, 1965, the Secretary of the Interior (Intervener) filed a petition to intervene in opposition to the proposed amendment.

The proposed transmission line would be constructed at an estimated cost of $3,933,000, on the right-of-way 150 feet wide connecting at one end with the Boise-Bench substation and at the other end with the Midpoint transmission switching station, a distance of approximately 106.3 miles. The line would cross 71.078 miles of United States' land. It will provide additional capacity and will act as a back-up line for the existing Boise-Brady No. 3 and No. 4, 230 kv transmission lines.

Project No. 1971 consists of three developments on the Snake River in Idaho, the existing Brownlee and Oxbow developments and the Hells Canyon development which is now under construction. Presently, there are four authorized 230 kv transmission lines extended from the Brownlee switchyard to the Boise-Bench substation. From Boise-Bench there are presently two 230 kv lines which extend through the Midpoint switching station to a substation at Brady. All of these lines have been found to be primary transmission lines and all except one of the Boise-Bench-Midpoint-Brady segments have been included in the license for Project No. 1971. The afore-mentioned Boise Bench-Midpoint-Brady segment is included in the license for Project No. 1975.

The proposed 230 kv line would in general serve the same function as the two segments of the existing licensed transmission lines from Boise-Bench to Midpoint. It would become a new segment in a primary transmission line network which extends from the Brownlee switchyard through the Boise-Bench and Midpoint stations to Brady. The line will serve principally as a primary line transmitting energy from the three developments licensed as Project No. 1971 to its point of connection with other primary transmission lines at the Midpoint station. When some or all of the three developments of Project No. 1971 are generating power, this line will not carry any substantial amount of power from any other source.

The intervener alleges that the proposed transmission line is not a part of Project No. 1971 as "project" is defined in Section 3(11) of the Federal Power Act. Intervener's position as stated in its petition to intervene is that:

> For a transmission line to come within that definition, it must be a primary line * * * transmitting power therefrom [from the generating source] to the point of junction with the distribution system or with the interconnected primary transmission system.
>
> The generating source in this case is Brownlee-Oxbow-Hells Canyon. Unlike the transmission lines from Brownlee to Boise Bench (which were properly licensed as primary lines since they transmit power from the generating source to another point on the Company's transmission system), the Boise Bench-Midpoint line transmits power only from one intermediate point to another on the Company's transmission system.

The proposed line would serve as an additional connecting link between existing licensed primary transmission lines and will become part of the primary transmission system for Project No. 1971. The fact that the proposed line is only a segment in the primary transmission system of Project No. 1971 does not remove it from the Commission's licensing authority. Indeed, it would be anomalous to determine that the proposed segment of line, connecting at either end with other licensed primary lines, is not also subject to license.

The Intervener further requests in its petition that:

> In the event, however, that it should be decided that the proposed transmission line is a part of Project No. 1971 and subject to licensing by the Commission, the excess capacity provisions of Article 49 of the license, as provided in the Commission's Order of July 24, 1964, should also apply to this line.

Article 49[1] makes all lines which are licensed as part of Project No. 1971 subject to that Article. This includes future as well as presently licensed project lines.

In accordance with Section 11.21 of the Commission's Regulations under the Federal Power Act the proposed amendment of the license would increase the annual charges for occupancy of lands of the United States for transmission line purposes by: $852.94 or to a total $3,270.93, effective the first day of the month in which the order is issued.

The Commission finds:

The 230 kv transmission line which the Applicant proposes to construct from Boise-Bench to Midpoint will be a primary transmission line and part of Project No. 1971.

---

[1] 32 FPC 342.

The Commission orders:

(A) Paragraph (5)(a) of the license is amended by adding thereto the following:

BOISE-BENCH-MIDPOINT TRANSMISSION LINE

Exhibit	FPC No.	Showing
J	1971-207	General map.
K	1971-208, 209, 210	Detail map.

(B) Paragraph (5)(b)(4) of the license is amended by adding thereto the following:

(g) Boise-Bench Midpoint

A 230 kv single-circuit transmission line extending from the Boise-Bench substation approximately 106.3 miles in a southeasterly direction to the Midpoint switching station.

Exhibit M (dated 6-1-65) General Description and Specifications of Equipment.

(C) Sub-paragraph (b) of Article 44 of the license is further amended to read as follows:

(b) For the purpose of recompensing the United States for the use, occupancy and enjoyment of its lands used for transmission line right-of way only $2,417.99 effective July 24, 1964, and $3,270.93 effective the first day of the month in which the order amending license is issued.

(D) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an aplication shall constitute acceptance of this license amendment. In acknowledgement of the acceptance of this license amendment, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr. and Carl E. Bagge.

NEKOOSA-EDWARDS PAPER COMPANY, PROJECT NO. 2498

ORDER ISSUING LICENSE (MINOR)

(Issued November 26, 1965)

Application was filed on December 9, 1964 by Nekoosa-Edwards Paper Company (Applicant) of Port Edwards, Wisconsin, for a minor license under Section 4(e) of the Federal Power Act (Act) for constructed Project No. 2498, known as the Hewittville Hydroelectric Project, located on the Raquette River, in the Town of Potsdam, in St. Lawrence County, New York. No lands of the United States are affected by the project.

The project was originally constructed in or about 1870, and extensively reconstructed in 1902. Portions of the powerhouse which were destroyed by a fire were rebuilt in 1934.

The Secretary of the Army and the Chief of Engineers have advised that the plans of the project structures affecting navigation are satisfactory, and recommended for inclusion in any license for the project the terms and conditions in the interest of navigation usually included in licenses for such

projects. Such terms and conditions are set forth in Article 6 of attached Form L-9.

The Department of the Interior, in reporting on the application, advised that no special conditions in the interests of fish and wildlife are considered necessary for inclusion in any license for the project.

The Department of Health, Education, and Welfare has reported that the project has no adverse effects on water supply, pollution or water control, and none is anticipated.

By Article 13 herein, we are requiring Applicant to cooperate with State and local agencies in the interest of recreation in connection with the use of project lands and waters by the public.

In Docket No. DI-179, In the Matter of *Central New York Power Corporation*, the Commission in its Opinion No. 185, issued November 22, 1949, found that the "Raquette River, from its confluence with the St. Lawrence River to at least Piercefield at about mile 91 is a navigable waterway of the United States" (8 FPC 390). The Hewittville Project is located within this stretch of the Raquette River.

In accordance with the criteria set forth in our April 25, 1962 Opinion No. 357 and order issuing a license to Public Service Company of New Hampshire for Project No. 2288 (27 FPC 830), the license herein granted shall have an effective date of November 1, 1949 and a termination date of December 31, 1993.

In our order on rehearing issued February 17, 1965, in *Wisconsin Power & Light Company, Project No. 2347, et al.*, 33 FPC 275, we stated that we would have no objection to the issuance of licenses for minor projects without waiving Sections 14 and 15 of the Federal Power Act and the other provisions of the Act necessary to the effectuation of those sections, provided the minor project applications are timely supplemented pursuant to Section 4.50 of our Regulations under the Act (18 CFR § 4.50), which relates to applications for major projects. In the event the Applicant herein wishes a license in which those provisions of the Act are not waived it should so advise us within 30 days from the date of issuance of this order and file its supplemental application within 30 additional days thereafter.

The Commission finds:

(1) The project is situated on navigable waters of the United States.

(2) Applicant is a corporation organized under the laws of the State of Wisconsin, is authorized to do business in the State of New York, and has submitted satisfactory evidence of compliance with the requirements of all applicable State laws insofar as necessary to effectuate the purposes of a license for the project.

(3) Public notice of the filing of the application has been given. No protests or petitions to intervene have been received. No conflicting application is before the Commission.

(4) The project does not affect a Government dam, nor will the issuance of a license therefor, as hereinafter provided, affect the development of any water resources for public purposes which should be undertaken by the United States.

(5) Subject to the terms and conditions hereinafter imposed, the project will be best adapted to a comprehensive plan for improving or developing a waterway or waterways for the use or benefit of interstate or foreign commerce, for the improvement and utilization of water-power development, and for other beneficial public uses, including recreational purposes.

(6) The installed horsepower capacity of the project hereinafter authorized for the purpose of computing the capacity component of the administra-

tive annual charge is 1,770 horsepower, and the amount of annual charges, based on such capacity, to be paid under the license for the project, for the costs of administration of Part I of the Act is reasonable as hereinafter fixed and specified.

(7) It will be in the public interest to waive pursuant to Section 10(i) of the Act the terms and conditions contained in the following sections of Part I of the Act:

Section 4(b), except the second sentence thereof; 4(e), insofar as it relates to approval of plans by the Chief of Engineers and the Secretary of the Army and to public notice; 6, insofar as it relates to public notice and to the acceptance and expression in the license of terms and conditions of the Act which are hereinafter waived; 10(c), insofar as it relates to depreciation reserves; 10(d); 10(f); 14, except insofar as the power of condemnation is reserved; 15; 19; 20; 22; and 23(a), insofar as it relates to the determination of fair value.

The Commission orders:

(A) This license is hereby issued to Nekoosa-Edwards Paper Company of Port Edwards, Wisconsin, under Sections 4(e) and 10(i) of the Act, for a period effective as of November 1, 1949, and terminating December 31, 1993, for the continued operation and maintenance of Project No. 2498, located on the Raquette River, a navigable water of the United States, subject to the terms and conditions of the Act insofar as not expressly waived herein, which Act is incorporated herein by reference as a part of this license, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) Project No. 2498 consists of:

(i) All lands constituting the project area and enclosed by the project boundary or the limits of which are otherwise defined; and

(ii) A 550 foot long combination gravity and buttress dam, 19 feet above bedrock, with flashboards adding 2 feet to the height when used; six masonry flumes, each 18 feet deep and 13 feet wide, conveying water to six waterwheels; and a reinforced steel and concrete powerhouse with total installed capacity of 1,770 horsepower.

(C) This license is also subject to the terms and conditions set forth in Form L-9 (July 1, 1964) entiled, "Terms and Conditions of License for Constructed Minor Project Affecting Navigable Waters of the United States" (32 FPC 577), which terms and conditions, designated as Articles 1 through 11, are attached hereto, and made a part hereof, and subject to the following special conditions set forth herein as additional articles:

Article 12. The Licensee shall pay to the United States the following annual charge:

For the purpose of reimbursing the United States for the costs of administration of Part I of the Act for the period November 1, 1949, through March 31, 1962, a charge of $5.00 per annum, and effective as of April 1, 1962, an annual charge of $88.50.

Article 13. Licensee shall cooperate with State and local agencies in the development, and maintenance of access roads, areas, and facilities needed for full public utilization of outdoor recreation opportunity at the project consistent with the terms of the license and the operation of the project.

(D) The terms and conditions of the Act, which it has been found above to be in the public interest to waive, are hereby excluded from this license.

(E) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance

of this license. In acknowledgement of the acceptance of this license, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr. and Carl E. Bagge.

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP66-58

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued November 29, 1965)

On August 23, 1965, El Paso Natural Gas Company (Applicant) filed an application, as supplemented on September 13, 1965, in Docket No. CP66-58 pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain natural gas facilities to be utilized for the sale and delivery of natural gas to Tucson Gas & Electric Company (Tucson Gas) and Southern Union Gas Company (Southern Union), both existing resale customers of Applicant, as more fully set forth in the application.

For service to Southern Union, Applicant proposes to construct and operate 24.9 miles of 8⅝-inch O.D. pipeline looping the initial portion of the presently existing 43.7 miles of its Clovis-Farwell lateral pipeline which is located in Lamb and Parmer Counties, Texas, to permit increased sales of natural gas to Southern Union and to modify its Clovis meter station to accommodate the increased sales. Applicant has agreed to increase the firm delivery obligation to Southern Union from 22,300 Mcf per day to 32,000 Mcf per day and to increase the delivery pressure from 200 psig to 250 psig. The facilities will also be utilized to maintain the continuity of exchange deliveries currently being made to Pioneer Natural Gas Company by use of the Clovis-Farwell lateral.

For service to Tucson Gas, Applicant proposes to convert the mainline tap serving Tucson Gas in Pima County, Arizona, to a 2-inch orifice type measuring and regulating station. Applicant estimates that requirements of Tucson Gas for resale in the Avra Valley area of Arizona will increase from a yearly volume of 101,383 Mcf in 1964 to 172,788 Mcf in 1968. Applicant states that the proposed measuring and regulating station will allow it more efficient control over the volumes of gas sold to Tucson Gas.

The estimated cost of the facilities to serve Southern Union is $487,000, and the cost of the facilities to serve Tucson Gas is $7,700. These costs will be financed by Applicant out of available working funds. The projects appear to be economically feasible.

Due notice of the filing of the application was published in the Federal Register on September 4, 1965 (30 F.R. 11356). No protest, petition to intervene, or notice of intervention has been filed in this proceeding.

At a hearing held on November 24, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, El Paso Natural Gas Company, a Delaware corporation having its principal place of business in El Paso, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order issued on October 29, 1942, in Docket Nos. G–242 and G–257 (3 FPC 851).

(2) The facilities hereinbefore described and as more fully described in the application in this proceeding are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of said Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to Applicant, El Paso Natural Gas Company, authorizing the construction and operation of facilities as hereinbefore described and as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities authorized by this order shall be completed and placed in actual operation and the transportation of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within six months from the date of this order.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr. and Carl E. Bagge.

MIDWESTERN GAS TRANSMISSION COMPANY, DOCKET NO. CP66–15; TENNESSEE GAS TRANSMISSION COMPANY, DOCKET NO. CP66–25

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued November 29, 1965)

On July 22, 1965, Tennessee Gas Transmission Company (Tennessee) filed in Docket No. CP66–25 an application pursuant to Section 7(c) of the Natural

Gas Act for a certificate of public convenience and necessity authorizing the sale and delivery of an additional 1,000,000 Mcf (14.73 psia) of natural gas to Midwestern Gas Transmission Company (Midwestern) between November 1, 1965 and April 30, 1966, under Tennessee's existing FPC Temporary Winter Service (TWS) rate schedule, all as more fully set forth in the application.

Tennessee's proposed additional service is necessary to provide Midwestern with a gas supply for additional service which Midwestern proposes to render during the 1965–66 winter season to two of its southern system customers, Northern Illinois Gas Company (Northern) and Peoples Gas Light and Coke Company (Peoples).

Tennessee proposes to sell and deliver a temporary daily quantity of 20,000 Mcf to Midwestern at a rate of 58.37 cents per Mcf. The proposed service is firm, taking precedence after Tennessee's regular firm service and before service on an interruptible, temporary or emergency basis. Such service may be curtailed when it would impair Tennessee's ability to fulfill its obligations to render its regular firm service.

On July 16, 1965, Midwestern filed in Docket No. CP66–15 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the sale and delivery of an additional 500,000 Mcf (14.73 psia) of natural gas each to Northern and Peoples during the period between November 1, 1965, and April 30, 1966, all as more fully set forth in the application.

Specifically, Midwestern proposes to provide firm temporary winter service to Northern and Peoples under a proposed new FPC Rate Schedule to be designated as Rate Schedule TWS–1 Contract Demand Temporary Winter Service. The volume of gas to be delivered in any one day will be limited to a temporary daily quantity which, with certain exceptions, will not be in excess of two per cent of the temporary winter quantity. Midwestern proposes to deliver a temporary daily quantity of 10,000 Mcf of each to Northern and Peoples. The proposed service is firm, taking precedence after Midwestern's regular firm service and before service on an interruptible, temporary or emergency basis. Gas proposed to be sold to Northern and Peoples will be at a rate of 63.49 cents per Mcf.

Midwestern will receive the gas proposed to be sold by Tennessee in Docket No. CP66–25 at Portland, Tennessee. Midwestern will transport said gas for sale near Joliet, Illinois. No additional facilities will be required by either Tennessee or Midwestern for the proposed services.

On August 11, 1965, Northern filed a petition to intervene in support of the subject applications. Northern does not request formal hearing and does not object to the hearing and disposition of the subject applications under the shortened procedure provided for by the Commission's Rules. Inasmuch as the shortened procedure is being used herein, no further action on said petition appears necessary.

After due notice, no other petition to intervene, notice of intervention or protest to the granting of the applications has been filed.

At a hearing held on November 24, 1965, the Commission on its own motion received and made a part of the record in these proceedings all evidence, including the applications and exhibits submitted in support of the authorizations sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Tennessee Gas Transmission Company, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of July 12, 1947, in Docket No. G–910 (6 FPC 777).

(2) Applicant, Midwestern Gas Transmission Company, a Delaware corporation having its principal place of business in Chicago, Illinois, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order issued May 12, 1959, in Docket No. G–16841 (21 FPC 653).

(3) The proposed sales and delivery of natural gas by Tennessee and Midwestern hereinbefore described, as more fully described in the applications in these proceedings, are to be made in interstate commerce, subject to the jurisdiction of the Commission, and are, therefore, subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(4) Applicants are able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(5) The proposed sales and delivery of natural gas by Tennessee and Midwestern are required by the public convenience and necessity and certificates therefor should be issued as hereinafter ordered and conditioned.

(6) Public convenience and necessity require that the certificates issued hereinafter and the rights granted thereunder be conditioned upon Applicants' compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3) and (e) of Section 157.20 of such Regulations.

(7) Midwestern should tender for filing a proposed FPC Gas Rate Schedule TWS–1 and service agreements with Northern and Peoples all in conformance with the proposed rate schedule and service agreements submitted in its application in Docket No. CP66–15.

The Commission orders:

(A) Certificates of public convenience and necessity are issued authorizing Applicants, Midwestern Gas Transmission Company and Tennessee Gas Transmission Company, to sell and deliver natural gas as hereinbefore described, all as more fully described in the applications in these proceedings, upon the terms and conditions of this order.

(B) The certificates issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicants' compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3) and (e) of Section 157.20 of such Regulations.

(C) The sales and delivery of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 3 months from the date on which this order issues.

(D) Midwestern shall tender for filing a proposed FPC Gas Rate Schedule TWS–1 and service agreements with Northern and Peoples all in conformance with the proposed rate schedule and service agreements submitted in its application in Docket No. CP66–15.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr. and Carl E. Bagge.

NATURAL GAS PIPELINE COMPANY OF AMERICA, DOCKET NO. CP66-85

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued November 29, 1965)

On September 28, 1965, Natural Gas Pipeline Company of America (Applicant), filed in Docket No. CP66-85 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the sale and delivery of an additional Daily Contract Quanity of 300 Mcf of gas to The City of Nebraska City, Nebraska (Nebraska City), an existing customer of Applicant, all as more fully set forth in the application.

Nebraska City's presently effective Daily Contract Quantity is 4,506 Mcf under Applicant's Rate Schedule CD-2, and 3,455 Mcf of maximum day storage withdrawal service under Applicant's Rate Schedule S-1.

Nebraska City has advised Applicant by letter dated September 8, 1965, it desires and will contract for an additional Daily Contract Quantity of 300 Mcf of natural gas and its latest estimate of 1965-66 peak day requirements exceeds by 300 Mcf its now available 1965-66 peak day supply. Applicant has agreed to supply Nebraska City with the additional quantity of gas requested with commencement of increased deliveries authorized in Docket Nos. CP65-169 and CP65-404, issued August 13, 1965, and August 24, 1965, 34 FPC 507, 568, respectively, which will be delivered from Applicant's unallocated capacity of 30,171. Mcf authorized in the aforementioned Docket No. CP65-404. No additional facilities will be required to make the proposed delivery.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on November 24, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits submitted in support of the authorization, and upon consideration of the record.

The Commission finds:

(1) Applicant, Natural Gas Pipeline Company of America, a Delaware corporation having its principal place of business in Chicago, Illinois, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of November 7, 1958, in Docket No. G-9966 (20 FPC 694).

(2) The proposed sale and delivery of natural gas by Applicant to Nebraska City, as hereinbefore described, and as more fully described in the application and exhibits in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid proposed sale and delivery of natural gas are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural

Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to the Applicant in this proceeding, authorizing the sale and delivery of natural gas to Nebraska City, as more fully described in the application and exhibits in this proceeding, subject to the jurisdiction of the Commission, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b) and (e) of Section 157.20 of such Regulations.

(C) The service authorized shall be commenced as provided in paragraph (b) of Section 157.20 of the aforesaid Regulations within sixty days of the date on which this order issues.

(D) Applicant shall file pursuant to Part 154 of the Commission's Regulations an acceptable service agreement reflecting the terms and conditions of the sale and the delivery of the additional Daily Contract Quantity to Nebraska City.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr. and Carl E. Bagge.

NORTHERN NATURAL GAS COMPANY, DOCKET NO. CP66-80

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued November 29, 1965)

On September 20, 1965, Northern Natural Gas Company (Applicant), filed in Docket No. CP66-80 an application, as supplemented on October 11, 1965, pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the sale and delivery of additional contract demand to an existing utility customer for the 1965-66 heating season, and, further, authorizing initial firm service to an industrial consumer and an increase of firm service to another industrial consumer, both of whom are served by two of Applicant's customer utility companies, all as more fully set forth in the application, as supplemented, in this proceeding.

Applicant seeks authorization to increase the contract demand of Elkhorn Valley Natural Gas Company from 1280 Mcf to 1380 Mcf per day in order that the latter may meet the growth requirements for the presently served communities of Hooper and Scribner, Nebraska. The request for additional contract demand is based on actual experience during the peak period of the 1964-65 heating season.

Under the provisions of Applicant's existing tariff, firm service to a large volume industrial consumer is subject to certificate authorization of this Commission. Therefore, Applicant proposes to (1) initiate firm service of 88 Mcf per day to Luverne Co-op Creamery (Creamery), Luverne, Minnesota, to be served by Central Natural Gas Company (Central), and (2) increase the firm service from 850 Mcf per day to 1030 Mcf per day to Wood Conversion Company (Wood Conversion) being served by Iron Ranges Natural Gas

Company (Iron Ranges). No additional contract demands are requested by the utilities since the proposed increased service to Creamery and Wood Conversion will be met under existing contract quantities.

Creamery will utilize natural gas in a drying chamber for the production of powdered milk. Wood Conversion will utilize the additional quantities of gas in a direct fired dryer for the production of acoustical and ceiling tile.

Applicant will require no additional facilities to render the proposed service.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on November 24, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application, supplement and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Northern Natural Gas Company, a Delaware corporation having its principal place of business in Omaha, Nebraska, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of April 6, 1943, in Docket No. G-280 (3 FPC 967).

(2) The sales of natural gas by Applicant hereinbefore described, as more fully described in the application in this proceeding, are to be made in interstate commerce subject to the jurisdiction of the Commission and are, therefore, subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The sales of natural gas proposed by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Firm deliveries of natural gas by Applicant made through (a) Central to Creamery should be allowed in an amount up to 88 Mcf per day, and (b) Iron Ranges to Wood Conversion should be allowed in an amount up to 1030 Mcf per day.

(6) Public convenience and necessity require that the certificate issued thereunder hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued authorizing Applicant, Northern Natural Gas Company, to sell natural gas for resale as hereinbefore described, all as more fully described in the application, as supplemented, in this proceeding, upon the terms and conditions of this order.

(B) Firm deliveries of natural gas by Applicant made through (a) Central to Creamery shall be allowed in an amount up to 88 Mcf per day, and (b) Iron Ranges to Wood Conversion shall be allowed in an amount up to 1030 Mcf per day.

(C) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable

Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3) and (e) of Section 157.20 of such Regulations.

(D) The sales of natural gas authorized herein shall commence as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act within 6 months from the date on which this order issues.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr. and Carl E. Bagge.

PACIFIC NORTHWEST PIPELINE CORPORATION, G–13018; EL PASO NATURAL GAS COMPANY, G–13019; EL PASO NATURAL GAS COMPANY, CP66–27; NORTHWEST PIPELINE CORPORATION, CP66–28; NORTHWEST PIPELINE CORPORATION, CP66–29; NORTHWEST PIPELINE CORPORATION, CP66–30.

ORDER GRANTING MOTION AND SETTING DATE FOR PREHEARING CONFERENCE

(Issued November 29, 1965)

On October 11, 1965, the Commission staff (Staff) filed a motion for an order requiring the submittal of supplemental written testimony and presentation of independent witnesses in support of Northwest Pipeline Corporation's applications in this proceeding. The motion noted that the Commission had required Northwest Pipeline Corporation (Northwest) and El Paso Natural Gas Company (El Paso) to file written testimony and hearing exhibits in support of their applications on or before October 1, 1965, and that El Paso and Northwest had purported to comply with this requirement by the submission of the testimony of six witnesses, five of whom testified for El Paso and one for Northwest. By letter of its attorney, Northwest indicated the adoption of the testimony of the El Paso witnesses. Staff argued in its motion that the evidence submitted was not sufficient to adequately support the applications, that extensive cross-examination would be necessary to fully develop a record, and particularly that it was necessary that Northwest present witnesses "*who are independent from El Paso*" in support of its applications. The thrust of Staff's motion is that as a result of the decree of divestiture an independent company potentially capable of competing with El Paso must be created and that the evidence presented to the Commission is insufficient to allow the formation of a basis for the conclusion that the company which will acquire and operate the properties to serve the Pacific Northwest area will be financially and economically feasible in the future.

On November 5, 1965 El Paso and Northwest filed answers in opposition to Staff's motion; Cascade Natural Gas Corporation filed an answer in support of Staff's motion.

El Paso and Northwest argue primarily that compliance with Staff's motion would be time consuming and would not allow divestiture "without delay" as required by the mandate of the Supreme Court, that Staff's motion is not sufficiently specific as to the kind of evidence desired, that Staff's motion requires a procedure "contrary to the established course of procedure," and to suggest that expert witnesses who are employees of El Paso should be disqualified as witnesses in support of Northwest's applications, is without basis in fact, in law, or in practice.

The April 6, 1964, mandate of the Supreme Court was to require the divestiture by El Paso of the former Pacific Northwest Pipeline Corporation properties without delay. The Commission recognizes that the divestiture decree of the District Court was issued pursuant to that mandate and that it constitutes a determination of the anti-trust issues in the proceeding. However, as recognized in the divestiture decree, under the Natural Gas Act it is incumbent upon El Paso and Northwest to file and prosecute the applications for certificate authorization presented in this proceeding. This does not mean mere *pro forma* compliance with the requirements of the Act and the Commission's Regulations. The Commission prior to certificating any major new pipeline must be assured that there will be an existing corporation capable of rendering long-term service sufficient to meet the demands of the market area at a price which is reasonable. This, *Northwest* must demonstrate in this proceeding. The decisions of *its* officers and personnel are the decisions upon which the customers in its service areas will have to rely. It is obligatory that Northwest assume complete responsibility for any decisions or positions emanating from this proceeding. It is quite evident to this Commission that the independent judgment of the Northwest officials is absolutely necessary to a determination of the capabilities of the corporation to serve the new area. This judgment must be expresesd in this proceeding through evidence bearing upon the economic stability and future expectations of the company and upon the physical capacity of the company to meet its requirements. It is not the kind of evidence which should be drawn out on cross-examination by Staff or other parties. While it might be proper from a technical point of view for Northwest's officials to adopt the testimony of El Paso personnel in support of their case, it is also evident to this Commission that by so doing, the element of independent judgment so necessary to a sensible determination in this case will be missing. Staff's motion seeking to require the presentation of independent witnesses by Northwest is well taken and will be granted.

As to the requirement that evidence supplemental to that previously presented be served in order to more fully explain the companies' positions, we agree that only minimal evidence has been presented at this time. El Paso has pointed out that Staff did not particularize the evidence it felt was deficient. While this is true, we note that our regulations require the submittal of fully explained information. Regulations under the Natural Gas Act, Section 157.14(a). Evidence submitted in support of an application should *at least* comply with this requirement. A review of the evidence submitted herein does not show that this condition was met. For example, nowhere in the submitted evidence do El Paso witnesses testify as to the effect on *El Paso* of the proposed divestiture. Lacking information of this kind, as well as other detail, Staff was entirely correct in filing the motion.

We agree with the applicants, however, that further particularization of the nature of the additional evidence would be useful. For this purpose, El Paso's suggestion that a prehearing conference be held is proper. A prehearing conference would enable all parties to the proceeding to present a statement as to the issues involved and their views on those issues, and, insofar as there is misunderstanding or disagreement as to the precise nature or quantum of additional evidence which should be adduced a prehearing conference under the examiner who will eventually hear the case would be the appropriate place for clarification and determination. Accordingly, we here order that a prehearing conference be held on December 16, 1965, for consideration of matters which might expedite this proceeding and particularly to explore and determine any remaining questions as to the nature of the additional evidence the applicants will be required to adduce.

The Commission orders:

(A) The motion of the Commission staff filed on October 11, 1965, is granted.

(B) Northwest Pipeline Corporation shall file additional evidence fully supporting its applications in this proceeding.

(C) El Paso Natural Gas Company shall file additional evidence fully supporting its applications in this proceeding.

(D) A prehearing conference shall be held on December 16, 1965, at 10:00 a.m. (EST) in a hearing room of the Federal Power Commission, 441 G St., N.W., Washington, D.C., for the purpose of further determining methods to expedite the proceeding and for further clarification and determination of the manner in which Northwest and El Paso shall comply with Ordering Paragraphs B and C hereof.

(E) Presiding Examiner Harry Frazee or any other officer or officers of the Commission designated by the Chief Examiner shall preside at the above-ordered prehearing conference and shall take such action as may be appropriate to expedite the hearing.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr. and Carl E. Bagge.

PACIFIC POWER & LIGHT COMPANY, PROJECT NO. 2082

ORDER FURTHER AMENDING LICENSE (MAJOR)

(Issued November 29, 1965)

Application was filed on March 29, 1965 by Pacific Power & Light Company, licensee for major Project No. 2082, for further amendment of the license to include therein the proposed Keno Development in the stretch of the Klamath River downstream from the Bureau of Reclamation's Link River Dam located near the City of Klamath Falls, Oregon.

The application proposes that the Keno Development, which will affect public lands and utilize navigable waters of the United States, would be constructed in two stages: (1) immediate construction of Keno Dam to replace the damaged existing Keno Regulation dam (now part of the project) and improvement of the river channel upstream from the new dam; and (2) construction of power facilities downstream from the new dam beginning in about 1971 with completion in December 1973. The Keno Regulating dam has been operating by the licensee under an agreement with the Bureau of Reclamation to regulate the level of the Klamath River and of Lake Ewauna upstream from the dam. However, floods of December 1964 and January 1965 damaged the Keno Regulating dam and also caused serious flooding of land adjacent to the Klamath River and Lake Ewauna upstream from Keno Regulating dam. The subject application for amendment seeks Commission authorization to construct a new Keno Dam together with power facilities and to improve the channel of the Klamath and Link Rivers upstream of such dam. Commencement of the channel excavation was undertaken in February 1965 as an emergency measure with the prior approval of the Bureau of Reclamation and written notice to the Commission, and consisted of a 3,000 foot long channel, 100 feet wide at the bottom, along the left bank of the river and through the left dike at the Keno Regulating Dam, principally upon lands of the Bureau of Reclamation.

Specifically, Stage 1 would consist of: (1) a low gated concrete diversion dam on the Klamath River at about mile 235, with top pool elevation of

4086.5 feet msl; (2) channel improvement in the Klamath River from about mile 235 to mile 251, and removal of the existing Keno Regulating dam now part of the license; and (3) channel improvement in Link River; and Stage 2 would consist of: (1) an intake structure; (2) a power conduit about 22,500 feet long with capacity for 5,000 cfs; (3) a penstock; and (4) an outdoor powerhouse at about mile 229 with two units rated at 50,000 kw each, discharging into the pool of the John C. Boyle Development of Project No. 2082.

The Secretary of the Army and the Chief of Engineers have reported that the plans of the project structures affecting navigation are satisfactory insofar as the interests of navigation are concerned.

The Department of the Interior, in reporting on the application, has advised, among other things, that: (1) interests of the Buerau of Reclamation in the stretch of the Klamath River to be occupied by the proposed new Keno Dam require renegotiation of existing contracts between the licensee and the Bureau; and (2) conservation and development of fish and wildlife resources require special license conditions in the interests of fish and wildlife and recreational resources. Articles 55 through 62 herein substantially incorporate the Department's recommendations.

The Department of Agriculture, in reporting on the application, has advised that while the Keno Development would not occupy any National Forest lands, the development would affect lands of the United States within the Winema National Forest through possible variations in the level of Upper Klamath Lake. The Department concluded that the amended project would not interfere or be inconsistent with the purposes for which the Winema National Forest was created or acquired provided the amended license include conditions: (1) providing that the licensee maintain the level of Upper Klamath Lake between stated maximum and minimum levels; and (2) that in any negotiations for the changing of the existing lake levels or water agreements with the Bureau of Reclamation, the licensee shall consult with the Bureau of Sports Fisheries and Wildlife, the Oregon Game Commission and the Department. The Department's proposed-conditions insofar as they relate to regulation of the level of Upper Klamath Lake, are inappropriate here since no project works included or proposed to be included under the license for Project No. 2082 would control the level of Upper Klamath Lake. The level of that lake is controlled by the Link River Dam, owned by the Bureau of Reclamation and operated under agreement with the Bureau by the Pacific Power & Light Company. However, the objectives of the Department's second proposed condition, to the extent that it is applicable to Project No. 2082, will be adequately served by the general provisions of Article 58, *infra*.

The Department of Agriculture also requested a condition in the license which would "safeguard the rights" of small preference customers to obtain power from the subject project or from the Licensee's general system, without undue restriction. In commenting on the letter, the licensee advises that it provides service to REA financed cooperatives in its area by sale or by wheeling, and that while questions arise from time to time, they have been resolved on a mutually satisfactory basis, and it expects this will continue in the future. In our opinion, there is no need for the license condition suggested by the Secretary of Agriculture. The interests of REA-financed cooperatives, or of any other preference systems of the area, can be protected by other means. Section 202(b) of the Federal Power Act empowers this Commission, in appropriate circumstances, to direct a public utility to establish physical interconnection of its transmission facilities with the facilities of one or more other persons engaged in the transmission or sale of

electric energy, and to sell energy or to exchange energy with such persons on such terms and condition as the Commission might deem desirable. There appears to be no reason why an REA-financed cooperative or other preference system could not avail itself, if necessary, of the relief afforded by Section 202(b).

The Department of Health, Education, and Welfare has reported the proposed Keno Development would tend to reduce flooding of the sewage treatment plant of the City of Klamath Falls and would have no adverse effects on water supply, water pollution control, or mosquito control.

The State of Oregon, acting by and through its State Game Commission and its Fish Commission, filed a petition to intervene in this proceeding in the interests of fish and wildlife. By letter dated July 19, 1965, the Petitioners advised that they do not oppose, the proposed project but that the State of Oregon wishes to be a party to the proceeding to ensure that the resident species of game fish and animals and the possible later addition of anadromous food and game fish are protected from any adverse effects of the project. By order of this date, we are permitting the intervention sought.

As stated above, the application seeks to include in the license, as the second stage of construction, of the new Keno Dam, the installation of power facilities to be constructed in about 1971. However, since it appears that power from the new Keno Development will not be required in the area involved until 1974–75, we are under the general provisions of Article 65 herein, reserving the right to direct at a later date the construction of power facilities to develop the head between Keno Dam and the Boyle Reservoir of Project No. 2082.

The inclusion in the license of the proposed new Keno Dam will increase the area of Government lands occupied by the project, exclusive of transmission line right-of-way, by 84.30 acres, with a resultant increase in the amount of annual charges for such occupancy.

The Commission finds:

(1) Public notice of the application has been given. Excepting for the afore-mentioned petition and in an informal protest by Lyle Kellstrom, of Klamath Falls, Oregon, on his own behalf and 17 other individuals, which protest was subsequently withdrawn, no other petitions or protests have been received.

(2) There are no conflicting applications before the Commission. The issuance of a license amendment as hereinafter provided, will not affect the development of any water resources for public purposes which should be undertaken by the United States.

(3) The increased amount of annual charges to be paid under the license as herein amended for the purpose of recompensing the United States for the occupancy of its lands, exclusive of transmission line right-of-way, is reasonable as hereinafter fixed and specified.

(4) The exhibits designated and described in paragraph (C) below conform to the Commission's Rules and Regulations and should be approved as part of the license for the project as amended by this order to the extent indicated.

The Commission orders:

(A) The exhibits designated and described in paragraph (C) below are hereby approved as part of the license for Project No. 2082 to the extent indicated.

(B) The license for Project No. 2082 is hereby further amended, effective as of November 1, 1965, to include therein the new Keno Dam and the improvement of the river channel upstream from the dam.

(C) Subparagraph (a) of finding (3) of the license is hereby amended to include the following exhibits:

KENO DEVELOPMENT

Exhibit	Sheet	FPC No. 2082	Titled
J		-163	General Map.
K-8	1 (Rev. 8-24-65)	-176	Keno Development, except insofar as it shows tunnel, canal, flume, penstock, and powerhouse.
L-22	2	-165	Keno Development.
	1	-167	Keno Development Dam and Spillway.
	4	-170	Channel improvement—river mile 234.6-235.2.
	5	-171	Channel improvement—river mile 235.2-236.
	6	-172	Channel improvement—river mile 236-247.
	7	-173	Channel improvement—river mile 246-254.

(D) Subparagraph (b) of finding (3) of the license is hereby amended to include the following description of the new Keno Development:

Keno Development

A low, gated concrete diversion dam about 25 feet high and located on the Klamath River at approximately mile 235, with top pool elevation of 4086.5 feet msl; channel improvement in Klamath River from approximately mile 235 to mile 254; and channel improvement in Link River.

(E) Subparagraph (b) of Article 35 of the license is hereby amended, effective as of November 1, 1965, to read as follows:

(b) For the purpose of recompensing the United States for the use, occupancy, and enjoyment of its lands, exclusive of those used for transmission line right-of-way, $1,043.62.

(F) Articles 4, 7, and 25 of the license are hereby eliminated from the license.

(G) The following articles, some of which are in lieu of the articles designated in paragraph (F) above and some of which are additional articles, are hereby included in the license for the project:

Article 54. The construction, operation, and maintenance of the project and any work incident to additions or alterations shall be subject to the inspection and supervision of the Regional Engineer, Federal Power Commission, San Francisco, California, or of such other officer or agent as the Commission may designate, who shall be the authorized representative of the Commission for such purposes. The Licensee shall cooperate fully with said representative and shall furnish him a detailed program of inspection by the Licensee that will provide for an adequate and qualified inspection force for construction of the project. Construction of the project works or any feature thereof shall not be initiated until the program of inspection for the project works or any such feature thereof has been approved by said representative. The Licensee shall also furnish to said representative such further information as he may require concerning the construction, operation, and maintenance of the project, and of any alteration thereof, and shall notify him of the date upon which work will begin, and as far in advance thereof as said representative may reasonably specify, and shall notify him promptly in writing of any suspension of work for a period of more than one week, and of its resumption and completion. The Licensee shall allow him and other officers or employees of the United States, showing proper credentials, free and unrestricted access to, through, and across the project lands and project works in the performance of their official duties.

Article 55. The Licensee shall enter into a formal agreement with the United States Bureau of Reclamation for the purpose of regulating the level of Lake Ewauna and the Klamath River between Keno Dam and Lake Ewauna, and in the event that the Licensee and the Bureau fail to reach agreement, the Commission will prescribe the terms of such regulation after notice and opportunity for hearing.

Article 56. In order to prevent, or to minimize to the extent reasonably possible, deleterious effects to fish and wildlife caused by construction activities during the construction of the first stage of the Keno development, the Licensee shall, in consultation with the Oregon State Game Commission and the Bureau of Sport Fisheries and Wildlife, schedule and supervise the construction activities so as to: (a) minimize turbidity, siltation or other water pollution, (b) prevent the destruction of waterfowl nesting areas from deposition of spoil from channel improvement activities, and (c) avoid disturbing waterfowl nesting areas during the nesting season: *Provided*, That the Commission, on its own motion or upon motion of the Oregon State Game Commission or the Bureau of Sport Fisheries and Wildlife, may prescribe measures reasonably necessary to accomplish these objectives.

Article 57. The Licensee shall, prior to construction of Stage 2 of the Keno development, cooperate with the Oregon State Game Commission, U.S. Forest Service, and Bureau of Sport Fisheries and Wildlife in conducting additional studies to determine effects construction of the second stage of the Keno development would have on fish and wildlife resources. The Licensee shall incorporate into project plans measures found necessary to mitigate and compensate for the loss and damage to existing fish and wildlife resources. Cost of such measures shall be borne by the Licensee.

Article 58. The Licensee shall, for the conservation and development of fish and wildlife resources, construct, maintain, and operate, or arrange for the construction, maintenance, and operation of such facilities and comply with such reasonable modifications of the project structures and operation as may be ordered by the Commission upon its own motion or upon the recommendation of the Secretary of the Interior, Oregon State Game Commission, or California Department of Fish and Game, after notice and opportunity for hearing and upon findings based on substantial evidence that such facilities and modifications are necessary and desirable, reasonably consistent with the primary purpose of the project, and consistent with the provisions of the Act.

Article 59. Whenever the United States shall desire, in connection with the project, to construct fish and wildlife facilities or to improve the existing fish and wildlife facilities at its own expense, the Licensee shall permit the United States or its designated agency to use, free of cost, such of Licensee's lands and interest in lands, reservoirs, waterways and project works as may be reasonably required to complete such facilities or such improvements thereof. In addition, after notice and opportunity for hearing, the Licensee shall modify the project operation as may be prescribed by the Commission, reasonably consistent with the primary purpose of the project, in order to permit the maintenance and operation of the fish and wildlife facilities constructed or improved by the United States under the provisions of this article. This article shall not be interpreted to place any obligation on the United States to construct or improve fish and wildlife facilities or to relieve the Licensee of any obligation under this license.

Article 60. The Licensee shall, within one year from the date of the Commission order authorizing the construction of the Keno development, file with the Commission for approval an Exhibit R conforming to Section 4.41 of Commission Regulations under the Federal Power Act. The plan shall be prepared

after consultation with appropriate Federal, State, and local agencies, and shall include recreational improvements which may be provided by others in addition to the improvements the Licensee plans to provide.

Article 61. The Licensee shall construct, maintain and operate or shall arrange for the construction, maintenance and operation of such recreational facilities including modifications thereto, such as access roads, wharves, launching ramps, beaches, picnic and camping areas, sanitary facilities and utilities, as may be prescribed hereafter by the Commission during the term of this license upon its own motion or upon the recommendation of the Secretary of the Interior or other interested Federal and State agencies, after notice and opportunity for hearing and upon findings based upon substantial evidence that such facilities are necessary and desirable, and reasonably consistent with the primary purpose of the project.

Article 62. So far as is consistent with proper operation of the project, the Licensee shall allow the public free access, to a reasonable extent, to project waters and adjacent project lands owned by the Licensee for the purpose of full public utilization of such lands and waters for navigation and recreational purposes, including fishing and hunting, and shall allow to a reasonable extent for such purposes the construction of access roads, wharves, landings, and other facilities on its lands the occupancy of which may in appropriate circumstances be subject to payment of rent to the Licensee in a reasonable amount: *Provided, that* the Licensee may reserve from public access, such portions of the project waters, adjacent lands, and project facilities as may be necessary for the protection of life, health, and property and *Provided further,* that the Licensee's consent to the construction of access roads, wharves, landings, and other facilities shall not, without its express agreement, place upon the Licensee any obligation to construct or maintain such facilities. These facilities are in addition to the facilities that the Licensee may construct and maintain as required by the license.

Article 63. No lease of the project or any part thereof whereby the lessee is granted the occupancy, possession, or use of the project, or any part thereof, shall be made without prior written approval of the Commission; and the Commission may, if in its judgment the situation warrants, require that all the conditions of license, of the Act, and of the rules and regulations of the Commission shall be applicable to such property so leased to the same extent as if the lessee were the Licensee: *Provided, that* the provisions of this article shall not apply to leases of land or buildings or other property while not required to achieve the purposes of the license.

Article 64. On the application of any person, association, corporation, Federal agency, State or municipality, the Licensee shall, after notice and opportunity for hearing, permit such reasonable use of its reservoirs or other project works or parts thereof as may be ordered by the Commission in the interest of comprehensive development of the waterway or waterways involved and the conservation and utilization of water resources of the region for water supply for steam-electric, irrigation, industrial, municipal or similar purposes, consistent with the primary objective of the project. The Licensee shall receive such reasonable compensation as may be appropriate for use of its reservoirs or other project works or parts thereof for such purposes, any such compensation to be fixed either by Commission approval of an agreement between the Licensee and the party or parties benefiting or by the Commission in the event the parties are unable to agree. Applications shall contain information in sufficient detail to afford a full understanding of the proposed use, including satisfactory evidence that the applicant possesses necessary water rights pursuant to applicable State law, or a showing of cause why

such evidence cannot be submitted, and a statement as to the relationship of the proposed use to any State or municipal plans or orders which may have been adopted with respect to the use of such waters.

Article 65. The Licensee shall install additional capacity or make other changes in the project as directed by the Commission, to the extent that it is economically sound and in the public interest to do so, after notice and opportunity for hearing.

Article 66. The Licensee shall submit in accordance with the Commission's rules and regulations, revised Exhibit L drawings showing final design for channel improvement in the Klamath River from river mile 236 to 254, inclusive, and shall not begin construction of such work until the Commission approves the exhibit.

Article 67. Licensee shall remove the existing Keno Regulating Dam as soon as the new Keno Dam to replace it is in service and Licensee shall request the exhibits which show the existing Keno Regulating Dam and the description of same to be eliminated from the license.

(H) This amendment in the manner set out above shall not operate to alter or amend the license in any other respect, and shall not in any way constitute a waiver of any other part, provision or condition of the license.

(I) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license amendment. In acknowledgment of the acceptance of this license amendment, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr. and Carl E. Bagge.

TEXAS GAS TRANSMISSION CORPORATION, DOCKET NO. CP66-41

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued November 29, 1965)

On August 4, 1965, Texas Gas Transmission Corporation (Applicant) filed in Docket No. CP66-41 an application, as supplemented on September 23, 1965, pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of facilities and the transportation of natural gas to enable Applicant to exchange natural gas with the Memphis Light, Gas & Water Division (Memphis) of the City of Memphis, Tennessee, an existing customer, in connection with the operation of liquefied natural gas storage facilities to be constructed by Memphis for peak-shaving operations, all as more fully described in the application.

Memphis plans to construct and operate a liquefied natural gas plant for peak-shaving operations at a site north of the City of Memphis, Tennessee, and downstream of existing points of delivery for gas purchased from Applicant. The facilities proposed to be constructed by Memphis will not be physically attached to Memphis' present distribution system. The storage tank will have a capacity of 1,000,000 Mcf and a liquefication and vaporization capability of 5,000 Mcf per day and 200,000 Mcf per day, respectively.

Applicant will deliver peak-shaving volumes of natural gas to Memphis at existing delivery points and Memphis will deliver simultaneously equal vol-

umes of gas from its storage facilities into Applicant's system through the facilities which Applicant herein proposes to construct and operate. Pursuant to an agreement between the parties, the maximum volumes exchanged during any hour are not to exceed fifty percent of the total sales volumes of gas delivered by Applicant to Memphis during such hour. The application states that Memphis anticipates exchange volumes increasing from 111,517 Mcf per day in 1966 and 162,105 Mcf per day in 1972 and that Memphis has no present plans to increase the liquefied natural gas plant capacity.

Specifically, Applicant proposes to replace a forty-foot segment in each of its two 26-inch main lines with heavier wall pipe, to install eighty feet of 16-inch heavy wall pipe to serve as a tie-over between the 26-inch lines, to install eighty feet of 20-inch heavy wall pipe between its meter station and Memphis' facilities and the 16-inch tie-over, and to install one meter station. Estimated cost of the proposed facilities is $40,500 which will be financed from funds on hand.

After due notice no petition to intervene, notice of intervention or protest to the granting of the application has been received.

At a hearing held on November 24, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application, as supplemented, and exhibits thereto, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Texas Gas Transmission Corporation, a Delaware corporation having its principal place of business in Owensboro, Kentucky, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of March 30, 1948, in Docket No. G–855 (7 FPC 213).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, will be used for the transportation of natural gas interstate commerce subject to the jurisdiction of the Commission, and the construction and operation thereof and the transportation of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The proposed construction and operation of facilities and transportation of natural gas by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued authorizing Applicant, Texas Gas Transmission Corporation, to construct and operate facilities and to transport natural gas as hereinbefore described, all as more

fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The construction authorized in paragraph (A) above shall be completed and the facilities placed in actual operation as provided by paragraph (b) of Section 157.20 of the Regulations under the Natural Gas Act within three months of the date on which this order issues.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr. and Carl E. Bagge.

CITY OF CLEWISTON, FLORIDA v. FLORIDA POWER & LIGHT COMPANY, DOCKET NO. E-7243

ORDER PROVIDING FOR INVESTIGATION AND HEARING, AND DENYING MOTION TO DISMISS

(Issued November 30, 1965)

By this order we initiate an investigation and provide for hearing to determine whether the Florida Power & Light Company (FPL) should be required to establish interconnection with and render wholesale electric service to the City of Clewiston, Florida (Clewiston) and the rate therefor.

On September 7, 1965, Clewiston filed an Application For Interconnection and Complaint Against Unlawful Actions, requesting that this Commission, pursuant to Sections 202, 205, 206, 207, 306, 307, 308, 309, 316 and 317 of the Federal Power Act, order a direct interconnection between FPL and Clewiston, and require the rendition of wholesale electric service by FPL to Clewiston. Clewiston's complaint alleges that FPL presently supplies wholesale electric service to Glades Electric Cooperative, Inc., Moore Haven, Florida (Glades) which in turn supplies electric power and energy to an industrial corporation, the United States Sugar Corporation (Sugar Corporation). Clewiston's electric facilities connect with electric facilities of Sugar Corporation. The latter corporation generates a portion of its electric requirements and, as indicated, purchases a portion from Glades. During the twelve months ended September 30, 1964, Clewiston paid an average charge of 1.7¢ per kwh based upon total receipts of 14,417,000 kwh. Clewiston alleges that FPL has refused to provide a direct connection and electric service to Clewiston.

On October 6, 1965, FPL filed an answer opposing Clewiston's application for interconnection and complaint and a motion to dismiss the complaint for lack of jurisdiction. The answer and motion argue principally that Clewiston's complaint is premature because FPL has not been determined to be a public utility within the meaning of the Federal Power Act subject to the regulatory jurisdiction of this Commission. In reply to the motion for dismissal, Clewiston notes the pendency of this Commission's jurisdictional proceeding directed to FPL, *Florida Power & Light Company* Order Initiating Investigation and Hearing, issued February 26, 1965, Docket No. E-7210, 33 FPC 328, but maintains that concurrent Commission action in that proceeding and upon the

City's application and complaint is warranted in the interests of the power supply needs of Clewiston.

Upon consideration of the contentions by Clewiston and FPL in the aforementioned pleadings, we conclude that the matters raised in Clewiston's application for interconnection and complaint should be investigated by our staff and set for public hearing. We do not agree with FPL that a prior determination that it is a public utility under the Act constitutes a prerequisite to a hearing on the merits of Clewiston's complaint. Clearly, such would place a considerable time burden upon parties filing complaints with the Commission. Therefore, the jurisdictional issue now before a Commission trial examiner in Docket No. E–7210 should be determined concurrently with the merits of Clewiston's complaint without further delay, and the motion to dismiss must be denied.

A copy of Clewiston's application for interconnection and complaint, together with a request for comments by November 9, 1965, was forwarded to Glades and Sugar Corporation. To date no reply has been received.

The Commission further finds:

In view of the foregoing, it is necessary and appropriate for the purposes of carrying out the provisions of the Federal Power Act, and particularly, but not in limitation of the foregoing, Sections 202, 205, 206, 207, 306, 307, 308 and 309, that (1) FPL's motion to dismiss the application and complaint be denied, and (2) an investigation and a public hearing be ordered respecting the issues presented in the Application for Interconnection and Complaint filed by Clewiston and FPL's Answer thereto.

The Commission orders:

(A) FPL's Motion to Dismiss for Lack of Jurisdiction the Application for Interconnection and Complaint filed by Clewiston is hereby denied.

(B) A public hearing shall be held concerning the issues presented in the Application for Interconnection and Complaint filed by Clewiston and FPL's Answer thereto at a time and place to be specified by the presiding examiner.

(C) A prehearing conference shall be held before the presiding examiner commencing at 10:00 a.m. (EST), January 18, 1966 in a hearing room of the Federal Power Commission, 441 G Street, N.W., Washington, D.C., for purposes as specified in the Commission's Rules of Practice and Procedure.

(D) In order that the issues involved herein may be properly determined, an investigation is hereby initiated and FPL is hereby directed pursuant to the provisions of Sections 307 and 309 of the Federal Power Act to grant to authorized members of the staff of the Federal Power Commission during regular business hours, free access to its property and access to and the right to inspect and examine all of its accounts, records and memoranda including, but not limited to, the following: books, papers, correspondence, contracts, agreements, maps, reports of engineers, meter readings, and log sheets upon their request; and shall either furnish copies of such material at the request of the staff, or make such material available for reproduction by the staff or shall produce such material for use by the staff prior to and during said hearing at the Offices of the Commission, 441 G Street, N.W., Washington, D.C. 20426.

(E) Notices of intervention or petitions to intervene in this proceeding may be filed with the Federal Power Commission, Washington, D.C. 20426, on or before December 31, 1965, in accordance with the Commission's Rules of Practice and Procedure (18 CFR 1.8 or 1.37).

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr. and Carl E. Bagge.

THE MONTANA POWER COMPANY, PROJECT NO. 2188

ORDER APPROVING AMENDED PROJECT EXHIBIT L DRAWINGS

(Issued November 30, 1965)

On July 26, 1965, The Montana Power Company, licensee for Project No. 2188, filed for Commission approval amended Exhibit L drawings showing repairs and reconstruction to be made to the dam of the Madison development of the project. The project, known as the Missouri River Project, is located on the Missouri and Madison Rivers, Montana.

The work, which was necessary to reduce excessive leakage and to replace the deteriorated top timber crib section which holds the stanchions for the flashboards, consists principally of driving steel sheet piling against the upstream face of the dam, and replacing the top timber and rock crib section of the dam with concrete. The plans for the work were reviewed by our staff and found to be adequate.

Pursuant to its request, the licensee was advised by Commission letter dated August 12, 1965 to proceed with the work as an emergency measure under Article 3 of the license, pending Commission action on the amended Exhibit L drawings herein under consideration. The Commission stated in its letter-permission that the start of the work and the maintenance of flows were to be in accordance with the agreement between the licensee and the Montana Fish and Game Department with respect to the construction and maintenance of flows, under which commencement of the work was to be no earlier than August 23, 1965.

The U.S. Corps of Engineers has reported that the plans of the project structures shown on the amended Exhibit L drawings are satisfactory insofar as the interest of navigation are concerned.

The Commission finds:

The following described amended Exhibit L drawings which supplement the exhibits noted herein and which are part of the license for the project, conform to the Commission's rules and regulations and should be approved as part of the license for the project.

MADISON DEVELOPMENT

Exhibit L	FPC No.	Showing	Supplementing
Modified	2188-92	Plans and cross-section of modified dam	2188-75
Modified	2188-93	Details of modifications	2188-75

The Commission orders:

The amended Exhibit L drawings described in the above finding are hereby approved as part of the license for Project No. 2188.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr. and Carl E. Bagge.

NEVADA IRRIGATION DISTRICT, PROJECT NO. 2266

ORDER APPROVING REVISED PROJECT EXHIBITS AND ADJUSTING AUTHORIZED INSTALLED CAPACITY AND ANNUAL CHARGES

(Issued November 30, 1965)

On April 12, 1965, Nevada Irrigation District, licensee for Project No. 2266, filed for Commission approval revised Exhibit L drawings L–41 and L–45, and amended Exhibit M showing the final details of the construction of the Dutch Flat No. 2 and Chicago Park Powerhouses of the project, and giving pertinent information regarding the equipment which will be installed therein.

The revised Exhibit L drawings have been corrected by our staff with the authorization of the licensee to show the equipment ratings shown on amended Exhibit M.

The proposed changes have been reviewed by our staff and found to be safe and adequate.

The effects of our approval of the revised exhibits will require the following revisions in the license for the project:

(1) revision of subparagraph (ii) of paragraph (B) of the license describing "Dutch Flat No. 2" and "Chicago Park";

(2) supersession of Exhibits L–41 (FPC No. 2266–81) and L–45 (FPC No. 2266–85) of the license by revised Exhibits L–41 (FPC No. 2266–111) and L–45 (FPC No. 2266–112);

(3) amendment of Exhibit M of the license, filed September 23, 1960, by the amended Exhibit M filed April 12, 1965, insofar as the description of powerhouse equipment for Dutch Flat No. 2 and Chicago Park are concerned; and

(4) revision of subparagraph (i) of Article 43 of the license to show an increase in the authorized installed capacity of the project from 78,800 horsepower to 81,000 horsepower.

The Commission finds:

(1) The following described revised exhibits conform to the Commission's rules and regulations and should be approved as part of the license for the project, and the exhibits referred to herein as being superseded should be eliminated from the license for the project to the extent herein indicated.

Exhibit L–41: (FPC No. 2266–111) "Dutch Flat No. 2 Powerhouse" superseding L–41 (FPC No. 2266–81).

Exhibit L–45: (FPC No. 2266–112) "Chicago Park Powerhouse" superseding L–45 (FPC No. 2266–85).

Exhibit M: filed April 12, 1965—Amended Exhibit M, in one sheet describing powerhouse equipment for Dutch Flat No. 2 and Chicago Park, superseding comparable description in Exhibit M filed September 23, 1960.

(2) The presently authorized installed capacity of the project for the purpose of computing the capacity component of the administrative annual charge is by this order increased from 78,800 horsepower to 81,000 horsepower, and the amount of annual charges, based upon such increased capacity, to be paid under the license for the project, for the costs of administration of Part I of the Act is reasonable.

The Commission orders:

(A) The revised exhibits described in finding (1) above are hereby approved as part of the license for Project No. 2266, and the exhibits described in the

same finding as being superseded are hereby eliminated from the license for the project to the extent therein indicated.

(B) Subparagraph (i) of paragraph (B) of the license is hereby revised to read as follows, insofar as the description of "Dutch Flat No. 2" and "Chicago Park" are concerned:

Dutch Flat No. 2 located on Bear River—comprised of an intake located above Drum Afterbay Dam (PG&E Co.), a conduit to a small forebay, a penstock, a powerhouse with a 31,000 horsepower turbine connected to a 23,400-KW generator installed therein, a step up transformer, a switching structure and an afterbay dam;

Chicago Park located on Bear River—comprised of an intake located above Dutch Flat No. 2 afterbay dam, a concrete flume to a small forebay, a penstock, a powerhouse with a 50,000 horsepower turbine connected to a 37,350-KW generator, a step up transformer and a switching structure;

(C) Subparagraph (i) of Article 43 of the license is hereby revised to read as follows:

(i) For the purpose of reimbursing the United States for the costs of administration of Part I of the Act, a reasonable annual charge in accordance with the provisions of Part 11 of the Commission's regulations as in effect from time to time. The authorized installed capacity for such purpose is 81,000 horsepower.

(D) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this order. In acknowledgment of the acceptance of this order, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr. and Carl E. Bagge.

ANNUAL CHARGES PRESCRIBED FOR LICENSED PROJECTS UNDER THE FEDERAL POWER ACT, DOCKET NO. R-272

ORDER NO. 309

AMENDING THE FORMULA FOR FIXING ANNUAL CHARGES TO LICENSEES UNDER § 11.20 OF THE REGULATIONS UNDER THE FEDERAL POWER ACT

(Issued November 30, 1965)*

On March 25, 1965, the Commission gave notice by publication in the Federal Register (30 F.R. 4259) that it proposed to amend § 11.20 of its Regulations under the Federal Power Act to modify the formula for fixing annual charges to non-public licensees (*i.e.*, licensees other than states or municipalities) for hydroelectric projects of more than 2,000 horsepower installed capacity to eliminate the inequities in the application of the existing formula to pumped storage projects. Comments were invited from interested persons to be submitted by April 27, 1965. In response to this notice and invitation, the Commission received comments from 3 licensees, each of whom expressed its approval of the proposed changes in the method of computing annual license charges.

---

* Published in the Federal Register on December 7, 1965 (30 F.R. 15092).

Section 10(e) of the Federal Power Act (16 U.S.C. 803(e)) requires that the Commission fix annual charges to licensees to reimburse the United States for its costs of administering Part I of the Act (16 U.S.C. 791–823). Section 11.20 of the Regulations under the Federal Power Act now provides for fixing annual charges to non-public licensees by distributing the administrative costs attributable to this class of licensee in the proportion which the "annual charge factor" for each of the projects in the class bears to the total annual charge factors for all of the projects in the class. Paragraph (a)(3) of § 11.20 prescribes the formula by which the anual charge factor for each project is found. The components of that formula are the project's authorized installed capacity (measured in horsepower) and gross annual energy output (measured in kilowatt-hours), as follows:

$$\text{Annual Charge Factor} = \text{Authorized Installed Horsepower} + 150\,\frac{\text{Gross Annual Kwh Generation}}{1{,}000{,}000}$$

A pumped storage operation involves the generation of electric energy during peak load periods by using water electrically pumped into a storage reservoir during earlier off-peak periods. Although more electric energy is consumed in pumping than is realized from generation, the generated energy is more valuable to the electric system than the pumping energy expended because of its timely delivery. Thus, after credit is allowed for the energy used in pumping, the benefits to an electric system from pumped storage facilities are only capacity benefits. Consequently, the use of annual energy output as a factor in the formula now in use causes the annual charges for administrative costs for such facilities to be disproportionately high.

Under the regulation here being adopted, the annual charge factor will be differently determined for each of three types of projects: (1) for conventional projects, the factor will continue to be computed as it now is; (2) for pure pumped storage projects, the factor will be equal to the authorized installed horsepower; (3) for mixed conventional-pumped storage projects, the factor will be found by the following formula—

$$\text{Annual Charge Factor} = \text{Authorized Installed Horsepower} + 150\,(\text{Millions of Kwh Gross Generation}) - 100\,(\text{Millions of Kwh for Pumping})$$

This formula provides that the annual energy output from pumped storage facilities will not be used to increase the annual charge factor. Because annual energy output from pumped storage facilities may not be measured in all projects, the formula estimates this output as two-thirds of the energy consumed in pumping. This proportion, which is typical of pumped storage operations, is expressed in the formula by the figures 100, by which annual pumping energy is multiplied, and 150, by which gross annual generation is multiplied.

The Commission further finds:

In view of the foregoing, and upon consideration of all relevant matters presented, this amendment is necessary and appropriate for the purposes of the Federal Power Act.

The Commission, acting pursuant to the Federal Power Act, as amended, particularly sections 10(e), 304(a) and 309 thereof (49 Stat. 842, 855, 858; 16 U.S.C. 803(e), 825c(a), 825h), *orders:*

(A) Part 11, Annual Charges, Subchapter B, Regulations Under the Federal Power Act, Chapter I, Title 18, of the Code of Federal Regulations, is

amended by amending subparagraphs (3) and (4) of paragraph (a) of § 11.20 to read as follows:

§ 11.20 Costs of administration

(a) * * *

(3) The annual charge factor for each such project shall be found as follows:

(i) For a conventional project the factor is its authorized installed capacity (horsepower) plus 150 times its annual energy output in millions of kilowatt-hours.

(ii) For a pure pumped storage project the factor is the authorized horsepower.

(iii) For a mixed conventional-pumped storage project the factor is its authorized installed capacity (horsepower) plus 150 times its gross annual energy output in millions of kilowatt-hours less 100 times the annual energy used for pumped storage pumping in millions of kilowatt-hours.

(4) To enable the Commission to determine such charges annually, each such licensee shall file with the Commission, on or before February 1 of each year, a statement under oath showing the gross amount of power generated (or produced by non-electrical equipment) and the amount of power used for pumped storage pumping by the project during the preceding calendar year, expressed in kilowatt hours.

* * * * * * *

[Sections 10(e), 304(a), 309; 49 Stat. 842, 855, 858; 16 U.S.C. 803(e), 825c(a), 825h]

(B) This amendment herein adopted shall become effective December 30, 1965.

(C) The Secretary shall cause prompt publication of this order to be made in the Federal Register.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr. and Carl E. Bagge.

PAN AMERICAN PETROLEUM CORPORATION (OPERATOR), ET AL., DOCKET NO. RI66-61[1]

ORDER DENYING APPLICATIONS FOR RECONSIDERATION AND REHEARING

(Issued November 30, 1965)

Pan American Petroleum Corporation (Pan American) on October 8, 1965, filed an application for reconsideration and rehearing of the Commission's order issued September 8, 1965, in Docket No. RI66-61 suspending proposed revenue-sharing increases of 11.7526¢ and 11.5961¢ per Mcf tendered by Pan American; which were designated as Supplement No. 21 to its FPC Gas Rate Schedule No. 57, for sales of gas to Phillips Petroleum Company (Phillips) from Texas Railroad Commission District No. 10 and The Oklahoma Panhandle area, respectively. These increases were suspended for one day from the proposed effective date of September 13, 1965, or for one day from the date that Phillips makes effective its related increased rate of 15.22¢, plus applicable

[1] This proceeding has been consolidated for hearing with Docket No. RI66-61 for the purpose of deciding the contractual issues in dispute in these proceedings as set forth in our order issued November 2, 1965, *supra*, p. 1223.

tax reimbursement, under its Rate Schedule No. 4 which is suspended in Docket No. RI65–526,[2] whichever is later. Subsequent to the issuance of this suspension order, Phillips filed on September 10, 1965, a protest requesting that Pan American's proposed rates be rejected for lack of contractual support. Pan American filed an answer to Phillips' protest contending it was contractually entitled to the filed for rate. This contractual dispute was set for hearing by order issued November 2, 1965.

In support of its application, Pan American asserts that the Commission does not have the power to provide for an indefinite suspension period which may exceed five months. Pan American also claims that the Commission's action here is contrary to that taken in an order issued February 18, 1965, in *Tenneco Oil Company (Operator), et al.*, Docket No. RI65–464, *et al.* [unreported] where the producer was permitted to place its increased rate in effect subject to refund even though the gatherer had not filed for its contractually authorized rate increase. Pan American further contends that the Commission's indefinite suspension is inconsistent with the one day suspension provided in *Kerr-McGee Oil Industries, Inc.*, Docket No. RI66–81, with respect to the sale of gas under the same Pan American-Phillips contract involved here.[3]

The alternative suspension period was provided for in the September 8 order because it appeared at that time that Pan American was not entitled as a contractual matter to place its proposed revenue-sharing rates in effect until Phillips commenced collection of its suspended increased rate in Docket No. RI65–526.[4] While we could have rejected these increases without prejudice to their resubmittal when Phillips' began collecting its increased rate in Docket No. RI65–526, it has been our policy for some time in cases involving a revenue-sharing increase where it is not known when the purchaser will make its related rate effective to provide an alternative suspension period. Such an approach protects the producer from any unreasonable delay in placing its rate in effect subject to refund once it is contractually authorized, while at the same time protecting the purchaser by not permitting the producer to place its rate in effect until it is contractually authorized.

The *Tenneco* case cited by Pan American has no applicability to revenue-sharing increases such as are involved here where the contractual authorization for the increase depends on the purchaser also receiving an increase. The periodic increases in *Tenneco* bore no direct contractual relationship to the gatherer's resale rate. There was thus no contractual dispute in that case.

The Kerr-McGee and Pan American filings were treated differently because the contractual question presented in Kerr-McGee does not depend upon Phillips' placing into effect a higher rate than its presently effective rate either under Phillips' or Kerr-McGee's interpretation of the contract. Although Pan American has contended it has contractual authority at this time to make its filing, Phillips claims it has no contractual authorization to file the proposed rates suspended herein until Phillips begins collection of the 15.22¢ rate in Docket No. RI65–526.

As indicated in our November 2 order we are unwilling to accept Pan American's contractual position pending determination of this question because if we were to shorten the suspension period Phillips would be forced to place its increased rate of 15.22¢ per Mcf in effect subject to refund in Docket No.

---

[2] Phillips could make its proposed increased rate in Docket No. RI65–526 effective but has not yet done so.

[3] Kerr-McGee's FPC Rate Schedule No. 12 covers acreage assigned by Pan American to Kerr-McGee subject to the Phillips-Pan American contract.

[4] In computing its rate Pan American utilized as part of the computation the 15.22¢ per Mcf Phillips' rate which is under suspension in Docket No. RI65–526.

RI65–526 or to absorb Pan American's rate increase.[5] The validity of the indefinite suspension period provided by us here is based on the assumption that there is no contractual basis for Pan American's filing at this time. If we conclude following the hearing on this contractual dispute that Pan American's interpretation of its contract is proper, we will then amend our suspension order to accord with that decision. We expect, of course, that the parties will cooperate, including consideration of agreeing to a stipulation of facts, to make possible a decision herein at the earliest possible date.

The Commission orders:

For the reasons set forth above, Pan American's application for reconsideration and rehearing is denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

TENNESSEE GAS TRANSMISSION COMPANY, DOCKET NO. CP66–55 AND TENNESSEE GAS TRANSMISSION COMPANY, DOCKET NO. RP66–18

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND PROVIDING FOR INTERVENTIONS AND FURTHER HEARING

(Issued November 30, 1965)

On August 19, 1965, Tennessee Gas Transmission Company (Tennessee), filed in Docket No. CP66–55 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the sale and delivery of natural gas to Pennsylvania Gas and Water Company (Penn Gas and Water) under a proposed initial Rate Schedule SS–E providing for a natural gas storage service, all as more fully set forth in the application.

Due notice of the application was published in the Federal Register on September 2, 1965 (30 F.R. 11294).

On September 23, 1965, a joint petition to intervene herein was filed by United Fuel Gas Company, The Manufacturers Light and Heat Company and The Ohio Fuel Gas Company (Petitioners). Petitioners state in the petition to intervene that a formal hearing is not requested and no objection is raised to the disposition of the proceeding under the Commission's shortened procedure method, provided the Commission incorporates conditions in the certificate order to provide that Tennessee shall not, in any rate proceeding, assess against any other class of service any deficiency in revenues under its Rate Schedule SS–E below the cost of service associated therewith and that appropriate costs of all facilities properly allocable to SS–E deliveries shall be subject to investigation and determination in a rate case or rate determination proceeding. Tennessee proposed an alternate condition, which is acceptable to Petitioners, providing (1) that the grant of the certificate requested shall not constitute a determination of the reasonableness or propriety of the rate or the form of the rate Tennessee will charge in connection with the proposed service and shall not be construed as a waiver of any of the requirements of

[5] Pan American's increase amounts to approximately $148,000 annually. It was erroneously in the September 8 and November 2 orders as amounting to $266,621. Phillips' proposed resale rate increased in Docket No. RI65–526 amounts to approximately $1,171,000 annually. Under its Rate Schedule No. 4 Phillips resells not only gas purchased from Pan American and other producers but also its own gas.

Section 4 of the Natural Gas Act, or of Section 154 of the Commission's Rules and Regulations, with respect to the service in question, and is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against Tennessee; and (2) that Commission action in this proceeding shall not foreclose nor prejudice any future proceeding or objection relating to the rate to be charged for the service herein authorized, or any position any customer of Tennessee may hereafter take with respect to the proper distribution or allocation of Tennessee's costs and expenses in a future proceeding.

On November 5, 1965, Tennessee filed a letter supplementing its application which stated that:

(1) The proposed SS–E storage service offered to Penn Gas and Water would be available to all of Tennessee's customers in Zones 4 and 5,

(2) The proposed SS–E rate was necessary in order to provide firm winter storage service to Penn Gas and Water because Penn Gas and Water could not qualify for the existing SS–5 service, and

(3) No other existing rate schedule providing winter storage service is available to adequately service Penn Gas and Water.

Tennessee seeks authorization to render a natural gas storage service to Penn Gas and Water for the delivery of a Daily Storage Quantity of 13,500 Mcf and a Winter Storage Quantity of 1,012,500 Mcf (at 15.025 psia). No additional facilities will be required because a portion of the unallocated maximum day capacity authorized at Docket No. CP65–120 will be utilized and deliveries will be made at the existing point of delivery to Penn Gas and Water.

The service will be rendered at a monthly charge composed of (a) Deliverability Charge of $1.85 times the Daily Storage Quantity, (b) Space Charge of 0.8¢ times the Winter Storage Quantity and (c) 0.5¢ per Mcf injected into or withdrawn from storage; plus a commodity charge of 27.34¢ in the Northern rate zone and 30.84¢ in the New York rate zone, per Mcf delivered.

Tennessee further proposes to reduce Penn Gas and Water's existing peak-day contract demand to 24,990 Mcf, a reduction of 4,192 Mcf from the existing contract demand.

Rate Schedule SS–5 makes available to existing contract demand customers in Tennessee's New York rate zone (Zone 5) firm deliveries, during each year's November 1–April 30 withdrawal period, of daily volumes of gas up to a specified Daily Storage Quantity, with total volumes to be delivered during the withdrawal period (Winter Storage Quantity) limited to 90 times the Daily Storage Quantity.

Tennessee proposes the new SS–E Schedule primarily to make available to Penn Gas and Water, an existing customer located in Tennessee's Northern Zone (Zone 4), a similar type of storage service now available only to Tennessee's Zone 5 customers under Rate Schedule SS–5. However, Tennessee offers to make the SS–E rate available in Zones 4 and 5, with increased commodity charges applicable in Zone 5. It appears that, if the proposed rate schedule were available only to a single customer, the rate schedule would be discriminatory and unduly preferential in violation of Section 4(b) of the Natural Gas Act. We will therefore condition the issuance of this certificate upon the requirement that the new SS–E Rate Schedule be made available in both Zones 4 and 5, with the difference in commodity charges between Zones 4 and 5, as indicated above.

It appears that the terms of Rate Schedule SS–E are more advantageous to Tennessee's customers than the terms of Tennessee's existing Rate Schedule SS–5 and, therefore, it can be presumed that Tennessee's customers currently

receiving service under Rate Schedule SS–5 will avail themselves of the new service. The dual rate structure will be allowed to continue for one year only in order to permit Penn Gas and Water to receive the service it urgently needs during the coming heating season. However, we are providing in this order for proceedings to be held in Docket No. RP66–18, being instituted herein, at which time Tennessee shall show that the proposed rate schedule is compensatory and that the rate schedule properly allocates to each zone its fair share of the cost of service.

After due notice, no petition to intervene, other than that of United Fuel Gas Company, *et al.*, notice of intervention, or protest to the granting of the application has been filed.

At a hearing held on November 26, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application submitted in support of the authorization, and upon consideration thereof the Commission, in the light of the previous discussion, finds that a certificate should be issued as hereinafter ordered and conditioned.

The Commission further finds:

(1) Tennessee Gas Transmission Company, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of July 15, 1947, in Docket No. G–910 (6 FPC 777).

(2) The proposed sale and delivery of natural gas, as hereinbefore described and as more fully described in the application in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid proposed sale and delivery of natural gas are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued herein and the rights granted hereunder be conditioned upon Tennessee's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to Tennessee Gas Transmission Company, authorizing the sale and delivery of natural gas as described above and as more fully described in the application and filings in this proceeding, subject to the jurisdiction of the Commission, upon the terms and conditions of this order. The certificate shall be effective for a period of one year from the date of issuance of this order.

(B) The grant of the certificate herein shall not constitute a determination of the reasonableness or propriety of the rate Applicant proposes to charge in connection with the service herein authorized, or of the form or forms thereof, and shall not be construed as a waiver of any of the requirements of Section 4 of the Natural Gas Act or of Section 154 of the Commission's Rules and Regulations with respect to the service herein authorized, and is without prejudice to any findings or orders which have been, or may hereafter be, made by the Commission in any proceeding now pending or hereafter instituted by or against the Applicant. Further, our action in this proceeding shall not foreclose nor prejudice any future proceeding or objection relating to the rate to

be charged for the service herein authorized, or any position any customer of Applicant may hereafter take with respect to the proper distribution or allocation of Applicant's cost and expenses in any proceeding where such distribution or allocation is in issue in determining the respective rates to be charged by Applicant for the various types and classifications of service rendered by it.

(C) Tennessee is hereby authorized to place into effect Rate Schedule SS–E for a period of one year or until otherwise authorized by the Commission in subsequent proceedings.

(D) Tennessee shall make its Rate Schedule SS–E available to all of its present customers in its Zones 4 and 5 who now purchase gas under Tennessee's SS–5 Rate Schedule.

(E) Tennessee's existing peak-day contract demand service to Pennsylvania is reduced to 24,990 Mcf.

(F) In the near future a hearing will be held in this docket at which time Tennessee shall be required to demonstrate that its SS–E Rate Schedule is compensatory and bears its fair share of Tennessee's cost of service.

(G) Tennessee shall make appropriate tariff filings for the service authorized herein in a form acceptable to the Commission.

(H) On or before February 7, 1966, Tennessee shall file its evidence in Docket No. RP66–18 to support the rates contained in Rate Schedule SS–E as being compensatory and as bearing their fair share of the cost of service for each zone.

(I) On March 7, 1966, a prehearing conference will be held at 10:00 a.m. (EST) in a hearing room of the Federal Power Commission, 441 G Street, N.W., Washington, D.C. 20426, for the purpose of delineating issues, stipulating facts, and, if necessary, of setting dates for the filing of evidence by other parties and rebuttal evidence by Tennessee.

(J) Interventions in Docket No. RP66–18 shall be filed on or before January 14, 1966.

(K) The certificate issued herein and the rights granted hereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr. and Carl E. Bagge.

CONSOLIDATED WATER POWER COMPANY, PROJECT NO. 2110

ORDER APPROVING REVISED PROJECT EXHIBIT K DRAWINGS

(Issued December 1, 1965)

On August 13, 1965, Consolidated Water Power Company, of Wisconsin Rapids, Wisconsin, filed for Commission approval revised Exhibit K drawings showing the boundary for the project, known as the Stevens Point Hydro Project No. 2110, located on the Wisconsin River, in Portage County, Wisconsin. Also filed was a revised Exhibit F showing the land rights for the project, but which does not require Commission approval.

No additional project occupancy of lands of the United States are shown on the revised drawings.

The Commission finds:

Revised Exhibit K drawings, Sheets 1 through 5 and 5A (FPC Nos. 2110–16 through –21) conform to the Commission's rules and regulations and should be approved as part of the license for the project, and the Exhibit K drawings (FPC No. 2110–3 through –8), now part of the license and which have been superseded, should be eliminated from the license for the project.

The Commission orders:

The revised Exhibit K drawings designated in the above finding are hereby approved as part of the license for Project No. 2110, and the Exhibit K drawings described in the same finding as being superseded are hereby eliminated from the license for the project.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr. and Carl E. Bagge.

PENNSYLVANIA ELECTRIC COMPANY AND THE CLEVELAND ELECTRIC ILLUMINATING COMPANY, PROJECT NO. 2280

ORDER DENYING MOTION FOR EXTENSION OF TIME IN WHICH TO FILE STATEMENT

(Issued December 1, 1965)

On September 17, 1965 this Commission issued an order granting Allegheny Electric Cooperative's petition to intervene in the proceeding on the joint application for license filed by Pennsylvania Electric Company and The Cleveland Electric Illuminating Company (Applicants) for the proposed Kinzua pumped storage plant, Project No. 2280 to be located at the Allegheny River Reservoir project, now under construction by the Corps of Engineers. By the same order, we also afforded the Cooperative an opportunity to file a statement of facts and law in support of its position on intervention. The Cooperative was given a period of thirty days from the date of the order in which to file such statement. The Applicants were afforded an opportunity to file a reply within 15 days of the filing of the Cooperative's statement.

On October 18, 1965, the last day of the thirty-day period, the Cooperative filed a "Motion for Extension of Time in Which to File Statement". In support

of its motion the Cooperative argued that it would not be in a position to file such a statement until after it has had an opportunity to study a report on the feasibility of including power generating facilities in the Allegheny River Reservoir Project, which it avers is now being prepared by the U.S. Corps of Engineers in response to a request made by the Committee on Public Works, U.S. Senate. For this reason, the Cooperative requests that its time for filing a statement be extended until sometime after the Corps of Engineers Report is made available.

The Applicants, by a filing made October 28, 1965, object to the Cooperative's motion for extension of time on the grounds that further delays would substantially increase construction costs for their proposed project and necessitate seeking alternative sources for interim power supply to serve their customer's needs. The Applicants further object that the Cooperative's motion for extension of time was not timely filed under the requirements of Section 1.13(d) of the Commission's Rules of Practice and Procedure.

Regardless of the question whether the Cooperative's motion was timely, it appears to the Commission that no useful purpose would be served by granting the proposed extension of time. On August 20, 1962 and April 13, 1965 the Director of Civil Works of the Corps of Engineers directed letters to the Commission commenting at length on the proposed project and suggesting certain license conditions and modifications. While the Commission would be disposed to study with interest any further Report from the Corps, such a Report is clearly not an essential pre-condition to Commission action on the pending application for license. There is no assurance that the awaited Corps Report would be completed at any time within the near future. We conclude therefore that the Cooperative's request for extension of time in which to file a statement of facts and law in support of its position should be denied.

In denying the Cooperative's motion for extension of time we are merely declining to hold this proceeding any longer in abeyance. We are not barring the Cooperative from filing hereafter any statement of fact and law that it may wish to present in support of its position provided such statement is filed prior to Commission action on the application for license. Such a statement by the Cooperative, will be welcomed by this Commission whether or not it incorporates an analysis of any further report which the Corps of Engineers may publish with regard to feasibility of construction by the Government of Kinzua power facilities.

The Commission finds:

Good cause has not been shown by Allegheny Electric Cooperative why its motion for extension of time should be granted.

The Commission orders:

The aforesaid motion is denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

TEXAS GAS TRANSMISSION CORPORATION, DOCKET NO. CP64-107

FINDINGS AND ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued December 1, 1965)

On August 30, 1965, Texas Gas Transmission Corporation (Applicant), filed in Docket No. CP64-107 an application to amend, as supplemented on Septem-

ber 2, 1965, the Commission's order issued May 26, 1964, 31 FPC 1292, in said docket, to authorize certain changes in the contract demands of twenty-four of its existing customers, to be effective November 1, 1965, all as more fully set forth in the application to amend in this proceeding.

The order of May 26, 1964, authorized Applicant, among other things, to increase contract demand service to existing customers in two stages, one commencing November 1, 1964, and the other commencing November 1, 1965. Applicant states herein that, as the result of recent market surveys, certain of its customers request modification of their authorized contract demands for the second stage commencing November 1, 1965.

The following eighteen customers request the increases in contract demands as set forth below:

Customer	Contract Demand Mcf at 15.025 psia		
	Authorized effective 11-1-65	Requested increase	Total requested effective 11-1-65
Jackson Utility Division, City of Jackson, Tennessee	21,811	971	22,782
Town of Covington, Tennessee	4,225	225	4,450
Town of Halls, Tennessee	1,270	150	1,420
Bells Public Utility District	800	175	975
Town of Olive Branch, Mississippi	800	85	885
Town of Henning, Tennessee	370	50	420
City of Martin, Tennessee	2,225	635	2,860
City of South Fulton, Tennessee	1,225	200	1,425
Southern Indiana Gas and Electric Company	60,000	2,000	62,000
Hoosier Gas Corporation	21,300	2,000	23,300
Boonville Natural Gas Corporation	3,455	220	3,675
City of Scottsville, Kentucky	2,500	150	2,650
City of Morganfield, Kentucky	1,760	750	2,510
City of Sturgis, Kentucky	1,020	45	1,065
Chandler Natural Gas Corporation	875	165	1,040
Western Kentucky Gas Company, (Zone 4)	7,700	190	7,890
City of Carrollton, Kentucky	3,075	225	3,300
The Cincinnati Gas & Electric Company	1,600	480	2,080
Total Increase		8,716	

The following six customers request the decreases in contract demands as set forth below:

Customer	Contract Demand Mcf at 15.025 psia	
	Authorized effective 11-1-65	Requested effective 11-1-65
Louisville Gas and Electric Company	160,000	155,000
Arkansas Louisiana Gas Company	38,590	37,692
Western Kentucky Gas Company (Zone 3)	63,000	59,215
Indiana Gas and Water Co., Inc.	83,055	80,000
City of Elizabethtown, Kentucky	6,270	5,925
Gibson County Utility District	8,250	7,900

The aggregate difference between the authorized contract demand and the requested decreases of the above six customers is 13,433 Mcf. These customers have advised Applicant that because of the installation of peak-shaving equipment, the improvement of underground storage facilities, and other changed circumstances, the contract demands as originally authorized to be effective November 1, 1965, will not be required.

312-270—69——92

No new facilities are involved for the proposed modification in contract demands.

Due notice of the filing of the application to amend and opportunity for hearing thereon has been given by publication in the Federal Register on September 16, 1965 (30 F.R. 11887). No protest or petition to intervene has been filed in this proceeding.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order issued May 26, 1964, in Docket No. CP64–107 be amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order issued May 26, 1964, in Docket No. CP64–107 is amended to authorize the proposed changes, as hereinabove set forth, in the contract demands of twenty-four of Applicant's existing customers, to be effective November 1, 1965, all as hereinbefore described and as set forth in the application to amend, as supplemented.

(B) In all other respects said order shall remain in full force and effect.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr. and Carl E. Bagge.

WISCONSIN MICHIGAN POWER COMPANY, PROJECT NO. 1759

ORDER APPROVING REVISED EXHIBIT L DRAWINGS

(Issued December 1, 1965)

On July 12, 1965, Wisconsin Michigan Power Company, licensee for Project No. 1759, filed for Commission approval revised Exhibit L drawings showing the "as completed" changes in the 69 kv electrical transmission facilities of the Twin Falls development of the project. The project is located on the Menominee River, Michigan, Wisconsin.

The changes referred to above which were necessary to improve system reliability and capacity, were authorized by Commission order issued July 8, 1964, 32 FPC 77. The licensee has advised that the changes were completed on April 30, 1965.

Exhibit L, Sheet No. 1, dated July 9, 1965 (FPC No. 1759–57) shows the electrical transmission equipment in the powerhouse with the elimination therefrom of the 69 kv transmission circuits and associated equipment. Exhibit L, Sheet 2 (FPC No. 1759–58) shows the transmission circuits and equipment connecting the power plant to the licensee's 69 kv transmission system.

The Secretary of the Army and the Chief of Engineers have approved the tracings of the project structures affecting navigation pursuant to Section 4(e) of the Federal Power Act.

The Commission finds:

(1) The following designated Exhibit L drawings conform to the Commission's rules and regulations and should be approved as part of the license for the project to the extent herein indicated:

Exhibit L, Sheet 1 (FPC No. 1759–57) entitled "Menominee River—Twin Falls Development—Power Structure". Approval only insofar as it as it shows the electrical transmission equipment in the powerhouse.

Exhibit L, Sheet 2 (FPC No. 1759–58) entitled "Menominee River—Twin Falls Development—Twin Falls Subsection".

(2) The following described Exhibit L drawing now part of the license should be eliminated from the license to the extent herein indicated:

Exhibit L, Sheet 1 (FPC No. 1759–53) entitled "Menominee River—Twin Falls Development—Power Structure". Superseded only insofar as it shows the electrical transmission equipment and circuits in and on the powerhouse.

(3) The following described exhibit now part of the license and which has been superseded should be eliminated from the license:

Exhibit L, Sheet 2 (FPC No. 1759–54) entitled "Menominee River—Twin Falls Development—Twin Falls Substation".

The Commission orders:

(A) The exhibits described in finding (1) above are hereby approved as part of the license for Project No. 1759 to the extent therein indicated.

(B) The exhibit described in finding (2) above is hereby eliminated from the license for Project No. 1759 to the extent therein indicated.

(C) The exhibit described in finding (3) above is hereby eliminated from the license for Project No. 1759.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

AREA RATE PROCEEDING (PERMIAN BASIN), DOCKET NO. AR61–1, ET AL.

ORDER DENYING MOTIONS TO STAY FILING REQUIREMENTS OF ORDERS TO SHOW CAUSE

(Issued December 3, 1965)

By order issued August 5, 1965, as modified and amended by orders issued October 12, 1965, and November 12, 1965, 34 FPC 424, 1135, 1287, the Commission ordered that certain respondents show cause why the rates prescribed in Opinion Nos. 468 and 468–A, 34 FPC 159, 1068, and the accompanying orders should not be applicable to certificate applications and rates for sales of gas made in the Permian Basin which were not consolidated in the Permian Basin case. On October 20, 1965, the Court of Appeals of the 10th Circuit stayed as to three parties the effectiveness of all of the provisions of Opinion Nos. 468 and 468–A to and including January 20, 1966. The Commission subsequently by order issued November 12, 1965, 34 FPC 1288, stayed the effectiveness of certain but not all of the provisions of Opinion Nos. 468 and 468–A as to all other respondents in the Permian Basin case. On November 17, 1965, and November 22, 1965, Gulf Oil Corporation, *et al.*, and Hunt Oil Company, *et al.*, respectively, filed motions requesting that the Commission stay the filing requirements of the show cause orders since it would be contrary to the public interest to require them to expend time, effort and money in a proceeding to show why certain orders, which have been stayed and may be reversed or modified, are not applicable to the respondents.

Good cause has not been shown for staying the filings required by the subject show cause orders. The fact that a court has granted temporary stay of the

ordering provisions of Opinion Nos. 468 and 468-A or the possibility that a stay may be granted until final court review of that opinion or that an opinion is subject to possible reversal and modification by a reviewing court is not justification for deferring further Commission action on related or similar matters. There always exists the possibility that a regulatory body may have its decisions stayed, reversed or modified, but this does not mean that the agency should defer acting on other matters pending review. Naturally, if after the conclusion of the subject show cause proceeding it should prove that stays of the resulting orders are necessary and proper they will be granted.

The Commission orders:

The motions filed in the above-designated proceeding by Gulf Oil Corporation, *et al.*, on November 17, 1965, and Hunt Oil Company, *et al.*, on November 22, 1965, are hereby denied.

Commissioner Bagge *not participating.*

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

CITY GAS COMPANY OF FLORIDA v. FLORIDA GAS TRANSMISSION COMPANY, DOCKET NO. RP65-48

ORDER DISMISSING COMPLAINT AND TERMINATING PROCEEDING

(Issued December 3, 1965)

City Gas Company of Florida (City Gas) on March 23, 1965, filed a complaint against its supplier, Florida Gas Transmission Company (Florida Gas), alleging that the latter had curtailed interruptible service to complainant on specified days while at the same time continuing interruptible service to other customers, and that such curtailment was unduly discriminatory and in contravention of the service agreement existing between buyer and seller.[1]

In an answer filed May 24, 1965, Florida Gas denied that it had subjected City Gas to unduly discriminatory treatment, admitted that it had made sales to certain interruptible customers north of Fort Pierce and upstream of the point of sale to City Gas during the period in question, but stated that physical considerations and the design of Florida Gas' system in the affected area are such that under the conditions existing at the time, the continuation of service to customers north of the area could not and did not adversely affect service therein. All customers within the area itself, with the exception of one,[2] were curtailed. Finally, the answer states that proposed changes in facilities, for which a certificate of public convenience and necessity has been applied in Docket No. CP65-165, will virtually eliminate need for similar curtailments.[3] In support of its argument Florida Gas appended detailed data and a description of its system operations.

Subsequently, City Gas filed a Notice of Withdrawal of its complaint stating that as a result of informal conferences, buyer and seller have been able to "resolve their differences."

---

[1] City Gas claims a loss in revenues of $1848, which would represent a gross income loss of $323.

[2] Florida Gas states that Miller Gas Company was overlooked by administrative oversight.

[3] See order issued June 8, 1965, in Docket No. CP65-165, 33 FPC 1223, granting certificate for construction and operation of new facilities.

On the basis of Florida Gas' answer, and the withdrawal of City Gas' complaint, it appears that the necessity for future curtailment of gas supplies by seller and the likelihood of further discriminatory treatment alleged by complainant have been obviated and that good cause therefor exists for dismissing said complaint.

The Commission orders:

(A) The Complaint filed March 23, 1965, by City Gas Company of Florida against Florida Gas Transmission Company in Docket No. RP65–48 is hereby dismissed.

(B) The dismissal of such complaint is without prejudice and is not to be deemed determinative of the rights or obligations of Florida Gas or any of its purchasers.

(C) The proceeding in Docket No. RP65–48 is hereby terminated.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

EASTERN SHORE NATURAL GAS COMPANY, DOCKET NO. CP66–108

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued December 3, 1965)

On October 12, 1965, Eastern Shore Natural Gas Company (Applicant), filed in Docket No. CP66–108 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the increases in the contract demands of several of its firm customers purchasing gas for resale under its CD rate schedule, all as more fully set forth in the application.

Applicant requests authority to increase its Contract Demand volumes to four of its existing customers, namely, Elkton Gas Service, Division of Pennsylvania and Southern Gas Company, and the Dover Gas Light Division, the Sussex Gas Division, and the Citizens Gas Division of Chesapeake Utilities Corporation. Applicant requests the additional quantities to meet its customers' requirements for increased heating and base load sales. The Commission granted Applicant temporary authority on November 4, 1965, to commence the additional sales on November 1, 1965, the beginning of the 1965–66 heating season.

The present and proposed contract demands of each customer, and the increases requested, are as follows:

	Mcf (14.7 psia)		
	Present	Proposed	Increase
Pennsylvania and Southern Gas Company Elkton Gas Service Division	900	950	50
Chesapeake Utilities Corporation			
Dover Gas Light Division	2,330	2,830	500
Sussex Gas Division	660	680	20
Citizens Gas Division	1,300	1,450	150
Total	5,190	5,910	720

Transcontinental Gas Pipe Line Corporation has been authorized previously, by letter-order issued June 25, 1965, in Docket No. CP65–181, to deliver the requested increased volumes to Eastern Shore. Transcontinental Gas Pipe Line Corporation (Transco) is Applicant's sole supplier of natural gas.

No additional facilities are involved and the proposed service will not affect Eastern Shore's service to its other customers.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on December 1, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits submitted in support of the authorization sought, and upon consideration of the record,

The Commission finds:

(1) Applicant, Eastern Shore Natural Gas Company, a Delaware corporation having its principal place of business in Salisbury, Maryland, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of November 29, 1957, in Docket No. G–12059, *et al.* (18 FPC 710).

(2) The proposed sale and delivery of natural gas by Applicant as hereinbefore described, and as more fully described in the application and exhibits in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid sale and delivery of natural gas is required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to the Applicant in this proceeding authorizing the sale and delivery of natural gas as hereinbefore described and as more fully described in the application and exhibits in this proceeding, subject to the jurisdiction of the Commission, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b) and (e) of Section 157.20 of such Regulations.

(C) The service authorized shall commence as provided by paragraph (b) of Section 157.20 of the aforesaid Regulations within 30 days of the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

HUMBLE GAS TRANSMISSION COMPANY, DOCKET NO. CP65-395; MISSISSIPPI VALLEY GAS COMPANY, COMPLAINANT, v. HUMBLE GAS TRANSMISSION COMPANY, DEFENDANT, DOCKET NO. RP66-9

ORDER INSTITUTING PROCEEDING, GRANTING MOTION TO CONSOLIDATE PROCEEDINGS AND ESTABLISHING PROCEDURE

(Issued December 3, 1965)

Mississippi Valley Gas Company (MVG), on September 2, 1965, filed a formal complaint against Humble Gas Transmission Company (Humble), in Docket No. RP66-9, alleging that paragraph 10 of the General Terms and Conditions of Humble's FPC Gas Tariff[1] is unjust, unreasonable, unduly discriminatory or preferential within the meaning of Sections 4(b) and 5(a) of the Natural Gas Act. MVG requests the Commission to "set this matter down for hearing" and to consolidate its complaint proceeding with Humble's certificate application in Docket No. CP65-395.

In its complaint, MVG alleges that, under paragraph 10, Humble maintains "an absolute veto" over its industrial load growth that subjects MVG to an undue prejudice or disadvantage, which is illustrated by Humble's application, in Docket No. CP65-395, seeking Commission authorization to construct facilities to make a direct industrial sale to Diamond National Corporation (Diamond)—a company that has located a new plant in the area served by MVG. MVG states that it sought to obtain written consent from Humble under paragraph 10 to serve the natural gas requirements of this new plant, but was refused consent to make this sale.

Humble, on October 1, 1965, filed an answer to the complaint, in which it states that its service agreements with MVG and its other G-1 customers do not contain volumetric limitations, which are imperative for the protection of Humble against distributors' requirements that exceed the capability of Humble's facilities or would prove uneconomical. As to the proposed MVG sale to Diamond, Humble states that the needed additional volumes required to make that sale were available only at a rate in excess of its G-1 rate and that its contract with Diamond is in the public interest inasmuch as the increased incremental purchased gas costs are recovered exclusively from Diamond and are not borne by Humble's other customers. Humble also alleges that paragraph 10 is *per se* just, reasonable, and non-discriminatory.

The pleadings leave unresolved substantial questions of fact and law bearing upon issues evoked by conflicting contentions concerning paragraph 10, whether, among other things, paragraph 10 subjects MVG and Humble's other G-1 customers to any undue prejudice, disadvantage, or discrimination. Therefore, it appears that a public hearing should be held in order to afford all parties opportunity to present evidence concerning the issues raised by those pleadings.

Humble, on November 2, 1965, filed a motion in the above-entitled proceedings requesting the Commission to consolidate the complaint proceeding with the proceeding involved in Docket No. CP65-395. By order issued September

[1] Paragraph 10 of the General Terms and Conditions of Humble's tariff reads as follows:

> Buyer shall not sell gas purchased under Seller's Rate Schedule G-1 to any one industrial consumer in excess of 100,000 cubic feet per month except by written consent of Seller.

17, 1965, in Docket No. CP65–395, 34 FPC 873, Humble was ordered to show cause "why the Commission should not find and determine that [paragraph 10] in [its] filed tariff is unjust and unreasonable." In its motion, Humble states that MVG, in its formal complaint, requested consolidation of these proceedings and that these proceedings appear to raise a common question.

On November 12, 1965, MVG filed an answer to the motion for consolidation requesting the Commission to deny that motion. MVG there asserts that the order issued September 17, 1965, in Docket No. CP65–395 relates to the issue of the reasonableness of paragraph 10 as well as the issue of certificating the proposed sale to Diamond, and, therefore, a determination of the discrimination issue in Docket No. CP65–395 "will almost certainly make further proceedings unnecessary in" Docket No. RP66–9. However, MVG does not seek to withdraw its complaint nor does it suggest any other procedure for disposing of its complaint. Additionally, MVG, in its answer, alleges that no useful purpose will be served by consolidation inasmuch as consolidation will result in a delay of the proceedings and will result in considerable controversy as to which party has the burden of proving discrimination or the lack of it.

MVG's objections to consolidation are without merit. The issue involved, *i.e.*, the propriety of paragraph 10, is common in both proceedings, and therefore, should be tried in one proceeding. Any alleged conflict that may arise during the consolidated proceedings as to which party has the burden of proof or the burden of going forward with the evidence can be resolved by the Presiding Examiner. Furthermore, the possibility of such conflict does not warrant the trial of the same issue in two separate hearings.

The Commission finds:

It is necessary and proper in the public interest and to aid in the enforcement of the provisions of the Natural Gas Act that the issues raised by the complaint filed by MVG be set for public hearing; that the complaint proceeding be consolidated with the proceeding involved in Docket No. CP65–395 for purposes of hearing and decision; and that the consolidated proceedings be tried in accordance with the procedures set out below.

The Commission orders:

(A) Pursuant to the authority of the Natural Gas Act, particularly Sections 4, 5, 15, and 16 thereof, the Commission's Rules of Practice and Procedure, and the Regulations under the Natural Gas Act [18 CFR, Chapter I] a public hearing shall be held on a date to be fixed by notice from the Presiding Examiner concerning the issues raised in the formal complaint filed by MVG in Docket No. RP66–9.

(B) The motion to consolidate the proceedings involved in Docket No. RP66–9 with the proceeding in Docket No. CP65–395 filed by Humble on November 2, 1965, is granted and those proceedings are consolidated for the purposes of hearing and decision.

(C) The time for filing of evidence as prescribed by our order issued September 17, 1965, in Docket No. CP65–395, is modified as follows: Humble, in Docket No. CP65–395, and MVG, in Docket No. RP66–9, shall file their direct testimony and exhibits with the Presiding Examiner on or before January 10, 1966, and shall serve copies upon all other parties in the consolidated proceedings.

(D) Pursuant to Section 1.18 of the Commission's Rules of Practice and Procedure, a pre-hearing conference before the Presiding Examiner shall

commence at 10:00 a.m. (EST) on January 18, 1966, in a Hearing Room of the Federal Power Commission, 441 G Street NW., Washington, D.C. 20426, for the purpose of reaching such agreements as will expedite the determination to be made herein, including, but not limited to, stipulation of facts, narrowing and defining of issues, and establishment of dates for the service of answering and rebuttal testimony and for the cross-examination of all testimony.

(E) The cross-examination, when commenced, shall be continuous unless the Presiding Examiner finds that extraordinary circumstances preclude such procedure.

(F) Presiding Examiner Harry W. Frazee, or any other officer designated by the Chief Examiner for the purpose (see Delegation of Authority, 18 CFR 3.5(d)), shall prescribe other relevant procedural matters not herein provided, shall preside at the prehearing conferences and at the hearing in these matters, and shall control these proceedings until the completed record is certified to the Commission, pursuant to the Commission's Rules of Practice and Procedure.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

NORTHERN NATURAL GAS COMPANY, DOCKET NOS. G–17485, G–17486; TOWN OF MANILLA, IOWA, DOCKET NO. RP64–46

ORDER DENYING APPLICATION FOR REHEARING

(Issued December 3, 1965)

On November 12, 1965, Metropolitan Utilities District of Omaha and Minneapolis Gas Company (Interveners) filed a joint application for rehearing of the Commission's Opinion No. 479 and accompanying order issued in this proceeding on October 14, 1965, 34 FPC 1139, which, among other things, granted reductions in the third-year contract demands heretofore authorized for certain small customers of Northern Natural Gas Company. Interveners argue, *inter alia*, that granting such reductions unlawfully discriminates against them, burdens them with excessive and unjustified costs, and is otherwise unsupported by the facts and contrary to law.

Interveners' material arguments are sufficiently answered in Opinion No. 479, and in the Presiding Examiner's initial decision issued herein on July 1, 1965, and no useful purpose would be served by any further discussion of them.

The Commission finds:

The assignments of error and grounds for rehearing set forth in Interveners' application for rehearing present no facts or legal principles which would warrant any change or modification in the Commission's Opinion No. 479 and accompanying order.

The Commission orders:

The above-described application for rehearing of Opinion No. 479 and accompanying order issued in this proceeding on October 14, 1965, is denied.

Commissioner Ross *not participating.*

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

TEXAS EASTERN TRANSMISSION CORPORATION, DOCKET NO. CP66-90

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued December 3, 1965)

On October 4, 1965, Texas Eastern Transmission Corporation (Applicant), filed in Docket No. CP66-90 a "budget-type" application pursuant to Section 7(c) of the Natural Gas Act, as implemented by Section 157.7(b) of the Regulations under the Act, for a certificate of public convenience and necessity authorizing the construction and operation of certain natural gas facilities, all as more fully set forth in the application.

Applicant seeks authorization to construct and operate facilities to enable Applicant to take into its pipeline system natural gas which it purchases in the general area of its system from time to time during the calendar year 1966, as the gas becomes available to it, in order to enable Applicant to maintain adequate gas reserves with which to meet the existing and future requirements of its customers.

Applicant states that it does not seek authorization by the instant application to make any new or additional sales of natural gas under the Natural Gas Act.

The total cost of Applicant's proposed construction under the application is not to exceed $5,000,000, with no single project to exceed $500,000, and will be financed from funds on hand.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on December 1, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Texas Eastern Transmission Corporation, a Delaware corporation having its principal place of business in Shreveport, Louisiana, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of March 30, 1949, in Docket No. G-1089 (8 FPC 228).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit within 60 days after the expiration of the authorization granted hereinafter, statements under oath in compliance with Section 2.58(c) of the Commission's Rules of Practice and Procedure under the Natural Gas Act.

(6) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(7) The authorization hereinafter granted should be limited to construction during the calendar year 1966 and the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $5,000,000, with no single project to exceed a cost of $500,000.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity is issued authorizing Applicant Texas Eastern Transmission Corporation to construct during the calendar year 1966 the proposed facilities hereinbefore described, as more fully described in the application in this proceeding, and to operate such facilities only to take natural gas supplies from producers who have received authorization from the Commission to sell natural gas to said Applicant.

(B) Applicant shall submit within 60 days after the expiration of the authorization granted by paragraph (A) above statements under oath in compliance with Section 2.58(c) of the Commission's Rules of Practice and Procedure under the Natural Gas Act.

(C) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(D) The authorization granted in paragraph (A) above is limited to construction during the calendar year 1966, and the total expenditures for facilities to be constructed thereunder are limited to a maximum of $5,000,000, with no single project to exceed a cost of $500,000, and shall not be interpreted as authorization to attach new customers or to increase the volume of sales to existing customers.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

THE DETROIT EDISON COMPANY AND CONSUMERS POWER COMPANY, DOCKET NO. E-7234

ORDER PERMITTING APPEAL FROM RULING OF THE PRESIDING EXAMINER

(Issued December 6, 1965)

This order allows an appeal by Commission staff from a procedural ruling of the presiding examiner entered September 29, 1965, limiting the scope of staff's pre-trial examination of Mr. Walter H. Fuller, System Operator The

Detroit Edison Company. In doing so, we reverse the ruling of the examiner and refer the matter back for further proceedings by the examiner consistent with the views expressed herein.

Staff's Appeal was filed November 2, 1965. The Detroit Edison Company and Consumers Power Company support the examiner's action by their joint reply filed November 12, 1965.

In substance, the examiner concluded that in determining the ultimate issues herein, whether the two respondent companies are "public utilities" within the meaning of the Federal Power Act, he is obligated to limit this hearing and investigation adducing facts on unidirectional power transaction patterns allowing consideration of possible power flows from Atlantic seaboard states to the State of Michigan, but excluding consideration of possible reverse flows.

In our opinion, staff's Appeal meets the stringent requirements of Section 1.28 of the Rules of Practice and Procedure limiting interim appeals from rulings of the presiding examiner to those extraordinary circumstances where prompt decision by the Commission is necessary to prevent detriment to the public interest. As respondent companies' joint reply notes, this Commission does not favor such appeals.

Here we are persuaded that the examiner's erroneous construction of the Commission order directing this investigation and hearing issued July 20, 1965, 34 FPC 83, must be corrected at the earliest possible time. Detriment to the respondent companies, staff and Commission will ensue unless this investigation and hearing, now in the pre-trial stage, is untrammeled and free from any artificial restraint such as limiting the facts to be developed in the hearing to those narrative factual recitals set forth in the Commission's order of July 20, 1965. Presently, the schedule for service of testimony in this proceeding calls for service of staff's direct presentation on or before January 17, 1966, and service of respondent companies' direct cases on or before March 1, 1966. Resolution of the questions raised by the examiner's ruling at this time will permit all parties to properly address factual and legal questions raised by our order issued July 20, 1965.

We there directed: "* * * an investigation and hearing * * * to determine whether Detroit and Consumers are each a 'public utility' within the meaning of, and subject to the requirements of the Federal Power Act." Recitation of factual assertions contained in the recital portion of our order indicates nothing more than the reason for our concern and the need for the further hearing and investigation which we there directed.[1]

Particular facts which are to be developed in the record in this proceeding are those relevant and material to the issues of whether The Detroit Edison Company and Consumers Power Company are public utilities within the meaning of Section 201(e) of the Federal Power Act; *i.e.*, whether those companies each own or operate facilities for the transmission or sale at wholesale of

[1] Our order noted in part (p. 83):

* * * It further appears that each of the systems maintains a high voltage transmission network and these networks are interconnected at three points with each other and the resulting transmission network of the Michigan Pool is connected at two existing points with the transmission network of the Ontario Hydro System. * * * It also appears that through Ontario Hydro's high voltage transmission network the Michigan Pool is connected to the high voltage transmission networks of 140 major electric systems in the United States organized in three groups commonly known as CANUSE, PJM and the Interconnected System Group, all operating in synchronism and that as a result of the operation of these interconnections, Detroit and Consumers may own or operate facilities for the interstate transmission and sale for resale of electric energy transmitted from New York and consumed in Michigan. * * *

electric energy in interstate commerce.[2] Whether The Detroit Edison Company and Consumers Power Company own or operate such facilities may depend upon electric energy being transmitted from states along the Atlantic seaboard through interconnecting facilities of the Ontario Hydro Electric Commission to facilities of the two companies located within the State of Michigan or transfers in the opposite direction. Clearly a full development of all facts bearing on these questions is directed by our order issued July 20, 1965.

In reversing the ruling of the presiding examiner and referring this matter back for further consideration, we find it unnecessary to direct the examiner to instruct Mr. Walter H. Fuller to respond to staff counsel's proposed question.[3]

The Commission orders:

(A) Staff's Appeal from the September 29, 1965 ruling of the presiding examiner is allowed, that ruling is reversed and this matter is referred back to the examiner for further proceedings.

(B) As a part of the investigation and hearing provided by order of the Commission issued July 20, 1965, the presiding examiner shall afford staff counsel opportunity to resubmit the question as referred to above for further consideration of the examiner, and counsel for Mr. Walter H. Fuller, or The Detroit Edison Company, in the light of the views expressed herein.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

UNION PRODUCING COMPANY, DOCKET NOS. G–13811 AND G–18354, ET AL.

ORDER AMENDING ORDER APPROVING SETTLEMENT

(Issued December 6, 1965)

On November 16, 1965, Union Producing Company (Union) filed a motion in the above-docketed proceedings requesting amendment of the Commission's order of December 23, 1964, 32 FPC 1506, herein accepting an offer of settlement for certain of Union's currently effective FPC Gas Rate Schedules. In that order we directed Union to retain some of the monies required to be refunded and permitted it to commingle such funds with its general assets and use them for its corporate purposes at an interest rate of 6% per annum from February 5, 1965, to the date on which they are paid over to the person or persons ultimately determined to be entitled thereto in a final order of the Commission.

Union now requests that we amend the order of December 23, 1964, to conform with our determination in Opinion No. 468, *Area Rate Proceeding*, Docket No. AR61–1, *et al.*, 34 FPC 159 (issued August 5, 1965) that the proper

[2] Section 201(c) of the Federal Power Act provides that "* * * electric energy shall be held to be transmitted in interstate commerce if transmitted from a State and consumed at any point outside thereof; but only insofar as such transmission takes place within the United States."

[3] Staff's Appeal sets forth the following proposed question:

Q. Have you ever written an instruction to [the] dispatcher[s] which ask [them] to [in]quire at a time when you are trying to arrange an outward schedule to Ontario whether or not [the Ontario dispatcher] has an outward schedule to Niagara-Mohawk?

rate of interest for refund monies so retained and commingled with general corporate funds was 4.5% per annum, that being the prime rate of interest as fixed by the Federal Reserve Board. It is appropriate that we accordingly amend the order of December 23, 1964, to so provide.

The Commission orders:

(A) The Motion for Amendment of the order issued in these proceedings on December 23, 1964, filed by Union on November 16, 1965, is granted.

(B) Ordering Paragraph (F) of the order issued herein on December 23, 1964, is amended so as to provide for an interest rate of 4.5% per annum in lieu of 6% per annum from February 5, 1965, to the date on which the refund monies ordered to be retained are paid over to the person or persons ultimately determined to be entitled thereto in a final order of the Commission.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

CRISP COUNTY POWER COMMISSION, PROJECT NO. 659

ORDER APPROVING REVISED PROJECT M EXHIBIT AND MODIFYING LICENSE

(Issued December 7, 1965)

On September 18, 1965, Crisp County Power Commission, licensee for Project No. 659, filed for Commission approval a revised Exhibit M. The project is located on the Flint River in Crisp County, Georgia.

The revised exhibit shows the modifications proposed to be made by the licensee to transmission line "B". Approximately 10 miles of the line will be rebuilt on its present right-of-way with single-pole structures and its entire length will be reconductored.

In the interest of public safety we are by this order adding a new article to the license.

The Commission finds:

(1) The following described revised Exhibit M, which supplements the license Exhibit M, conforms to the Commission's rules and regulations and should be approved as part of the license for the project:

Exhibit M: entitled, "Revised Exhibit M", one typewritten page, dated September 17, 1965.

(2) Modification of the license for the project as herein ordered is in the public interest.

The Commission orders:

(A) The revised Exhibit M described in finding (1) above is hereby approved as part of the license for Project No. 659.

(B) The following article is hereby added to the license for the project:

Article 36. Licensee shall within six months from the effective date of this amendment:

(1) raise the transmission lines over the Flurnoy Branch arm of the reservoir or any other part of the reservoir to a minimum elevation of 576 feet (project data);

(2) take such other action as may be appropriate to avoid injury to persons using the reservoir for navigational and recreational purposes;

(3) submit for Commission approval revised Exhibits F, J, K, M, and L (reflecting the raised transmission lines), in conformance with the Commission's rules and regulations.

(C) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this order. In acknowledgment of the acceptance of this order, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

NIAGARA MOHAWK POWER CORPORATION, PROJECT NO. 2330

ORDER APPROVING PROJECT EXHIBIT M–1

(Issued December 7, 1965)

Pursuant to Article 32 of its license for Project No. 2330, Niagara Mohawk Power Corporation filed on June 30, 1965 for Commission approval Exhibit M–1 drawings showing five transmission facilities to be included in the license as parts of the constructed project works. The project is located on the Raquette River in St. Lawrence County, New York.

The five transmission facilities shown on the Exhibit M–1 drawings were found by the Commission in its license order issued July 15, 1964 to be parts of the project within the meaning of Section 3(11) of the Federal Power Act, and Article 32 of the license required the licensee to file for their inclusion in the license within one year from the date of issuance of the license.

The five transmission facilities are described in the license and are shown on Exhibit M–1 as being: (1) the 23 kv Norwood—Norfolk line; (2) the 23 kv East Norfolk—Norfolk line; (3) the short Norfolk 2.4 kv underground cable; (4) the Raymondville-Norfolk 115 kv line; and (5) the 23 kv substations at Norwood and East Norfolk and the 115 kv substation at Raymondville.

The Commission finds:

Exhibit M–1 dated June 9, 1965 in four drawings (Drawings Nos. 24192, 24191, 24187 and 24178, entitled "Operating Diagram"), conform to the Commission's rules and regulations and should be approved as part of the license for the project, and Exhibit M Drawing Nos. 24192, 24191, 24187 and 24178, entitled "Operating Diagram", now part of the license and which have been superseded, should be eliminated from the license for the project.

The Commission orders:

The Exhibit M–1 drawings described in the above findings are hereby approved as part of the license for Project No. 2330, and the Exhibit M drawings described in the same finding as being superseded are hereby eliminated from the license for the project.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

COLUMBIAN FUEL CORPORATION, DOCKET NO. G-14101, ET AL.;[1] CITIES SERVICE OIL COMPANY, DOCKET NO. G-20302, ET AL.[1]

ORDER APPROVING RATE SETTLEMENT PROPOSAL, SEVERING AND TERMINATING PROCEEDINGS AND PRESCRIBING REFUNDS

(Issued December 8, 1965)*

There is before us for consideration a Motion for Approval of Settlement Proposal, Termination of Rate Proceedings, and for Shortened Procedure Certification filed on October 4, 1965, as supplemented on November 2, 1965, by Columbian Fuel Corporation and Cities Service Oil Company (Respondents) in accordance with Section 1.18(e) of the Commission's Rules of Practice and Procedure. The joint proposal involves seventy currently effective rate schedules in eight of the areas set forth in the Commission's Statement of General Policy No. 61-1, as amended, 18 CFR 2.56, and the states of Kentucky, Maryland and Pennsylvania. There are thirty-one pending proposed rate increases relating to these rate schedules. In summary the settlement proposal filed by Respondents provides:

(1) Settlement rates, including tax reimbursement, to an affiliate, Cities Service Gas Company, based upon cost of service studies utilized by parties to these proceedings, and settlement rates, including tax reimbursement, equal to or less than the applicable increased or initial price ceilings to non-affiliated purchasers, except for two exceptions hereinafter discussed.

(2) Respondents waive the right to file for contractually authorized increased rates until April 1, 1968, for all of the rate schedules involved in the settlement. However, Respondents reserve the right to file for any contractually authorized increased rates at an earlier date if the period of suspension is legislatively extended beyond the present five month period.

(3) Respondents propose to refund all amounts, collected subject to refund, in excess of the proposed settlement rates, with applicable interest.

(4) Respondents reserve the right to file during the moratorium period any contractually authorized increased rate up to the applicable area ceiling, or to any revised ceiling, and to file for any contractually authorized tax reimbursement to which they may become entitled as a result of any change in applicable tax laws.

Settlement rates which are exceptions to the applicable area ceilings are proposed by Columbian Fuel Corporation (Columbian) for two sales of natural gas in the Kansas Hugoton Field. One is a sale to Panhandle Eastern Pipe Line Company (Panhandle) and the other is a sale to Colorado Interstate Gas Company (CIG). The sale to Panhandle is made under Columbian's FPC Gas Rate Schedule No. 33, at a presently effective rate of 12¢ per Mcf, being collected subject to refund, which was renegotiated by the parties in February, 1959, at which time Columbian dedicated approximately 44,000 acres of deeper reserves to the sale, to be developed and sold at a rate of 14¢ per Mcf for the intermediate horizons, and 16¢ per Mcf for the deepest productive horizons. Subsequently, Columbian developed the intermediate horizons, and

[1] The additional dockets involved herein are set forth in the appendices hereto.

*Rehearing and Reconsideration denied by order issued January 25, 1966, 35 FPC 149.

gas is presently being sold and delivered to Panhandle at the initial rate of 14¢ per Mcf under Columbian's FPC Gas Rate Schedule No. 36. The dedicated horizons underlying the intermediate horizons have not as yet been developed. As a part of its settlement proposal, Columbian proposes that the rate for all of the gas to be produced and sold from all dedicated horizons be 12¢ per Mcf. This is similar to circumstances which we considered in *Cities Service Production Company, et al.*, Docket No. G–9510, *et al.*, 28 FPC 1114, and *Socony Mobil Oil Company, Inc.*, Docket No. G–12193, *et al.*, 31 FPC 1101 where we granted exceptions to the applicable area ceiling, and we, therefore, approve the proposed settlement rate of 12¢ per Mcf of natural gas.

The sale to CIG in the Kansas Hugoton Field being made under Columbian's FPC Gas Rate Schedule No. 34 was renegotiated by the parties in November, 1959, at which time Columbian dedicated approximately 10,000 acres of deeper reserves to this sale at a rate which would be currently 16¢ per Mcf of natural gas. The presently effective rate for gas being produced from the now productive shallow horizons is 13.5¢ per Mcf being charged and collected subject to refund. The circumstances surrounding this sale are the same as those noted above regarding the sale to Panhandle, and, therefore, we approve the proposed settlement rate of 12¢ per Mcf of natural gas produced and sold from all dedicated horizons.

With respect to refunds, the parties to the settlement conferences utilized cost of service studies and revenues based on each of Respondents' revenue-cost relationship. These studies indicate that we should require, as Repondents propose, that all monies collected subject to refund above the settlement rates be refunded. However, for all of the reasons set forth in our order in *Humble Oil & Refining Company*, Docket No. G–9287, *et al.*, 32 FPC 49, we shall require each Respondent to retain certain monies due and owing its respective purchasers except such as are payable to Panhandle and Northern Natural Gas Company until further order of the Commission directing the nature of their disposition. The refunds will approximate $1,163,000 exclusive of applicable interest, and the estimated annual reduction of revenues to Respondents will be $295,000 under the settlement proposal.

The settlement proposal includes one sale for which issuance of a certificate of public convenience and necessity is pending in Docket No. CI65–820. This is a sale made by Columbian to United Fuel Gas Company under its FPC Gas Rate Schedule No. 79 in the Scott Smith "O" Field, Kentucky. We shall set the related application for abridged hearing in accordance with Section 7 of the Natural Gas Act, providing that the settlement rate shall be the initial rate.

We believe that the principles underlying the present settlement proposal are consistent with the public interest and the provisions of the Natural Gas Act, and consequently shall approve the same.

Our action herein should not be construed as constituting approval of any future rate increases, if any, that may be filed under the subject rate schedules, and is without prejudice to any findings or order of the Commission in future proceedings, including area rate or similar proceedings, involving Respondents' rates and rate schedules, their successors or assignees.

The Commission finds:

The proposed settlement of the subject proceedings on the basis described herein, as more fully set forth in the Settlement Proposal filed by Respondents on October 4, 1965, as supplemented on November 2, 1965, is in the public in-

terest and it is appropriate in carrying out the provisions of the Natural Gas Act that it be approved and made effective as hereinafter ordered, and good cause exists for approving the settlement rates, for severing and terminating certain proceedings and for providing for refunds.

The Commission orders:

(A) The joint offer of settlement filed with the Commission by Respondents on October 4, 1965, as supplemented on November 2, 1965, is approved in accordance with provisions of this order.

(B) Respondents shall file, within 90 days from the date of issuance of this order, notices of change in rates under their FPC Gas Rate Schedules to reflect the settlement rates and executed contract amendments in accordance with the terms of this settlement proposal as approved herein including amendments to those rate schedules for sales to CIG to provide for the measurement of the Btu content of the gas consistent with the standard required in Opinion No. 464, *Texaco Inc., et al.*, Docket No. G–8087, *et al.*, 33 FPC 1228. The notices of change and the contractual amendments shall be submitted in accordance with Part 154 of the Commission's Regulations under the Natural Gas Act.

(C) Respondents shall compute the difference between the rates collected subject to refund and the settlement rates for the sales for which it proposes to make refunds with applicable interest to the date of this order, and shall within 45 days from the date of issuance of this order submit a report to the Commission, with a copy to its jurisdictional pipe line purchasers, setting out the amount of refunds (showing separately the principal and applicable interest) the bases used for such determination, the period covered, and ten days thereafter shall submit to the Commission a copy of a letter from its jurisdictional pipeline purchasers agreeing to the correctness of such amounts.

(D) Respondents shall retain those amounts of monies shown in the report required under Ordering Paragraph (C) above, subject to further order of the Commission, except that the amounts due and owing, with applicable interest to the date of this order, for the periods set forth under the heading "Period of Refunds to be Released" on Appendix C, attached hereto, shall be refunded within ten days after receiving the letters from their jurisdictional pipeline customers required by Ordering Paragraph (C) above.

(E) Respondents may deposit the retained refunds in a special escrow account, and shall tender for filing within 60 days of the date of issuance of this order an executed Escrow Agreement, conditioned as set out below, accompanied by a certificate showing service of a copy thereof upon its jurisdictional pipeline customers. Unless notified to the contrary by the Secretary within 30 days from the date of filing thereof, the Escrow Agreement shall be deemed to be satisfactory and to have been accepted for filing. The Escrow Agreement shall be entered into between Respondents and any bank or trust company used as a depositor for funds of the United States Government and the agreement shall be conditioned as follows:

(1) Respondents, the bank or trust company, and the successors and assigns of each, shall be held and formally bound unto the Federal Power Commission for the use and benefit of those entitled thereto, with respect to all amounts and the interest thereon deposited in the special escrow account, subject to such agreement, and such bank or trust company shall be bound to pay over to such person or persons as may be identified and designated by final order

of the Commission and in such manner as may be therein specified, all or any portion of such deposits and the interest thereon.

(2) The bank or trust company may invest and reinvest such deposits in any short-term indebtedness of the United States or any agency thereof or in any form of obligation guaranteed by the United States which is, respectively, payable within 120 days as the said bank or trust company in the exercise of its sound discretion may select.

(3) Such bank or trust company shall be liable for such interest as the invested funds described in Paragraph (2) above will earn and no other interest may be collected from it.

(4) Such bank or trust company shall be entitled to such compensation as is fair, reasonable and customary for its services as such, which compensation shall be paid out of the escrow account to such bank or trust company. Said bank or trust company will likewise be entitled to reimbursement for its reasonable expenses necessarily incurred in the administration of this escrow account, which reimbursement shall be made out of the escrow account.

(5) Such bank or trust company shall report to the Secretary quarterly, certifying the amount deposited in the bank or trust company for the quarterly period.

(F) If either of Respondents elects to commingle the retained refunds with its general assets and use them for business purposes, it shall notify the Secretary of the Commission of its intention to do so within sixty days of the issuance of this order, and shall pay interest on such monies at the rate of 4.5% per annum from the date of issuance of this order to the date on which they are paid over to the person or persons ultimately determined to be entitled thereto by final order or orders of the Commission.

(G) Upon notification by the Secretary of the Commission that each of the Respondents has complied with the terms and conditions of this order, the Section 4(e) proceedings in Appendix A hereto shall terminate, and the proceedings in Appendix B hereto shall be severed from their respective consolidated proceedings.

(H) The acceptance by the Commission of Respondents offer of settlement is without prejudice to any findings or determinations that may be made in any proceeding now pending, or hereafter instituted by or against Respondents and is without prejudice to claims or contentions which may be made by Respondents, the Commission staff, or any affected party hereto, in any proceeding.

*Initial rate.
**Rate subject to upward Btu adjustment.
***The settlement rates set out herein, unless otherwise noted, are total rates, subject to reductions in the manner and in the amounts set out in the respective rate schedules, where applicable under conditions of sale and/or delivery.
[1] Current effective rate is 15.0 cents per Mcf for that acreage acquired from William L. Graham Co. only. The 16.0 cents per Mcf rate, subject to refund under Docket No. RI60-67 applies to all other acreage under rate schedule No. 2. 17.0 cents per Mcf rate now suspended in Docket No. RI65-557.
[2] Supplemental agreement dated November 30, 1960 provided for a change in measurement pressure base from 16.4 psia to 14.65 psia and a change in rate from 11.5 cents per Mcf at 16.4 psia (10.27 cents per Mcf at 14.65 psia) to 12.5 cents per Mcf at 14.65 psia.
[3] Rate applicable to depths above the base of the Chase Group only. Contract further provides for a 14.0 cents per Mcf initial rate for gas produced from depths below the base of the Chase group down to the top of the Morrowan Series, and a 16.0 cents per Mcf initial rate for gas produced from depths below the top of the Morrowan Series.
[4] Rate applicable to depths above the base of the Morrow Group only. Contract further provides for a 15.0 cents per Mcf initial rate with a upward Btu provision for gas produced from depths below the base of the Chase Series. No filings have been made for gas produced from this deeper interval and price has escalated to 16.0 cents per Mcf.
[5] For gas from wells completed prior to 1-1-51.
[6] For gas from wells completed or deepened after 1-1-51.
[7] Increased rate allowed by Commission order dated 6-19-61.
[8] Increased rate allowed by Commission order dated 8-29-61.
[9] Initial rate as conditioned by temporary certificate issued 3-19-65.
[10] Rate established by order dated 12-23-63 issuing Permanent certificate.
[11] Successor to Hugoton Plains Natural Gas Company.
[12] There is a 1.0 cent per Mcf charge deducted from this rate for compression.
[13] Rate is 1.1166 cents per Mcf less than the buyers resale rate. The Commission approved predecessors offer of settlement at 15.75 cents per Mcf.
[14] Rate filing to 12.0 cents per Mcf filed 9-24-65 suspended in Docket No. RI66-106.
[15] Rate at contract pressure base of 15.025 psia.
[16] Rate at contract pressure base of 15.2 psia.
[17] Rate at contract pressure base of 14.9 psia for all gas under contract except gas purchased from Rudder Oil & Gas Company.
[18] Rate at pressure base of 15.325 psia for gas purchased from Rudder Oil & Gas Company.
[19] Rate increase allowed by Commission order dated 3-1-61.
[20] For gas purchased from November 1 through April 30.
[21] For gas purchased from May 1 through October 31.
[22] Rate at contract pressure base of 14.73 psia.
[23] 14.0 cents per Mcf rate suspended in Docket No. RI65-451.
[24] 17.0 cents per rate suspended in Docket No. RI65-557.
[25] Docket No. G-20302 is to be terminated only insofar as Cities Service's interest is concerned.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

ANNUAL REPORTS OF CLASSES A, B, C AND D NATURAL GAS COMPANIES SUBJECT TO THE NATURAL GAS ACT—MISCELLANEOUS AMENDMENTS TO F.P.C. FORMS NO. 2 AND NO. 2-A, DOCKET NO. R-283

ORDER NO. 310

AMENDING ANNUAL REPORT NO. 2 AND NO. 2-A

(Issued December 8, 1965)*

On September 20, 1965, the Commission issued a notice of proposed rulemaking in this proceeding (30 F.R. 12361, September 28, 1965), wherein it proposed to amend several of the schedules in FPC Form No. 2 and FPC Form No. 2-A, the annual reports required by §§ 260.1 and 260.2, respectively, of the Regulations under the Natural Gas Act to be made by natural gas pipeline companies subject to the Natural Gas Act.

The changes proposed in the notice were, for the most part, in response to suggestions made by representatives of the natural gas industry and were designed to minimize existing reporting requirements. Among the changes proposed, however, were others, more fully described in the notice, which were designed to supply additional information to assist the Commission in the proper performance of its responsibilities under the Act.

Many of the comments filed offer criticisms of the items in the latter class of proposals and we shall consider those in the future course of this proceeding.** In the meantime there is no reason to delay incorporation of the other changes in the form for the reporting year 1965.

The Commission finds:

The amendments to the annual report form here prescribed are necessary and appropriate for the administration of the Natural Gas Act.

The Commission, acting pursuant to the provisions of the Natural Gas Act, as amended, particularly sections 10 and 16 thereof (52 Stat. 826, 830; 15 U.S.C. 717i, 717o), *orders:*

(A) Annual Report FPC Form No. 2, prescribed by § 260.1(a), Subchapter G, Chapter I, Title 18 of the Code of Federal Regulations, is amended as follows:

1. In General Instruction 14, delete the sentence reading "If B.t.u. reported by respondent was determined on a different basis, explain such different basis.".

2. In schedule (page 201) entitled "Nonutility Property (Account 121)", instruction paragraph 4. is amended to read as follows:

> List separately any property previously devoted to public service having an original cost of $150,000 or more and give date of transfer to Account 121, Nonutility Property. Other items of property previously devoted to public service may be grouped provided that the number of properties so grouped is indicated.

---

*Published in the Federal Register on December 16, 1965 (30 F.R. 15465).

**See: Order No. 327 in Docket Nos. 283 and 291, issued September 8, 1966, 36 FPC 591, 31 F.R. 12015, September 14, 1966; Order No. 310-B, herein, issued December 22, 1966, 36 FPC 1144, 31 F.R. 16562, December 28, 1966; and Footnote 1 of the Notice of Proposed Rulemaking issued November 29, 1966, in Docket Nos. R-311 and R-283, 31 F.R. 15325, December 7, 1966.

3. The two schedules (page 203) entitled, respectively, "Special Funds (Accounts 125, 126, 127, 128)" and "Special Deposits (Accounts 132, 133, 134)" are deleted.

4. The schedule (page 204) entitled "Notes and Accounts Receivable" is amended by deleting the parenthetical references "(see Sch. page 205)" and inserting in the heading thereof the following:

> Show separately by footnote the total amount of notes and accounts receivable from directors, officers, and employees included in Notes Receivable (Account 141) and Other Accounts Receivable (Account 143).

5. The two schedules (page 205) entitled, respectively, "Notes Receivable (Account 141)" and "Accounts Receivable (Accounts 142, 143)" are deleted.

6. In schedule (page 506) entitled "Gas Plant Held For Future Use (Account 105), instruction paragraphs 1. and 2. are amended to read as follows:

> 1. Report separately each property held for future use at end of the year having an original cost of $100,000 or more. Other items of property held for future use may be grouped provided that the number of properties so grouped is indicated.
>
> 2. For property having an original cost of $100,000 or more previously used in utility operations, now held for future use, give, in addition to other required information, the date that utility use of such property was discontinued, and the date the original cost was transferred to Account 105.

7. In schedule (page 542) entitled "Franchise Requirements (Account 927) (Gas)", delete the figure "$2500" wherever it appears in instruction paragraph 1. and insert in lieu thereof the figure "$10,000".

8. The last page entitled "Verification" is amended to read as set out in the attachment hereto.*

[Secs. 10, 16, 52 Stat. 826, 830; 15 U.S.C. 717i, 717o]

(B) Annual Report FPC Form No. 2–A, prescribed by § 260.2(a), Subchapter G, Chapter I, Title 18 of the Code of Federal Regulations, is amended by deleting the "Verification" on page 14 thereof and inserting in lieu thereof the "Attestation" set out in the attachment hereto.

(C) The amendments prescribed herein shall be effective for the reporting year 1965 and thereafter.

(D) The Secretary shall cause prompt publication of this order to be made in the Federal Register.

*Omitted in printing.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

MISCELLANEOUS AMENDMENT TO F.P.C. FORM NO. 1; REPORT FORM PRESCRIBED FOR CLASS A AND CLASS B ELECTRIC UTILITIES AND OTHERS SUBJECT TO THE FEDERAL POWER ACT, DOCKET NO. R–284

ORDER NO. 311

AMENDING ANNUAL REPORT FORM NO. 1

(Issued December 8, 1965)*

On September 21, 1965, the Commission issued a notice of proposed rulemaking in this proceeding (30 F.R. 12360, September 28, 1965), wherein it

*Published in the Federal Register on December 16, 1965 (30 F.R. 15465).

proposed to amend several of the schedules in FPC Form No. 1, the annual report required by § 141.1 of the Regulations under the Federal Power Act to be made by public utilities, licensees and others subject to the reporting requirements of the Federal Power Act.

The changes proposed in the notice were, for the most part, in response to suggestions made by representatives of the electric power industry and were designed to minimize existing reporting requirements. Among the changes proposed, however, were others, more fully described in the notice, which were designed to supply additional information to assist the Commission in the proper performance of its responsibilities under the Act.

Many of the comments filed offer criticisms of the items in the latter class of proposals and we shall consider those in the future course of this proceeding.** In the meantime there is no reason to delay incorporation of the other changes in the form for the reporting year 1965.

The amendments prescribed herein to the schedules on pages 432, 432b, 436–437 and 442 of Form No. 1 were not included in the notice of proposed rulemaking. However, they are of a clarifying nature and will not impose any substantial added burden to the reporting requirements.

The Commission finds:

(1) The amendments to the annual report form here prescribed are necessary and appropriate for the administration of the Federal Power Act.

(2) Since the amendments prescribed herein which were not included in the notice in this proceeding are of a clarifying nature further notice thereof is unnecessary.

The Commission, acting pursuant to the provisions of the Federal Power Act, as amended, particularly sections 4(a), (b), (c), 301(a), 302, 304, 309, and 311 thereof (49 Stat. 839, 854, 855, 858, 859; 16 U.S.C. 797(a), (b), (c), 825(a), 825a(a), 825c, 825h, 825j), *orders:*

(A) Annual Report FPC Form No. 1, prescribed by § 141.1(a), Subchapter D, Chapter I, Title 18 of the Code of Federal Regulations, is amended as follows:

1. In schedule (page 201) entitled "Nonutility Property (Account 121)", instruction paragraph 4. is amended to read as follows:

> List separately any property previously devoted to public service having an original cost of $150,000 or more and give date of transfer to Account 121, Nonutility Property. Other items of property previously devoted to public service may be grouped provided that the number of properties so grouped is indicated.

2. The two schedules (page 203) entitled, respectively, "Special Funds (Accounts 125, 126, 127, 128)" and "Special Deposits (Accounts 132, 133, 134)" are deleted.

3. The schedule (page 204) entitled "Notes and Accounts Receivable" is amended by deleting the parenthetical references "(see sch. page 205)" and inserting in the heading thereof the following:

> Show separately by footnote the total amount of notes and accounts receivable from directors, officers, and employees included in Notes Receivable (Account 141) and Other Accounts Receivable (Account 143).

**See: Order No. 311–B, herein, issued October 13, 1966, 36 FPC 749; 31 F.R. 13593, October 21, 1966.

4. The two schedules (page 205) entitled, respectively, "Notes Receivable (Account 141)" and "Accounts Receivable (Accounts 142, 143)" are deleted.

5. In schedule (page 405) entitled "Electric Plant Held For Future Use (Account 105), instruction paragraphs 1. and 2. are amended to read as follows:

1. Report separately each property held for future use at end of the year having an original cost of $100,000 or more. Other items of property held for future use may be grouped provided that the number of properties so grouped is indicated.

2. For property having an original cost of $100,000 or more previously used in utility operations, now held for future use, give, in addition to other required information, the date that utility use of such property was discontinued, and the date the original cost was transferred to Account 105.

6. In schedule (page 426) entitled "Franchise Requirements (Account 927) (Electric)", delete the figure "$2500" wherever it appears in instruction paragraph 1. and insert in lieu thereof the figure "$10,000".

7. In schedule (page 432) entitled "Steam-Electric Generating Plant Statistics (Large Plants)", change designation of instruction paragraph 7. to 8. and insert a new instruction as follows:

7. If more than one fuel is burned in a plant furnish only the composite heat rate for all fuels burned.

8. In the portion of the same schedule appearing on page 432b, insert a new instruction paragraph 3. as follows:

3. All heat rates on this page and also on pages 432 and 432a should be computed on the basis of total fuel burned including burner lighting and banking fuel.

9. In schedule (pages 436–437) entitled "Steam-Electric Generating Plants" insert the following footnote to columns (e), (f), (g), (i), (k) and (n):

* * * Include both ratings for the boiler and the turbine-generator of dual-rated installations.

10. In schedule (page 442) entitled "Transmission Line Statistics" insert the following footnote to the column heading above columns (f) and (g):

* * * In the case of underground lines, report circuit miles.

11. The last page entitled "Verification" is amended to read as set out in the attachment hereto.*

[Secs. 4(a), (b), (c), 301(a), 302, 304, 309, 311, 49 Stat. 839, 854, 855, 858, 859; 16 U.S.C. 797(a), (b), (c), 825(a), 825a(a), 825c, 825h, 825j]

(B) The amendments prescribed herein shall be effective for the reporting year 1965 and thereafter.

(C) The Secretary shall cause prompt publication of this order to be made in the Federal Register.

Before Commissioners: Joseph C. Swidler, Chairman; Charles R. Ross, David S. Black and Carl E. Bagge.

ATLANTIC SEABOARD CORPORATION, DOCKET NO. CP66-64

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued December 10, 1965)

On August 25, 1965, Atlantic Seaboard Corporation (Applicant), filed in Docket No. CP66-64 an application pursuant to Section 7(c) of the Natural

*Omitted in printing.

Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of a tap and sales metering station in order to provide an additional delivery point to Washington Gas Light Company (Washington), an existing resale customer, all as more fully set forth in the application.

The tap and metering station will be constructed on Applicant's 20-inch transmission pipeline near Chantilly, Fairfax County, Virginia. The proposed delivery point will be utilized by Washington to serve the following requirements of a new residential development now under construction:

	1966	1967	1968
Annual (Mcf)	24,000	48,000	73,200
Peak day (Mcf)	240	470	700

Applicant will sell this gas under the terms of its present agreement with Washington, and there will be no increase in the contract demand.

The estimated cost of construction of the proposed facilities is $5,750, which will be financed by Applicant from cash on hand.

Due notice of the filing of the application was published in the Federal Register on September 1, 1965 (30 F.R. 11654). No protest, petition to intervene, or notice of intervention has been filed in this proceeding.

At a hearing held on December 9, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Atlantic Seaboard Corporation, a Delaware corporation having its principal place of business in Charleston, West Virginia, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of March 16, 1943, in Docket No. G-284 (3 FPC 941).

(2) The facilities hereinbefore described and as more fully described in the application in this proceeding are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of said Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to Applicant, Atlantic Seaboard Corporation, authorizing the construction and operation of the facilities as hereinbefore described and as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities authorized shall be completed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within six months from the date of this order.

Before Commissioners: Joseph C. Swidler, Chairman; Charles R. Ross, David S. Black and Carl E. Bagge.

CITIZENS UTILITIES COMPANY, DOCKET NO. E-7253

ORDER AUTHORIZING ISSUANCE OF PROMISSORY NOTES

(Issued December 10, 1965)

Citizens Utilities Company (Applicant), a Delaware corporation, qualified to transact business in the States of Arizona, Colorado, Connecticut, Idaho and Vermont with its principal business office at Stamford, Connecticut, filed an application with the Federal Power Commission, pursuant to Section 204 of the Federal Power Act to issue Promissory Notes up to but not exceeding at any one time, the aggregate amount of $9,500,000 and to issue shares of Common Stock in order to accomplish a 3-for-2 stock split. This order is confined to Applicant's request with respect to its Promissory Notes. Applicant's request for authority to issue additional shares of Common Stock will be the subject of a separate order.

Applicant proposes to issue Promissory Notes pursuant to an existing credit agreement which is to be renewed with the Chemical Bank New York Trust Company and with The Marine Midland Trust Company of New York under which these banks have made and will make loans to the Applicant from time to time on a revolving basis in an aggregate amount not exceeding $9,500,000 at any one time. According to the application, under the proposed credit agreement, the banks will agree to increase the amount of credit to $11,000,000 and will extend such credit until December 9, 1966. However, Applicant states that it will not issue Notes in excess of $9,500,000 without further application to the Commission. The borrowings are to be evidenced by unsecured Notes of the Applicant maturing not more than 90 days from the date of issuance and in any case, not later than December 9, 1966 with interest on each note at the New York prime interest rate for 90 day Notes as of the date of issuance of each Note.

According to the application, the Notes are to be issued to renew $5,400,000 in outstanding Notes due December 10, 1965 under the existing credit agreement referred to above and to furnish funds for the Applicant's 1966 construction program which has an estimated cost of $4,713,000. The major items in Applicant's 1966 construction program include $435,000 for a 25 mile 115 kv transmission line in Amada-Nogales, Arizona, $72,000 for an 8 mile 69 kv transmission line in Kingman, Arizona, $260,000 for substation improvements in Arizona, $490,000 for distribution facilities, $2.3 million for telephone service facilities and $843,000 for water supply facilities.

Written notice of the application has been given to the Arizona Corporation Commission, the Idaho Public Utilities Commission, the Public Service Board of the State of Vermont and to the Governor of each of those States. Notice was also published in the Federal Register on November 25, 1965 (30 F.R. 14694), stating that any person desiring to be heard or to make any protest with reference to said application should on or before December 9, 1965, file with the Federal Power Commission, Washington, D.C. 20426, petitions or protests in accordance with the requirements of the Commission's Rules of Practice and Procedure (18 CFR 1.8 or 1.10). On November 26, 1965, the Public Service Board of the State of Vermont filed a Notice of Intervention in this proceeding and supplemented this notice by a letter dated December 2, 1965. The Vermont Public Service Board states that it has no objection to that portion of the application which relates to the issuance of $9,500,000 worth of short-term Notes. However, regarding the issuance of Common Stock, the Public Service Board of Vermont states that it will be necessary under the Vermont statutes to hold a hearing before approving issuance of any stock by the Applicant.

The Commission finds:

(1) Applicant, a corporation, owns and operates facilities for the transmission and sale at wholesale of electric energy which is generated in the State of New York and consumed in the State of Vermont, all of which facilities are in addition to and do not include facilities used for the generation of electric energy used in local distribution or only for the transmission of electric energy in interstate commerce or facilities for the transmission of electric energy consumed wholly by the transmitter, and Applicant is, therefore, a public utility within the meaning of Section 203 of the Federal Power Act.

(2) The proposed issuance of Promissory Notes in the aggregate principal amount of $9,500,000, all as described above, will constitute an issuance of securities within the purview of Section 204 of the Act.

(3) The proposed issuance of Promissory Notes in the aggregate principal amount of $9,500,000, all as described above, will be in excess of 5% of the par value of the other securities of Applicant, and, therefore, will not be exempt by virtue of Section 204(e) from the requirements of Section 204(a) of the Act.

(4) Applicant is not organized and operating in a State, under the laws of which the issue here involved is regulated by a State Commission within the meaning of Section 204(f) of the Act, and the proposed issuance is, therefore, not exempt by virtue of that Section from the requirements of Section 204 of the Act.

(5) The proposed issuance of Promissory Notes will be exempt from the competitive bidding requirements of Section 34.1a of the Commission's Regulations under the Federal Power Act by reason of paragraph 34.1a(a)(2).

(6) The proposed issuance of securities, as hereinafter authorized, will be for a lawful object within the corporate purposes of Applicant and compatible with the public interest, which is appropriate for and consistent with the proper performance of service by Applicant as a public utility, and which will not impair its ability to perform that service, and is reasonably necessary and appropriate for such purposes.

The Commission orders:

(A) The proposed issuance of Promissory Notes in the aggregate principal amount of $9,500,000, outstanding at any one time, upon the terms and condi-

tions and confined to the purposes set forth in the application, all as described above, is hereby authorized, subject to the provisions of this order.

(B) This authorization is expressly conditioned upon the final maturity of said Notes being not later than December 9, 1966.

(C) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuation, estimates or determination of cost or any other matters whatsoever now pending or which may come before this Commission.

(D) Nothing in this order shall be construed to imply any guarantee or obligation on the part of the United States in respect to any security to which this order relates.

Before Commissioners: Joseph C. Swidler, Chairman; Charles R. Ross, David S. Black and Carl E. Bagge.

EL PASO NATURAL GAS COMPANY, DOCKET NO. G–8932

ORDER AMENDING ORDER AUTHORIZING IMPORTATION OF NATURAL GAS

(Issued December 10, 1965)

On September 27, 1965, El Paso Natural Gas Company (Petitioner) filed in Docket No. G–8932 a petition, as supplemented on October 12, 1965, and November 12, 1965, pursuant to Section 3 of the Natural Gas Act to amend the order accompanying Opinion No. 289 (14 FPC 157) by authorizing the importation of additional quantities of natural gas for a limited period of time, all as more fully set forth in the petition as supplemented.

Petitioner seeks authorization to import at its existing Sumas, Washington, import point on the international boundary between the United States and Canada up to 50,000 Mcf at 14.9 psia of natural gas per day in addition to the presently authorized daily quantity of 300,000 Mcf. The additional quantity will be purchased from Westcoast Transmission Company and transported at the international boundary and in the United States through existing facilities. The additional quantity will be purchased on an interruptible basis through April 30, 1966, and will be used to alleviate curtailments during the 1965–66 heating season.

Inasmuch as Petitioner has experienced the necessity of curtailing interruptible sales during the past heating season and anticipates even greater curtailments during the 1965–66 heating season, it appears to be consistent with the public interest to permit the importation of the additional quantity of gas. Since the additional gas is for interruptible service, a situation could arise in which higher costs would be assigned to firm service due to the effect of the purchase of the additional quantity on purchased gas costs and peak day deliveries; and, therefore, the authorization hereinafter granted will be appropriately conditioned to require the adjustment of costs and sales used by Petitioner in any future rate proceeding.

After due notice no petition to intervene or protest to the granting of the petition has been received. A joint notice of intervention in support of the petition was filed on November 29, 1965, by the Idaho Public Utilities Commission, the Oregon Public Utilities Commissioner and the Washington Utilities and Transportation Commission. No other notices of intervention have been received.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and consistent with the public interest to authorize Petitioner to import an additional quantity of natural gas on a limited basis.

The Commission orders:

(A) The order accompanying Opinion No. 289 is amended by authorizing Petitioner to import an additional quantity of natural gas on a limited basis as hereinbefore described and as more fully described in the petition herein, and in all other respects said order shall remain in full force and effect.

(B) In any future rate proceeding Petitioner shall adjust the costs and sales offered in evidence in said proceeding by eliminating therefrom the purchased gas costs it may incur due to the additional purchases authorized herein and by eliminating therefrom the additional peak day and annual sales it may make as a result of the additional service it can render with the additional quantity of natural gas to be imported.

(C) The authorization issued herein is granted on the express condition that the interruptible service authorized herein shall be curtailed or interrupted to the extent required to meet existing or future contracted maximum delivery obligations of Applicant for firm service to its customers.

Before Commissioners: Joseph C. Swidler, Chairman; Charles R. Ross, David S. Black and Carl E. Bagge.

LONE STAR GAS COMPANY, DOCKET NO. CP66-124

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued December 10, 1965)

On October 22, 1965, Lone Star Gas Company (Applicant) filed in Docket No. CP66-124 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction during the calendar year 1966 and the operation of miscellaneous field facilities to enable Applicant to take into its certificated main pipeline system natural gas which will be purchased from producers thereof, all as more fully set forth in the application.

The purpose of this "budget-type" application is to enable Applicant to act with reasonable dispatch in contracting for and connecting to its pipeline system supplies of natural gas in various producing areas generally coextensive with said system.

The total aggregate cost of such construction, to be financed out of funds currently on hand, will not exceed $1,890,000 and the cost of any single project is to be limited to $472,500.

Due notice of the filing of the application was published in the Federal Register on November 9, 1965 (30 F.R. 14123). No petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on December 9, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Lone Star Gas Company, a Texas corporation having its principal place of business in Dallas, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order issued April 11, 1944, in Docket No. G–442 (4 FPC 565).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit within 60 days after the expiration of the authorization granted hereinafter a statement in compliance with Section 157.7(b) of the Commission's Regulations under the Natural Gas Act.

(6) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(7) The authorization hereinafter granted should be limited to construction during the calendar year 1966 and the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $1,890,000, with no single project to exceed a cost of $472,500.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity is issued authorizing Applicant, Lone Star Gas Company, to construct during the calendar year 1966 and operate the proposed facilities hereinbefore described, as more fully described in the application in this proceeding, only to take natural gas supplies from producers who have received authorization from the Commission to sell natural gas to said Applicant.

(B) Applicant shall submit within 60 days after the expiration of the authorization granted by paragraph (A) above a statement in compliance with Section 157.7(b) of the Commission's Regulations under the Natural Gas Act.

(C) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(D) The authorization granted in paragraph (A) above is limited to construction during the calendar year 1966, and the total expenditures for facilities to be constructed thereunder are limited to a maximum of $1,890,000, with no single project to exceed a cost of $472,500.

Before Commissioners: Joseph C. Swidler, Chairman; Charles R. Ross, David S. Black and Carl E. Bagge.

TRANSCONTINENTAL GAS PIPE LINE CORPORATION, DOCKET NO. CP66-122

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued December 10, 1965)

On October 22, 1965, Transcontinental Gas Pipe Line Corporation (Applicant), filed in Docket No. CP66-122 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the sale and delivery of an additional 100 Mcf of natural gas per day to United Cities Gas Company, South Carolina Division (United Cities) at Gaffney, South Carolina, all as more fully set forth in the application.

This authorization will increase United Cities' entitlement under Applicant's Rate Schedule OG-2 to 4,000 Mcf per day from the 3,900 Mcf per day previously authorized by Commission letter dated June 25, 1965, in Docket No. CP65-181.

United Cities has requested the additional service from Applicant, stating that unexpected changes in its market requirements resulted in the need for the additional gas. Deliveries are to commence with the 1965-1966 winter heating season.

No new facilities will be required as a result of the proposed additional service.

Due notice of the filing of the application was published in the Federal Register on November 5, 1965 (30 F.R. 14023). No protest, petition to intervene or notice of intervention has been filed in this proceeding.

At a hearing held on December 9, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Transcontinental Gas Pipe Line Corporation, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of April 28, 1950, in Docket No. G-1277 (9 FPC 32).

(2) The proposed sale of increased volumes of natural gas hereinbefore described, as more fully described in the application in this proceeding, is to be a sale for resale in interstate commerce subject to the jurisdiction of the Commission and is subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The sale of increased volumes of natural gas, as proposed in the application, is required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's

compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3) and (e) of Section 157.20 of said Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to Applicant, Transcontinental Gas Pipe Line Corporation, authorizing the sale of increased volumes of natural gas, as hereinbefore described and as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3) and (e)of Section 157.20 of such Regulations.

(C) The sale of increased volumes of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within six months from the date of this order.

Before Commissioners: Joseph C. Swidler, Chairman; Charles R. Ross, David S. Black and Carl E. Bagge.

CITIES SERVICE GAS COMPANY, DOCKET NO. CP66–115

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued December 13, 1965)

On October 20, 1965, Cities Service Gas Company (Applicant) filed in Docket No. CP66–115 an application pursuant to Section 7(c) of the Natural Gas Act, as implemented by Section 157.7(b) of the Commission's Regulations under the Act, for a certificate of public convenience and necessity authorizing the construction during the calendar year 1966 and the operation of routine natural gas facilities to enable Applicant to take into its certificated main pipeline system natural gas which will be purchased from producers thereof, all as more fully set forth in the application in this proceeding.

The purpose of this "budget-type" application is to augment Applicant's ability to act with reasonable dispatch in contracting for and connecting to its pipeline system new supplies of natural gas in various producing areas generally coextensive with said system.

The total cost of the facilities covered by this application will not exceed a maximum of $3,000,000, with no single project to exceed a cost of $500,000, which cost is proposed to be financed from treasury cash.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on December 9, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Cities Service Gas Company, a Delaware corporation having its principal place of business in Oklahoma City, Oklahoma, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of December 28, 1943, in Docket No. G–298 (4 FPC 471).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit within 60 days after the expiration of the authorization granted hereinafter, a statement in compliance with Section 157.7(b)(3) of the Commission's Regulations under the Natural Gas Act.

(6) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(7) The authorization hereinafter granted should be limited to construction during the calendar year 1966 and the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $3,000,000, with no single project to exceed a cost of $500,000.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity is issued authorizing Applicant, Cities Service Gas Company, to construct during the calendar year 1966 the proposed facilities hereinbefore described, as more fully described in the application in this proceeding, and to operate such facilities only to take natural gas supplies from producers who have received authorization from the Commission to sell natural gas to said Applicant.

(B) Applicant shall submit within 60 days after the expiration of the authorization granted by paragraph (A) above a statement in compliance with Section 157.7(b)(3) of the Commission's Regulations under the Natural Gas Act.

(C) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraph (a) and (e) of Section 157.20 of said Regulations.

(D) The authorization granted in paragraph (A) above is limited to construction during the calendar year 1966, and the total expenditures for facilities to be constructed thereunder are limited to a maximum of $3,000,000, with no single project to exceed a cost of $500,000.

Before Commissioners: Joseph C. Swidler, Chairman; Charles R. Ross, David S. Black and Carl E. Bagge.

EL PASO NATURAL GAS COMPANY, DOCKET NOS. CP66-92 AND CP66-93

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued December 13, 1965)

On October 4, 1965, El Paso Natural Gas Company (Applicant) filed, with respect to its Southern Division, in Docket No. CP66-92 and, with respect to its Northwest Division, in Docket No. CP66-93 applications pursuant to Section 7(c) of the Natural Gas Act, as implemented by Section 157.7(c) of the Regulations under the Act, for certificates of public convenience and necessity authorizing the construction, during the calendar year 1966, and the operation of natural gas facilities for the sale and delivery of natural gas to existing authorized distributors for resale, and, also, in Docket No. CP66-93, the sale and delivery of natural gas to such distributors by means of facilities to be constructed, during the calendar year 1966, and operated by Pacific Gas Transmission Company (Pacific Gas) [1], all as more fully set forth in the applications in these proceedings.

Applicant states that it has filed the subject separate applications for its Northwest Division and its Southern Division in consideration of the forthcoming divestiture of Applicant's Northwest Division facilities to Northwest Pipeline Corporation, as ordered by the United States Supreme Court.[2]

In Docket No. CP66-92 for service to its Southern Division distributor customers, Applicant proposes to construct a maximum of thirty taps, twenty-five measuring and regulating stations, and three lateral or loop pipelines not to exceed a maximum diameter of 8⅝-inches and a maximum length of twelve miles, all together with standard appurtenances necessary for the respective operation of said facilities. The total estimated cost of the proposed maximum facilities in Docket No. CP66-92 is $300,000, which cost will be financed from current working funds.

In Docket No. CP66-93 for service to its Northwest Division distributor customers, Applicant proposes to construct a maximum of twenty taps, twenty measuring and regulating stations, and three lateral or loop pipelines not to exceed a maximum diameter of 8⅝-inches and a maximum length of twelve miles, all together with standard appurtenances necessary for the respective operation of said facilities. The total estimated cost of the proposed maximum facilities in Docket No. CP66-93 is $300,000, which cost will be financed from current working funds.

---

[1] By order issued August 5, 1960, in Docket No. G-17350, *et al.* (24 FPC 134), Pacific Gas was authorized to transport for the account of Applicant natural gas purchased by the latter from Westcoast Transmission Company Limited at a point on the international boundary near Kingsgate, British Columbia. Deliveries of gas so transported are made by Pacific Gas at delivery points specified by Applicant along Pacific Gas' system in the States of Idaho, Washington and Oregon. By order issued April 6, 1962, as amended, in Docket No. CP62-59 (27 FPC 671), Pacific Gas was authorized to construct and operate taps and metering facilities at points of delivery specified by Applicant and where Applicant has been authorized to sell gas.

[2] See Notice of Applications, Consolidation of Proceedings and Requirement to File Testimony, issued August 18, 1965, regarding the application of Applicant in Docket No. CP66-27 and the applications of Northwest in Docket Nos. CP66-28, CP66-29 and CP66-30.

In each of the subject applications, Applicant states that natural gas deliveries to any one customer will not exceed 100,000 Mcf annually, and that such gas will not be sold or resold for boiler fuel purposes.

The total estimated cost of maximum facilities proposed in Docket Nos. CP66–92 and CP66–93 is $600,000 and, therefore, exceeds the cost limitation of $300,000 imposed by Section 157.7(c)(3) of the Commission's Regulations. Accordingly, Applicant requests that said cost limitation be waived.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the applications has been filed.

At a hearing held on December 9, 1965, the Commission on its own motion received and made a part of the record in these proceedings all evidence, including the applications and exhibits, submitted in support of the authorizations sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, El Paso Natural Gas Company, a Delaware corporation having its principal place of business in El Paso, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of January 11, 1944, in Docket No. G–288 (4 FPC 486).

(2) The facilities hereinbefore described, as more fully described in the applications in these proceedings, are proposed to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof and the proposed sales and transportation of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the proposed sales and transportation of natural gas by Applicant are required by the public convenience and necessity and certificates therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificates issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(6) The authorizations hereinafter granted should be limited to construction during the calendar year 1966 and the total expenditures for facilities thereunder should be limited to a maximum of $600,000 (a maximum of $300,000 each in Docket Nos. CP66–92 and CP66–93), with the total deliveries to any one customer in each docket not to exceed a maximum of 100,000 Mcf of natural gas per year.

(7) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit in each of the subject dockets within 60 days after the expiration of the authorizations granted hereinafter, a statement in compliance with Section 157.7(c)(8) of the Commission's Regulations under the Natural Gas Act.

(8) Good cause has been shown for waiver of the cost limitations set forth in Section 157.7(c)(3) of the Commission's Regulations under the Natural Gas Act.

The Commission orders:

(A) Upon the terms and conditions of this order, certificates of public convenience and necessity are issued authorizing Applicant, El Paso Natural Gas Company, in Docket Nos. CP66–92 and CP66–93 to construct, during the calendar year 1966, the proposed facilities hereinbefore described, as more fully described in the applications in these proceedings, and to operate such facilities and to sell natural gas by means thereof to distributors for resale and, in Docket No. CP66–93, to sell natural gas to distributors for resale by means of facilities to be constructed and operated by Pacific Gas, as hereinafter provided.

(B) The certificates issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(C) The authorizations granted in paragraph (A) above are limited to construction during the calendar year 1966 and the total expenditures for facilities to be constructed thereunder are limited to a maximum of $600,000 (a maximum of $300,000 each in Docket Nos. CP66–92 and CP66–93), with the total deliveries to any one customer in each docket not to exceed a maximum of 100,000 Mcf of natural gas per year.

(D) Applicant shall submit in each of the subject dockets within 60 days after the expiration of the authorizations granted by paragraph (A) above a statement in compliance with Section 157.7(c)(8) of the Commission's Regulations under the Natural Gas Act.

(E) The cost limitations set forth in Section 157.7(c)(3) of the Commission's Regulations under the Natural Gas Act are waived.

Before Commissioners: Joseph C. Swidler, Chairman; Charles R. Ross, David S. Black and Carl E. Bagge.

KANSAS-NEBRASKA NATURAL GAS COMPANY, INC., DOCKET NO. CP66–134

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued December 13, 1965)

On October 27, 1965, Kansas-Nebraska Natural Gas Company, Inc. (Applicant), filed in Docket No. CP66–134 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction during the calendar year 1966 and the operation of gas purchase facilities to enable Applicant to take into its certificated main pipeline system natural gas which will be purchased from producers thereof, all as more fully set forth in the application.

The purpose of this "budget-type" application is to augment Applicant's ability to act with reasonable dispatch in contracting for and connecting to its pipeline system new supplies of natural gas in various producing areas generally co-extensive with said system.

The total cost of the proposed facilities will not exceed a maximum of $1,600,000, and no single project will exceed a cost of $400,000, which costs will be paid for out of current working capital.

Due notice of the filing of the application was published in the Federal Register on November 17, 1965 (30 F.R. 14392). No protest, petition to intervene or notice of intervention has been filed in this proceeding.

At a hearing held on December 9, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Kansas-Nebraska Natural Gas Company, Inc., a Kansas corporation having its principal place of business in Hastings, Nebraska, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of April 6, 1943, in Docket No. G-259 (3 FPC 966).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit within 60 days after the expiration of the authorization granted hereinafter, a statement in compliance with Section 157.7(b)(3) of the Commission's Regulations under the Natural Gas Act.

(6) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(7) The authorization hereinafter granted should be limited to construction during the calendar year 1966, and the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $1,600,000, with no single project to exceed a cost of $400,000.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity is issued authorizing Applicant, Kansas-Nebraska Natural Gas Company, Inc., to construct during the calendar year 1966 the proposed facilities hereinbefore described, as more fully described in the application in this proceeding, and to operate such facilities only to take natural gas supplies from producers who have received authorization from the Commission to sell natural gas to said Applicant.

(B) Applicant shall submit within 60 days after the expiration of the authorization granted by paragraph (A) above a statement in compliance with Section 157.7(b)(3) of the Commission's Regulations under the Natural Gas Act.

(C) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(D) The authorization granted in paragraph (A) above is limited to construction during the calendar year 1966, and the total expenditures for facilito be constructed thereunder should be limited to a maximum of $1,600,000, no single project to exceed a cost of $400,000.

Before Commissioners: Joseph C. Swidler, Chairman; Charles R. Ross, David S. Black and Carl E. Bagge.

NATURAL GAS PIPELINE COMPANY OF AMERICA, DOCKET NO. CP66–135

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued December 13, 1965)

On October 29, 1965, Natural Gas Pipeline Company of America (Applicant) filed in Docket No. CP66–135 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the sale and delivery of an additional Daily Contract Quantity of 200 Mcf of natural gas to United Cities Gas Company (United Cities), an existing customer of Applicant, all as more fully set forth in the application.

United Cities has requested Applicant to provide the additional gas commencing on or about December 15, 1965, to meet larger than anticipated increases in firm service demands for the 1965–66 winter season. United Cities' presently effective Daily Contract Quantity is 3,000 Mcf under Applicant's Rate Schedule G–1. Applicant's total authorized sales of United Cities will amount to 3,200 Mcf per day, after the issuance of this certificate.

No additional facilities will be required to provide the additional volumes. Deliveries will be made at an existing meter station serving Vandalia, Illinois.

The service will be rendered from Applicant's unallocated capacity.

Due notice of the filing of the application was published in the Federal Register on November 17, 1965 (30 F.R. 14393). No protest, petition to intervene, or notice of intervention has been filed in this proceeding.

At a hearing held on December 9, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Natural Gas Pipeline Company of America, a Delaware corporation having its principal place of business in Chicago, Illinois, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of October 13, 1942, in Docket No. G–235 (3 FPC 830).

(2) The proposed sale of increased volumes hereinbefore described, as more fully described in the application in this proceeding, is to be a sale for resale in interstate commerce subject to the jurisdiction of the Commission and

is subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The sale of increased volumes of natural gas, as proposed in the application, is required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3) and (e) of Section 157.20 of said Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to Applicant, Natural Gas Pipeline Company of America, authorizing the sale of increased volumes of natural gas, as hereinbefore described and as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3) and (e) of Section 157.20 of such Regulations.

(C) The sale of increased volumes of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within six months from the date of this order.

Before Commissioners: Joseph C. Swidler, Chairman; Charles R. Ross, David S. Black and Carl E. Bagge.

NORTHERN NATURAL GAS COMPANY, DOCKET NO. CP66-98

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued December 13, 1965)

On October 11, 1965, Northern Natural Gas Company (Applicant) filed in Docket No. CP66-98 an application pursuant to Section 7(c) of the Natural Gas Act, as implemented by Section 157.7(c) of the Regulations under the Act, for a certificate of public convenience and necessity authorizing the construction during the calendar year 1966 and operation of natural gas facilities for the sale of natural gas to existing distributors for resale in existing market areas and for direct sales through Applicant's Peoples Division, all as more fully set forth in the application in this proceeding.

Applicant proposes to construct a maximum of 60 new delivery points for sales to existing distributing customers and a maximum of 40 new delivery points for direct sales customers. Firm volumes to be delivered will be provided from the existing contract demand of the distributor involved, or

from capacity of the existing pipeline facilities in areas where contract demand rate schedules are not applicable.

The total estimated cost of facilities proposed under this application will not exceed a maximum of $300,000 and the total deliveries to any one consumer will not exceed a maximum of 100,000 Mcf of natural gas per year.

Applicant requests a waiver of the provisions of Section 157.7(c)(1)(i) which prohibits the filing of an abbreviated application when a distributor is required to make a contribution to the Applicant for cost of construction of facilities. Applicant states that it is its policy to require distributors, including its Peoples Division, to make a contribution for the cost of constructing measuring and regulating facilities and appurtenances where no additional contract demand is being purchased by such distributors. Applicant's policy covering contributions is contained in its FPC Gas Tariff on file with the Commission.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on December 9, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Northern Natural Gas Company, a Delaware corporation having its principal place of business in Omaha, Nebraska, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of April 6, 1943, in Docket No. G-280 (3 FPC 967).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation and/or sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(6) The authorization hereinafter granted should be limited to construction during the calendar year 1966 and the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $300,000, with the total deliveries to any one customer not to exceed a maximum of 100,000 Mcf of natural gas per year.

(7) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit within 60 days after the expiration of the authorization granted hereinafter, a statement in compliance

with Section 157.7(c)(8) of the Commission's Regulations under the Natural Gas Act.

(8) The certificate issued hereinafter should be conditioned upon Applicant's compliance with the provisions of Section 157.7(c)(7) of the aforesaid Regulations.

(9) Good cause has been shown for waiver of that portion of Section 157.7(c)(1)(i) of the Commission's Regulations under the Act which prohibits the filing of an abbreviated application where contribution toward the cost of the facilities is to be required of distributors.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity is issued authorizing Applicant, Northern Natural Gas Company, to construct during the calendar year 1966 the proposed facilities hereinbefore described, as more fully described in the application in this proceeding, and to operate such facilities to sell natural gas to distributors for resale and to direct customers as hereinafter provided.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(C) The authorization granted in paragraph (A) above is limited to construction during the calendar year 1966 and the total expenditures for facilities to be constructed thereunder are limited to a maximum of $300,000, with the total deliveries to any one customer limited to a maximum of 100,000 Mcf of natural gas per year.

(D) Applicant shall submit within 60 days after the expiration of the authorization granted by paragraph (A) above a statement in compliance with Section 157.7(c)(8) of the Commission's Regulations under the Natural Gas Act.

(E) The certificate issued by paragraph (A) above is expressely conditioned upon Applicant's compliance with the provisions of Section 157.7(c)(7) of the aforesaid Regulations and, further, the certificate is granted upon the express condition that any interruptible service resulting therefrom shall be curtailed or interrupted to the extent required to meet existing or future contracted maximum delivery obligations of Applicant for firm service to its customers.

(F) This certificate shall not entitle any industrial customers to whom firm deliveries are authorized herein to any priorities or rights to additional gas for metering any future increases in their requirements at the expense of resale customers desiring to acquire additional gas to meet any future increases in their requirements.

(G) Applicant's request for waiver of that portion of Section 157.7(c)(1)(i) of the aforesaid Regulations which prohibits the filing of an application where contribution to the cost of facilities is to be required from distributors is granted.

Before Commissioners: Joseph C. Swidler, Chairman; Charles R. Ross, David S. Black and Carl E. Bagge.

TEXAS GAS TRANSMISSION CORPORATION, DOCKET NO. CP65–423; UNION OIL COMPANY OF CALIFORNIA, DOCKET NO. CI65–1351

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued December 13, 1965)

On June 28, 1965, Texas Gas Transmission Corporation (Texas Gas) filed in Docket No. CP65–423 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of facilities and the transportation of natural gas to be purchased from Union Oil Company of California (Union Oil) in the North Fresh Water Bayou Field, Vermilion Parish, Louisiana, all as more fully set forth in the application.

Texas Gas proposes to construct and operate one meter station and approximately 36.3 miles of twenty-inch pipeline between a point on its Eunice-Thibodaux lines, eight miles north (downstream) of its Lafayette, Louisiana, compressor station, and Union Oil's delivery point in the North Fresh Water Bayou Field. Estimated cost of the proposed facilities is $3,538,000, which will be financed from funds on hand.

On June 21, 1965, Union Oil filed in Docket No. CI65–1351 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the sale for resale and the delivery of natural gas in interstate commerce to Texas Gas at an initial rate of 20.625 cents per Mcf at 15.025 psia, all as more fully set forth in the application. On July 19, 1965, the Public Service Commission of the State of New York filed a notice of intervention in Docket No. CI65–1351, and on September 15, 1965, Union Oil filed a settlement proposal in said docket. In its settlement proposal Union Oil has agreed to accept a certificate conditioned on the reduction of future tax reimbursement from seventy-five percent to fifty percent for the first five years commencing with the date of initial delivery with the proviso that after the end of the five-year period Union Oil will have the right to file prospectively for seventy-five percent tax reimbursement for any new taxes levied during the five-year period as well as for increased taxes levied after said period. On October 8, 1965, the Public Service Commission advised the Commission that it would not oppose the granting of a certificate to Union Oil which includes the terms of the settlement proposal.

The contract between Texas Gas and Union Oil provides for deliveries in excess of the maximum contract quantity if the deliverability is higher than that quantity, a provision that quantities taken in excess of the annual minimum takes will be deleted from subsequent minimum-take obligations, a five-year build-up in daily minimum contract quantities starting at a 1 to 12,500 reserve ratio and gradually building up to a 1 to 8,000 reserve ratio, a five-year make-up period for deficient takes, stringent deliverability requirements in that Union Oil must sustain a delivery of the contract quantity for fourteen consecutive days with failure to do so resulting in a reduction in contract quantity, a buyer's option to include any reserves developed in excess of 1¼ billion Mcf, a delivery pressure of 1,200 psig, and a firm rate of 20.625 cents

per Mcf for the first ten years. 8,907 acres are dedicated to the contract and reserves are estimated at 221 million Mcf. Texas Gas has filed a petition for leave to intervene in support of the application.

The application in Docket No. CI65–1351 is presented to the Commission in the nature of a settlement concurred in by the Applicant, the Commisssion staff and the interveners. While the initial price is in excess of the Commission's recent "in-line" determination, it is below the guideline price set forth in the Statement of General Policy No. 61–1 and combined with other contract provisions more favorable than those usually provided in this area. Therefore, the application will be granted.

After due notice no petitions to intervene, notices of intervention or protests to the granting of the applications have been filed other than those filed by the Public Service Commission of the State of New York and Texas Gas.

At a hearing held on December 9, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the applications and exhibits thereto, submitted in support of the authorizations sought, and upon consideration of the record,

The Commission finds:

(1) Applicant, Texas Gas Transmission Corporation, a Delaware corporation having its principal place of business in Owensboro, Kentucky, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of March 30, 1948, in Docket No. G–855 (7 FPC 213).

(2) Applicant, Union Oil Company of California, is engaged in the sale for resale of natural gas in interstate commerce for ultimate public consumption and is, therefore, a "natural-gas company" as heretofore found by the Commission.

(3) The facilities hereinbefore described, as more fully described in the application in Docket No. CP65–423, will be used for the transportation of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the construction and operation thereof and the transportation of natural gas by Texas Gas are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(4) The sale of natural gas hereinbefore described, as more fully described in the application in Docket No. CI65–1351, will be made in interstate commerce subject to the jurisdiction of the Commission, and such sale by Union Oil, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, is subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(5) Applicants are able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(6) The proposed construction and operation of facilities and the transportation and sale of natural gas by Applicants is required by the public convenience and necessity, and certificates therefor should be issued as hereinafter ordered and conditioned.

(7) Public convenience and necessity require that the certificate issued hereinafter in Docket No. CP65–423 and the rights granted thereunder should be conditioned upon Texas Gas' compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms

and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued authorizing Texas Gas Transmission Corporation to construct and operate facilities and to transport natural gas as hereinbefore described, all as more fully described in the application in Docket No. CP65–423, upon the terms and conditions of this order.

(B) A certificate of public convenience and necessity is issued upon the terms and conditions of this order authorizing the sale by Union Oil Company of California of natural gas in interstate commerce for resale, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, all as hereinbefore described and as more fully described in the application in Docket No. CI65–1351.

(C) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Texas Gas' compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(D) The construction authorized in paragraph (A) above shall be completed and the facilities placed in actual operation as provided by paragraph (b) of Section 157.20 of the Regulations under the Natural Gas Act within six months from the date on which this order issues.

(E) The certificate issued in paragraph (B) above is not transferable and shall be effective only so long as Union Oil continues the acts or operations hereby authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations and orders of the Commission.

(F) The grant of the certificate issued in paragraph (B) above shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act or of Part 154 or Part 157 of the Commission's Regulations thereunder and is without prejudice to any findings or orders which have been or which may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against Union Oil. Further, our action in this proceeding shall not foreclose nor prejudice any future proceedings or objections relating to the operation of any price or related provisions in the gas purchase contract herein involved. Nor shall the grant of the certificate aforesaid for service to the particular customer involved imply approval of all of the terms of the contract, particularly as to the cessation of service upon termination of said contract, as provided by Section 7(b) of the Natural Gas Act. Nor shall the grant of the certificate aforesaid be construed to preclude the imposition of any sanctions pursuant to the provisions of the Natural Gas Act for the unauthorized commencement of any sale of natural gas subject to said certificate.

(G) The certificate issued in Docket No. CI65–1351 is conditioned upon the submittal by Union Oil of a contract amendment as a supplement to its future rate schedule filing which amendment shall provide for a reduction in future tax reimbursement from seventy-five percent to fifty percent for the five-year period commencing with the date of initial delivery.

Before Commissioners: Joseph C. Swidler, Chairman; Charles R. Ross, David S. Black and Carl E. Bagge.

J. S. RUSHING, DOCKET NO. G-6085

ORDER AMENDING ORDER ISSUING CERTIFICATE AND ACCEPTING SUPPLEMENT TO FPC GAS RATE SCHEDULE FOR FILING

(Issued December 14, 1965)

On August 13, 1965, J. S. Rushing (Petitioner) filed in Docket No. G-6085 a petition to amend the order issuing a certificate of public convenience and necessity in said docket by deleting therefrom authorization to sell natural gas to Arkansas Louisiana Gas Company from all formations below 8,000 feet from the surface in the Ada Field, Webster and Bienville Parishes, Louisiana, all as more fully set forth in the petition.

Petitioner and the purchaser have amended their contract, J. S. Rushing FPC Rate Schedule No. 1, by extending the term thereof only with respect to sales from production from formations above 8,000 feet below the surface. The only gas presently being produced is from depths of less than 8,000 feet and Petitioner states that gas cannot be produced economically from deeper formations if the price received for such gas is limited to that in the present contract.

In view of the limited nature of Petitioner's existing operations and the fact that he cannot develop economically the acreage below a depth of 8,000 feet, the order issuing a certificate to Petitioner will be amended by deleting therefrom authorization to sell natural gas from such formations. However, the action taken in this case should not be construed as establishing a general Commission policy.

After due notice no petition to intervene, notice of intervention or protest to the granting of the petition has been received.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the order issuing a certificate of public convenience and necessity in Docket No. G-6085 should be amended as hereinafter ordered and that the related rate schedule supplement should be accepted for filing.

The Commission orders:

(A) The order issuing a certificate of public convenience and necessity in Docket No. G-6085 to J. S. Rushing is amended by deleting therefrom authorization to sell natural gas from formations below the depth of 8,000 feet from the surface, and in all other respects said order shall remain in full force and effect.

(B) The amendment dated February 16, 1965, insofar as it deletes production from formations below the depth of 8,000 feet, is accepted for filing,[1] effective on the date of this order and is designated as Supplement No. 6 to J. S. Rushing FPC Gas Rate Schedule No. 1.

[1] The amendment has heretofore been accepted for filing insofar as it provides for a rate increase and extends the term of the contract for production from formations above the depth of 8,000 feet.

Before Commissioners: Joseph C. Swidler, Chairman; Charles R. Ross, David S. Black and Carl E. Bagge.

TRANSWESTERN PIPELINE COMPANY, DOCKET NO. CP66-143

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued December 14, 1965)

On November 5, 1965, Transwestern Pipeline Company (Applicant) filed in Docket No. CP66-143 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of a 1,000 horsepower compressor unit and the sale and delivery of up to 37,500 Mcf of natural gas per day to Panhandle Eastern Pipe Line Company (Panhandle), as more fully set forth in the application.

The gas is to be delivered at an existing interconnection of Applicant's Cactus Lateral and Panhandle Sunray Pipeline in Sherman County, Texas, where Applicant is now delivering up to 25,000 Mcf per day to Panhandle, pursuant to the Commission's certificate order issued on June 29, 1965, in Docket Nos. CP65-362 (Applicant) and CP65-370 (Panhandle) 33 FPC 1304. The authorization issued in those dockets will expire on December 31, 1965, or when Applicant commences deliveries of exchange gas to Natural Gas Pipeline Company of America on the Cactus Lateral as authorized in Docket Nos. CP65-320 and CP65-325, whichever is earlier.

The sale of up to 37,500 Mcf per day, as proposed by the instant filing, will commence upon the termination of the present sale, and it will remain in effect until December 31, 1966, or until authorization is received in Docket No. CP65-236 or Docket No. CP65-237, which are competitive proposals for Permian Basin supply lines, or until authorization is obtained for the sale of gas to Pacific Lighting Gas Supply Company in Docket Nos. CP63-204 and CP64-91. Applicant is given the election, upon 90 days' notice to Panhandle, either to terminate the proposed sale or to reduce the volumes to be delivered under the proposed sale, if any of the said authorizations are granted prior to December 31, 1966, as provided in the Gas Sales Agreement dated October 25, 1965, executed by Applicant and Panhandle.

Applicant will construct the compressor unit and related facilities at its compressor station site P-3 near Pampa, Texas. The estimated cost of the facilities to be constructed is $223,000, which will be financed out of current working funds. The proposal is economically feasible.

Due notice of the filing of the application was published in the Federal Register on November 20, 1965 (30 F.R. 14538). No petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on December 9, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Transwestern Pipeline Company, a Delaware corporation with its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found

by the Commission in its order of August 10, 1959, issued in Docket No. G–14871, *et al.* (22 FPC 391).

(2) The facilities hereinbefore described and as more fully described in the application in this proceeding are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof and the transportation and sale of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the transportation and sale of natural gas by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of said Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to Transwestern Pipeline Company authorizing the construction and operation of the facilities and the transportation and sale of natural gas as hereinbefore described and as more fully set forth in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities authorized shall be completed and placed in actual operation and the transportation and sale of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within one year from the date of this order.

OPINION NO. 482

UNITED STATES DEPARTMENT OF THE INTERIOR, BONNEVILLE POWER ADMINISTRATION, DOCKET NOS. E–6611, E–6905 AND E–7242

OPINION AND ORDER CONFIRMING AND APPROVING RATE SCHEDULES

(Issued December 14, 1965)*

Syllabus

1. Standards to be applied by Commission in passing on Bonneville's rate schedules are found in Bonneville Project Act and Flood Control Act of

*Reconsideration and Stay denied by order issued February 11, 1966, 35 FPC 227.

1944—these acts provide a dual standard of providing consumers with power benefits at lowest possible price consistent with good business practices as well as protecting interests of United States in amortizing its investment within reasonable period. P. 1465.

2. Commission jurisdiction can neither be analogized to an independent rate investigation nor to appellate function of United States Courts of Appeals over Commission decisions under Federal Power Act—it evolves from unique relationship between Department of the Interior and the Commission. P. 1465.
3. Commission's role is to review proposal of Secretary of Interior and confirm or approve, if on basis of independent judgment, it comports with dual statutory standard. P. 1465.
4. It has long been established that 50 years is a reasonable period within which to repay government's investment—there is no reason to depart from that period here. P. 1466.
5. It was entirely proper for Bonneville to use 40 years as representing the average service life of the transmission facilities. P. 1466.
6. In view of risks, Bonneville's management should be allowed reasonable margin of safety in meeting obligations; based on repayment study, risks that might add to obligations and possible increases in cost, relatively modest increase in rate level was not only reasonable but obligatory. P. 1468.
7. Commission concludes that rates presently established must under projected assumptions, be sufficient to insure that necessary contributions to amortization of Federal investment is made on schedule throughout the 50 years following date of investment in last project on system. P. 1468.
8. Secretary of the Interior exercised reasonable judgment in making provision for repaying replacement costs by adopting annuity method and amount established for such costs is reasonable. P. 1468.
9. Commission finds nothing militating against proposed increase with respect to impact of rate increase on the purchasers of power. P. 1469.
10. Bonneville, having consulted its customers at length, arrived at a reasonable rate structure to meet problems of itself and customers and designed to encourage widest possible use of electric power. P. 1470.
11. In a proceeding arising under Sections 5 and 6 of Bonneville Project Act and Section 5 of the Flood Control Act of 1944, Commission *confirms* and *approves* proposed rate schedules of Bonneville Power Administration.

Charles F. Luce, Administrator, for the Bonneville Power Administration.
Ralph H. Wickberg for the Idaho Public Utilities Commission.
Gus Norwood for Northwest Public Power Association.
Ken Billington for Washington Public Utility Districts Association.
James R. Cunningham for the Washington Utilities and Transportation Commission.
Dale T. Crabtree for the Oregon Public Utility Commissioner.
Robert Marritz for the National Rural Electric Cooperative Association.
Allan Hart and *William A. Dittmer* for Industrial Customers.
Leonard D. Eesley for the Staff of the Federal Power Commission.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

O'CONNOR, *Commissioner:*

This is a proceeding arising under Sections 5 and 6 of the Bonneville Project Act[1] and Section 5 of the Flood Control Act of 1944[2] with respect to rate schedules proposed by the Bonneville Power Administration to become effective December 20, 1965 and submitted for our confirmation and approval by the Secretary of the Interior on September 3, 1965. Bonneville acts as a marketing and transmission agency for a number of Federal electric generating projects in the Pacific Northwest. This particular proceeding pertains to rates for projects of the Corps of Engineers, and related transmission facilities, which are established under the Bonneville Act and the Flood Control Act. Additionally, while rates for power from projects of the Bureau of Reclamation are not subject to our approval, the proposed rates are also applicable to them, since the Reclamation projects are part of the same system as Bonneville, and financial data presented by Bonneville include them too.

A general review of Bonneville's rate schedules has been made by the Commission every five years. The Commission last approved Bonneville's wholesale rate schedules on December 16, 1959, for the five-year period commencing December 20, 1959 (22 FPC 1046); however, in 1964 with the concurrence of its customers the Secretary asked for a one-year extension of the approval of the existing rates. The request was based upon the statement of the Secretary that extensive studies envisaged a rate increase and further time was necessary to hold conferences with the customers of Bonneville that would be affected before the final rate proposals were submitted to the Commission. Accordingly we extended the approval of the existing schedules (with one amendment) until December 20, 1965 (32 FPC 1478).

The proposed new rate schedules, and the general rate schedule provisions applicable thereto, would increase Bonneville's revenues during the next nine years by about three percent, or an average annual amount of $4,000,000. The rates are included in six rate schedules, designated E–5, F–5, C–5, P–2, S–1, and H–4. The Secretary requests approval of the new rate schedules to supersede the existing rate schedules in their entirety. The proposed schedules would be applicable to Bonneville's sales of power and energy from projects of the Bureau of Reclamation and Corps of Engineers, either existing, under construction, or authorized, together with the currently unauthorized Grand Coulee Third Power Plant.[3]

A number of protests against the proposed increases were filed by electric cooperatives, cities, public utility districts, groups of industrial customers, individuals, associations, the Public Utility Commissioner of Oregon, the Oregon Department of Commerce, the Washington Utilities and Transportation Com-

[1] 50 Stat. 734, 16 U.S.C. 832d and 832e.

[2] 58 Stat. 890, 16 U.S.C. 825s.

[3] The study assumes that the first units of the unauthorized Grand Coulee Third Power Plant will commence operation in 1973. We agree that inclusion of this project, which will help the overall repayment situation, is justified here because of the likelihood of its authorization. In fact, this development is contemplated by the treaty signed January 17, 1961, between the United States and Canada relating to the Cooperative development of the Columbia River Basin.

Bonneville's completed projects include Bonneville, Grand Coulee, Hungry Horse, Detroit, McNary, Big Cliff, Lookout Point, Albeni Falls, Dexter, Chief Joseph, Chandler, The Dalles, Roza, Ice Harbor, Hills Creek, Cougar, Minidoka, Boise Diversion, Black Canyon, Anderson Ranch, and Palisades; projects under construction include Green Peter, Foster, John Day, Lower Monumental, Little Goose, and Dworshak; and projects now authorized include Libby, Lower Granite, Asotin, Lost Creek, Fremont, and Grand Coulee-Pump Turbines.

mission, and the Idaho Public Utilities Commission. In order to assist us in carrying out our statutory responsibilities we provided by order of October 29, 1965, [unreported] for an oral hearing before the whole Commission on the proposed rate schedules. At the hearing presentations were made by the Administrator of Bonneville, representatives of the Idaho Public Utilities Commission, the Northwest Public Power Association, the Washington Public Utility Districts Association, the Washington Utilities and Transportation Commission, the Oregon Public Utility Commissioner, the National Rural Electric Cooperative Association and a group of industrial customers.

The standards to be applied by us are found in the Bonneville Project Act and the Flood Control Act of 1944. These acts provide a dual standard as noted by several of the parties including the Secretary. Under the Bonneville Act (Section 6) it is provided that "such rate schedules * * * shall be fixed * * * with a view of encouraging the widest possible diversified use of electric energy"; whereas under Section 7 "Rate schedules shall be drawn having regard to the recovery * * * of the cost of producing and transmitting such electric energy, including the amortization of the capital investment over a reasonable period of years." Section 5 of the Flood Control Act directs that the Secretary of the Interior dispose of the energy "to encourage the most widespread use thereof at the lowest possible rates to consumers consistent with sound business principles, the rate schedules to become effective upon confirmation and approval by the Federal Power Commission." This section also has a provision similar to the Bonneville Act with respect to amortization.

In applying this dual standard a question arises as to the scope of the Commission's consideration of the proposed rates. The Secretary of the Interior argues that the Commission's jurisdiction is limited to ascertaining whether he has properly exercised his discretionary authority within the framework of the Bonneville Act and the Flood Control Act. On the other hand some of the protestants argue that we should proceed as though examining the rates proposed by a private utility under the Federal Power Act. Our jurisdiction, however, can neither be analogized to an independent rate investigation nor to the appellate function of United States Courts of Appeals over Commission decisions under the Federal Power Act. It evolves from a unique relationship between the Department of the Interior, a part of the Executive Branch, with managerial and ratemaking expertise over its projects, and, the Federal Power Commission, an independent agency of the Congress with special expertise in ratemaking. In establishing this relationship Congress did not limit us to the function of assuring that the Secretary had complied with the bare legal requirements of the statute. It expected us to apply our independent expertise in evaluating the rates set by the Secretary. On the other hand, investing the Commission with the responsibility of reviewing Bonneville's rates, Congress obviously did not mean that we were to supplant the Secretary's responsibility for initiating appropriate rates, nor were we to make a *de novo* determination. The statutory standard leaves to the Secretary a measure of discretion. It follows, therefore, that we need not necessarily reach the same conclusion as the Secretary. Our role is to review the Secretary's proposal and confirm and approve it if we conclude, on the basis of our independent judgment, that it comports with the dual statutory standard of providing consumers with the benefits of power at the lowest possible price consistent with good business practices as well as protecting the interests of the United States in amortizing its investment in the projects within a reasonable period.

The Secretary made an extensive presentation in support of the proposed rates with the filing and at the hearing. The heart of the presentation is what is known as the Columbia River Federal Power System-Repayment Study. Its purpose is to determine whether Bonneville's existing wholesale power rates will be sufficient to repay all obligations within a reasonable repayment period as provided by the statute. The Secretary showed that under the present rates, repayments would not be made in full within a reasonable period when certain future projects are taken into account, whereas the proposed rates would enable Bonneville to meet its obligations to Congress without a substantial adverse impact upon the economy of the region.

A basic element in Bonneville's Repayment Study is the "reasonable period of years" for the amortization of the Federal investment. It has long been established that 50 years is a reasonable period within which to repay the government's investment.[4] The 50-year repayment period has also been prescribed by the Bureau of the Budget as one of the criteria for its review of proposed Federal investment in hydro projects.[5] We see no reason to depart from the 50-year period here.

Bonneville uses a 40-year period in which to amortize the initial investment costs of its transmission facilities. Contemperaneous construction of the Bonneville Act by Bonneville has been that the transmission facilities should be amortized separately on the basis of their average service lives. Formerly Bonneville used a 35-year period, because it was thought that period represented the average service life of such facilities; it now believes that 40 years is the appropriate period. While some of the protestants contend that the 50-year period should be used for all facilities, we are of the opinion that it was entirely proper for Bonneville to use 40 years for the transmission facilities as representing the average service life of such facilities.

A question arises as to what constitutes the 50-year period. We agree with the Secretary that the system as a whole must be considered and that we should look at the period of repayment for the system. Bonneville sells power from a number of plants. These projects are integrated electrically and hydraulically. As other projects are built and commence operation, they will also be integrated into the system. Therefore, we think it entirely reasonable and proper to treat revenues and requirements as a whole in view of the contemplated developments extending into the later part of this century and to extend our consideration, as the Secretary does, to 50 years after the installations of all contemplated power generating and transmission facilities or approximately until the year 2046.[6] In following this method the Secretary applies estimated revenue from future projects to the amortization of existing projects, and likewise applies the revenue from existing projects, after they have been fully amortized, to the repayment of projects not as yet amortized.

Specifically the Secretary shows two repayment studies, one based on existing rates and one based on the proposed rates. He estimated annual revenues, until the year 2046, from which he subtracts the sum of estimates of annual operation and maintenance expenses, annual provision for replacements, and interest charges on the unamortized investment in power generating and

[5] Bureau of the Budget Circular No. A–47, December 31, 1952, p. 13.

[6] This was the procedure followed in *United States Department of the Interior, Southeastern Power Administration*, 32 FPC 4, 7.

transmission facilities. The remainder each year is the amount available for amortization of the original investment. The studies show that under the existing rates there would be some amortization of the power investment in every year until the entire investment is amortized, except for the years 1975, 1976 and 1977. Under the proposed rates, 1975 would be the only year in which there would be no amortization of investment costs.

The Secretary also shows annually (for both the existing and proposed rates) the unamortized investment compared with what he calls the "allowable unamortized investment". This last is the total investment in service less the items that have been completely amortized. Where the allowable unamortized investment is greater than the unamortized investment the repayment period standards are being met, but where the unamortized investment is not reduced fast enough so that it is greater than the allowable figure this means that, under the assumptions of the study, the standards of the statute are not being met. Under the existing rates the study shows the repayment standards are met until the year 2019 but then there is a deficit in each of the following 12 years. Under the proposed rates, however, the allowable figures remain higher than the unamortized investment through the year 2028 when all of the original investment is amortized.

Although we have given considerable attention to this study, we are fully aware that it is based on estimates and assumptions with regard to the building of certain projects a considerable distance in the future. The situation might be changed by an increase in revenues as the protestants point out or by the incurrence of additional obligations as discussed below. We will, of course, have an opportunity to review the effect of such changes in 1969 and at five-year intervals thereafter. In this review we are considering the needs of the system as they presently appear to us. Our conclusion on the Bonneville Repayment studies is that the new rates meet the standards of the statute.

In appraising the results of the repayment study we bear in mind that Bonneville has made a determined effort to lower costs and increase revenues so as to minimize the necessity for a rate increase. The beneficial effects which will result from the Pacific Northwest-Pacific Southwest Intertie and the treaty with Canada for joint development of the Columbia River are reflected in the payout schedule. Adoption of the 50-year system-repayment plan reduced payout requirements about $9 million per year. The use of new cost allocations for The Dalles, Grand Coulee, and McNary projects lowered the investment costs allocated to power by about $89 million. Re-evaluation of the service lives of transmission facilities resulted in using an average service life of 40 years, instead of 35 years. Even with all of these changes the repayment schedule based on existing rates demonstrates that the costs of some projects in the system could not be repaid within 50 years of their in-service dates.

We also take into account the distinct possibility that certain obligations will be greater than predicted. For instance it was assumed that for the three billion dollars of investment to be made in the next ten years the interest rate will remain the same as it is now. A mere one-eighth of a percent increase in the average rate of interest on that investment would amount to $3.75 million a year, or nearly the entire proposed rate increase. It was also assumed that operation and maintenance costs would not escalate beyond 1975; that the Hanford plant would continue to be used for atomic materials as well as power until 1972; and that the non-federal High Mountain Sheep project would not be completed until 1975. If High Mountain Sheep should

be completed earlier, the federal system's sales and revenues will be substantially less than estimated in the repayment study.

Moreover, the proposed rate increase ignores any possibility of a rise in the cost of construction. The first two projects, Bonneville and Grand Coulee, were very low cost and Chief Joseph not much more, while later dams have been at higher cost. Transmission costs have also risen although this increase has been limited by the use of automation and higher voltage lines which carry proportionately much more power. While such cost increases have already been taken into account, further increases may not have been considered in the repayment study. In view of these risks the manager of Bonneville, like any prudent manager of a business, should be allowed a reasonable margin of safety in meeting his obligations. Therefore based on the repayment study, the risks that might add to Bonneville's obligations and the possible increases in cost, we think that the relatively modest increase in the rate level here proposed was not only reasonable but obligatory.

A further question arises as to what service period we should consider in evaluating the adequacy of the rates established by the Secretary. Protestants claim that the Secretary errs in seeking now to establish rates adequate to insure the sufficiency of the repayment contributions throughout the 50-year system period, extending approximately until 2046. Protestants generally accept the validity of the system repayment period but argue that, since we must re-examine these rates in 1969, our statutory obligation is fulfilled if the present rates are adequate to keep the amortization payments current for the 50-year period following that date, or until the year 2019.

Were we to assume the protestants' position, we could not presently confirm that the rates established by the Secretary would insure repayment of the Federal investment within the period contemplated by the statute. We conclude, that the rates presently established must, under the projected assumptions, be sufficient to insure that the necessary contributions to the amortization of the Federal investment is made on schedule throughout the 50 years following the date of the investment in the last project on the system. Thus if implementation of the new rates were postponed until 1969, as shown by the presentation of the industrial protestants, there would be an actual failure to meet the repayment requirement in the year 2024. The margin of safety, particularly important in view of unforeseen events such as those discussed above, would be even smaller. Therefore, in order to avoid greater rate increases later, we think the rates should be adjusted to the extent presently necessary.

The protestants also object to the Secretary's use of an annuity basis for showing estimated annual costs of replacements. The necessity for estimating costs of replacements arises because some items appurtenant to the dams and generating equipment have service lives of less than the 50-year amortization and have to be replaced before that time. Likewise there are items of transmission equipment that will have to be replaced before the end of the 40-year period. Some of the protestants, however, argue that the power users should not have to pay for the amortization of the initial facilities and at the same time pay for necessary replacements. They would treat each replacement as an additional capital investment to be amortized over its service life, or to be amortized over a 50-year period.

In our opinion the Secretary exercised reasonable judgment in making provision for repaying replacement costs by adopting the annuity method, and the amount estimated for such costs is reasonable. The statutes (Section 7 of the Bonneville Act and Section 5 of the Flood Control Act) relate

to the amortization of the capital investment "over a reasonable period of years", a provision clearly for the purpose of recouping the government's investment within the 50-year period. There is in the filing before us more than one method of providing for amortization of the replacements. For most of the Corps projects the annuity is based on paying within the project's 50-year payout period all of the replacements made during that period. For a few of the Corps projects the annuity replacement is based on paying for all replacements within a 100-year period. For Bonneville's transmission system the replacement annuity will be paid from the date of the original investment until the end of the service life of the replacement. Thus those replaced items having a life extending beyond the payout period will leave some unpaid amount at the end of the 40-year period. A sinking fund is utilized by the Bureau of Reclamation that will accumulate the amount of each replacement by the time the replacement is made. However, this replacement annuity is only five percent of the total replacement annuity and is not a significant factor in the repayment analysis.

While the present customers are required to pay in part for replacement items at the same time the cost of the original units is being amortized, this is because of the mechanics of the annuity method used. The cost to customers will not be greater, even initially, since the adequacy of revenues is not tested on an individual project basis or on a year-to-year basis but rather over the repayment period for the whole system. Whether the purchasers of the power pay for the replacements from the date of the initial investment at a lower annual rate or commence paying at the time of the replacement at a necessarily higher figure, the resulting payout will be approximately the same. And while present customers, in effect, will be paying something for replacements to be utilized by their successors they will at the same time be paying less per year for the original items and for replacements already made. In short the fallacy of protestants' argument is that the validity of the Secretary's program for paying for replacements of a major system with varying service lives cannot be fairly tested by focusing on individual replacement items to be made in the future.

Turning to the other standard of the statute, the impact of the rate increase on the purchasers of power, we find nothing militating against the proposed increase. The statutory criterion of "encouraging the widest possible diversified use of electric energy," obviously does not mean rates so low as to prevent the Columbia Basin projects from meeting the statutory repayment criteria. We are, in effect, directed by this language to prevent an unjustified increase.

We find that Bonneville's proposed increase is justified, when the facts are considered. Bonneville has shown that the proposed increase will have little impact on the economy of the area and will not discourage the use of electric energy. As Bonneville points out, since the middle of 1962 Bonneville has entered into new contracts for the sale of 468,000 kw of firm power and 110,000 kw of interruptible power to industry. It is now engaged in negotiations for the sale of additional power.

The design of the new rates proposed by Bonneville has caused few protests. The customers, in general, endorse the proposed changes in rate design. Bonneville points out that modifications of the rate design are needed to recognize the changing economies of supplying energy from the Federal hydro projects in that the major impact of additional costs falls on building the supply of firm energy.

Bonneville recognized that a change in the rate structure would not affect all customers with absolute equality because of their different load characteristics and operations. However, it took steps to ameliorate the effect of the changes and to provide more flexibility. Among other things it relaxed the ratchet provisions applicable to demand charges, adopted a 60-minute instead of a 30-minute demand interval, and provided a discount for purchasers serving sparsely settled areas. For the first four years of service under the new rates it also provided a 2 percent floor and a 6 percent ceiling in rate increases for customers purchasing all of their energy requirements from Bonneville. A new grade of power, called modified firm, and no increase in the rate for interruptible power, is expected to limit the increase in power billings to direct-service industries to about 2 percent. In our opinion Bonneville, which consulted its customers at length, has arrived at a reasonable rate structure to meet the problems of itself and its customers, and we find that the rate structure is designed within the meaning of the statute to encourage the widest possible use of electric energy.

In view of the foregoing considerations we shall confirm and approve Bonneville's proposed rate schedules and general rate schedule provisions.

The Attorney-General of the State of Oregon and the Northwest Public Power Association have requested opportunity to file additional briefs. The Secretary filed in opposition to Oregon's request. In view of the time that all parties had to acquaint themselves with the proposed rates, the filings of data and arguments made before the hearing, and the full arguments made at the hearing itself, we are of the opinion that no purpose would be served by the filing of such briefs.

The Commission further finds:

(1) It is appropriate for the purposes of the Bonneville Act and Section 5 of the Flood Control Act of 1944 that Bonneville's Rate Schedules E–5, F–5, C–5, R–2, S–1, H–4, and its General Rate Schedule Provisions effective December 20, 1965, be confirmed and approved for a period ending December 20, 1969.

(2) It is appropriate for the purposes of the Bonneville Act and Section 5 of the Flood Control Act of 1944 that the special applications of Bonneville's rates and charges embodied in Docket No. E–6611, and the rates and charges contained in contracts with the cities of Coulee Dam and Grand Coulee, Docket No. E–6905, be likewise confirmed and approved for a period ending December 20, 1969. With respect to Docket No. E–6611 any stipulations as to purchase of firm power will also extend to purchase of the new class of modified firm power made available under the new rate schedules.

The Commission orders:

(A) The wholesale rate schedules, general rate schedule provisions, and the special applications of rates and charges referred to in the finding clauses are confirmed and approved for a period beginning December 20, 1965 and ending December 20, 1969.

(B) The requests for permission to file briefs by the Attorney-General of the State of Oregon and the Northwest Public Power Association are denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

ALABAMA POWER COMPANY, PROJECT NO. 618

ORDER APPROVING REVISED PROJECT EXHIBITS

(Issued December 15, 1965)

Application was filed on February 10, 1965, by Alabama Power Company, licensee for Project No. 618, for Commission approval of Revised Exhibit L and an "Addendum to Revised Exhibit M" to show proposed changes and modifications to the ungated portion of the spillway for the constructed Jordan Dam No. 1 development of the project, located adjacent to the proposed Jordan Dam No. 2 development of the licensee's Project No. 2146 also situated on the Coosa River, Alabama.

The license for Project No. 618 now provides for the installation of spillway gates on the ungated section of the Jordan Dam No. 1 spillway for the purpose of increasing the maximum normal water surface elevation of the Jordan reservoir from 245 to 252 feet. As shown on the Revised Exhibit L drawing, the licensee proposes to change the spillway gates from 18–34 feet wide by 18 feet high to 18–34 feet wide by 8 feet high, with spillway sill increased in elevation from 234 to 245 feet. The proposed changes will provide a full gated spillway in lieu of the present partly gate-controlled and partly ungated spillway.

The changes proposed are a result of continuing studies by the licensee to obtain optimum over-all benefits. The project design flood, when routed through the proposed modified spillway, will surcharge the Jordan Dam No. 1 reservoir water surface level to about elevation 262 feet, will result in a peak discharge of about 480,000 cfs, and will have a remaining freeboard of about 5 feet. The proposed modified spillway is considered stable and adequate under both normal and flood water conditions of loading. The normal pool elevation of 252 feet and power installation, as now provided for in the license, remain unaffected by the proposed spillway changes. The proposed modifications to the spillway will effect an appreciable savings in capital costs amounting to $706,500.

The Office of the Chief of Engineers has advised that the plans of the project structures affecting navigation are satisfactory, and the tracing of the revised Exhibit L has been approved pursuant to Section 4(e) of the Federal Power Act insofar as the interests of navigation are concerned.

The Commission finds:

The following described revised exhibits conform to the Commission's rules and regulations and should be approved as part of the license for the project, and the license Exhibit–L, Sheet No. 30A (FPC No. 618–63), which has been superseded, should be eliminated from the license for the project:

(1) Exhibit–L Revised, Sheet No. 30A (FPC No. 618–64) entitled "Dam, Plan and Section", and (2) "Addendum to Revised Exhibit M".

The Commission orders:

The revised exhibits described in the above finding and hereby approved as part of the license for Project No. 618, and the license exhibit described in the same finding as being superseded is hereby eliminated from the license for the project.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

H. L. HAWKINS & H. L. HAWKINS, JR., OPERATOR, ET AL., DOCKET NO. G-18077, ET AL.

ORDER ON MOTION FOR CLARIFICATION AND MODIFICATION OF OPINION NO. 475

(Issued December 15, 1965)

The Superior Oil Company on November 5, 1965, filed a motion for clarification and modification of Opinion No. 475 and order issued September 22, 1965, 34 FPC 897.

Superior's motion relates principally to increased rates it has filed for gas sold as a result of acquiring Skelly Oil Company's undivided one-half interest in the Pheasant Field, Matagorda County, Texas. Superior already had an undivided one-half interest in the field and on November 22, 1961, commenced deliveries to Florida Gas Transmission Company under certificates issued in Docket No. G-20359 (Rate Schedule No. 99). On August 1, 1962, Skelly transferred its interest (Rate Schedule No. 158) to Superior but an acceptable filing recording this fact was not made until March 3, 1965. By Commission letter of April 2, 1965, the transfer agreement was designated Supplement No. 2 to Superior's Rate Schedule No. 99 and was made effective August 1, 1962.

Meanwhile, on August 3, 1962, after the actual date that Skelly transferred its interest, Superior had filed a rate increase from 17.5 to 18.5 cents. This was designated in the Commission's files as Supplement No. 1 to Rate Schedule No. 99, was suspended, and became effective subject to refund on February 3, 1963.[1] At the time this increase was not treated by us as applicable to the former Skelly gas, but on March 3, 1965, Superior, under protest, filed a Supplement No. 3 applying the 17.5 to 18.5 cent rate increase to such gas. This increase was also suspended[2] and was permitted to go into effect subject to refund on September 3, 1965.

Superior states that information as to the beginning and end of the refund period is critical with respect to the former Skelly gas and also requests clarification of the refund period involved in these proceedings. In accordance with our order denying rehearing, any possible refunds applicable to the 17.5 cent price charged would extend from the date service commenced until superseding rates became effective. Thus with respect to gas from Superior's original interest in the Pheasant Field, the refund period would extend from November 22, 1961 until February 3, 1963, when the superseding 18.5 cent rate became effective. Upon further consideration, we are of the opinion that Superior's rate filing on August 3, 1962 should be treated as applicable to the gas from the Skelly interest as well as Superior's original interest. In fact we made the transfer effective August 1, 1962 before the rate filing. As a result, Superior's refund period applicable to the 17.5 cent price for the Skelly gas would commence August 1, 1962, the date Superior acquired Skelly's interest (as the Commission's letter of April 2, 1965 specifically states). The period, as in the case of Superior's original gas, would terminate on February 3, 1963.

[1] Docket No. RI63-49.
[2] Docket No. RI65-572.

In view of our position taken here the proceedings in Docket No. RI65–572 will be terminated and Supplement No. 3 to Superior's Rate Schedule No. 99 will be cancelled. The 18.5 cent increased rate for both Superior's original interest and the former Skelly interest will be subject to the proceedings in Docket No. RI63–49, which is consolidated with the Texas Gulf Coast Area Proceeding, Docket No. AR64–2. Of course, in defining the refund periods involved in the present proceedings we are not in any way delimiting the period or amount of refunds that might be due in Docket No. RI63–49 or the Area Proceedings.

The Commission orders:

(A) Superior's motion for clarification and modification is granted as indicated above.

(B) The proceedings in Docket No. RI65–572 are terminated and Supplement No. 3 to Superior's Rate Schedule No. 99 is cancelled.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

FRANK E. PEACOCK, PROJECT NO. 2427

ORDER MODIFYING ORDER ISSUING LICENSE ON APPLICATION FOR REHEARING

(Issued December 15, 1965)

On November 26, 1965, Frank E. Peacock (Applicant), filed an application for reconsideration of the Commission's order dated November 19, 1965, 34 FPC 1344, issuing license to the Applicant for unconstructed Project No. 2427 located on the Black River in Jefferson County, New York. Applicant requests that the license order issued be altered in two respects. First, he requests that the license run for a period of 30 years, starting on the first day of the first month of full operation, but in any event starting no later than December 1, 1969. Secondly, he requests that the final date by which construction of the project shall commence be July 1, 1969 and that the final date for completion of the project be December 1, 1969.

The order issuing license provided that the license shall be for a period of 30 years, effective as of October 1, 1965 and the license order established June 1, 1966 and May 31, 1968, respectively, as the dates for the commencement and completion of the construction of the project works.

In support of his request, Applicant represents that his lease for the use of the project lands is for 30 years commencing with the first full month of operation and that at best the plant cannot be placed in operation until a year after the placement of orders for the necessary machinery. In addition, Applicant anticipates that the conditions in the river will preclude the start of construction until at least July 1, 1966.

Under the circumstances recited by the Applicant, it would be appropriate to amend the license order for Project No. 2427 to extend the license term from September 30, 1995 to December 1, 1999. Since Section 13 of the Federal Power Act requires construction to commence within two years of the date of issuance of a license, we are unable to grant Applicant's second request, even if we were so disposed. However, it would appear to be appropriate under the circumstances mentioned above to extend the date by which bona

fide construction is to start from June 1, 1966 to October 1, 1967 and to extend the date for completion of said construction from May 31, 1968 to December 31, 1969.

The Commission orders:

(A) The fifth paragraph of the Commission's order dated November 19, 1965 issuing license to Frank E. Peacock for Project No. 2427 is hereby amended to read as follows:

According to the application for license, Applicant has contracted a 30-year lease with Niagara Mohawk Power Corporation for necessary water rights, a lease of the lands for the proposed project, and the purchase of project power. In the circumstances, the license herein granted shall be for a period of approximately 34 years, effective as of October 1, 1965 and terminating December 1, 1999. It should be noted that Article 22 of Form L–4 (Revised June 1, 1964, 32 FPC 839) which is being included among the conditions upon which this license is being issued, requires that the licensee shall make good any defective title to project lands in the event that the project is recaptured by the United States at the end of the license term. Consequently, we are including a license condition (Article 33) requiring the licensee, to obtain an option from Niagara Mohawk permitting him, or his successors or assigns to acquire land within the project boundary in the event the United States should exercise its rights to recapture the project at the end of the license term.

(B) Paragraph (A) of that order is hereby amended to read as follows:

(A) This license is hereby issued to Frank E. Peacock (Licensee) of Wilmette, Illinois, under Section 4(e) of the Federal Power Act (Act) for a period effective as of October 1, 1965, and terminating December 1, 1999, for the construction, operation and maintenance of Project No. 2427, located on the Black River, navigable waters of the United States, subject to the terms and conditions of the Act which is incorporated herein by reference as a part of this license, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(C) Article 31 of that order is hereby amended to read as follows:

The Licensee shall commence construction of the project works not later than October 1, 1967, shall thereafter in good faith and with due diligence, prosecute such construction and shall complete construction of such works not later than December 31, 1969.

Before Commissioners: Joseph C. Swidler, Chairman; Charles R. Ross, David S. Black and Carl E. Bagge.

ARKANSAS LOUISIANA GAS COMPANY, DOCKET NOS. CP64–125, CP62–219; CITIES SERVICE GAS COMPANY, DOCKET NO. CP64–131

ORDER CLARIFYING OPINION AND DIRECTING COMPLIANCE WITH THE COMMISSION'S RULES AND REGULATIONS

(Issued December 16, 1965)

On November 19, 1965, the staff of the Commission filed a motion requesting clarification of Opinion No. 472, issued August 31, 1965, 34 FPC 659, in Trans-

western Pipeline Company, *et al.*, Docket No. G–20464, *et al.*, concerning the scope of the supplemental hearing established therein—specifically whether the supplemental hearing, as it relates to the remanded applications in Docket Nos. CP64–125 and CP62–219, is or is not to be limited to the issues of gas supply and markets. Arkansas Louisiana Gas Company (Arkla) on November 29, 1965, filed an answer in opposition to staff's motion. Arkla contends in essence that the examiner found that Arkla had satisfied all the requirements of public convenience and necessity except as to gas supply and markets and since the Commission adopted his decision with only one modification (the supplemental hearing should consider any other proposals to meet City Service Gas Company's (Cities) additional requirements) the only issues for the supplemental hearing related to Arkla's remanded applications are gas supply and markets.

Arkla overlooks the fact that the Commission specifically held that the Examiner's decision was ambiguous with respect to the scope of the supplemental hearing and expressly modified his decision *in two respects* to make clear that the purpose of the supplemental hearing was twofold—"to reconsider Arkla's application (or any amendment thereto)" and to consider any other proposals to meet Cities' needs. Gas supply and market data are so materially interrelated with the other aspects of any major project to make a substantial new sale that Arkla's failure to present such evidence made it impossible to give intelligent consideration to any of the major prerequisites of public convenience and necessity. Indeed for this very reason we also did not adopt the Examiner's decision with respect to the proper initial rate level. Arkla incorrectly maintains that this involved only the issue of whether the proposed rate should or should not be reduced by 1.0¢. Our language has a much broader meaning and makes it abundantly clear that, since we were not approving Arkla's application, it was unnecessary to even pass upon any aspect of the rate issue (which, as staff points out, involves the question of the proper allocation of costs and cost of service method).

In setting forth that market and supply evidence should be presented at the supplemental hearing it was not our intention to limit the issues which could be raised on remand solely to these matters. On the contrary, it was done so that we could realistically reconsider any issues which might be raised by the parties at the supplemental hearing. It would be unwise to prejudge what effect a full market and supply showing might have on the other aspects of Arkla's application, including the proper rate level. Arkla, of course, is not to be restricted solely to the presentation of gas supply and market evidence but may present whatever evidence it deems necessary to meet any issues raised by the parties.

Further, since Arkla failed to present, either in its application or as part of its evidence, all the information required by our Rules and Regulations, the Commission believes that the market, gas supply, or any other evidence Arkla desires to present in the supplemental hearing should include at least the information required by the appropriate subsection of Section 157.14 of the Commission's Rules and Regulations.

The Commission orders:

(A) The motion of the Commission staff filed on November 19, 1965, is hereby granted.

(B) For the reasons set out above the supplemental hearing established by Opinion No. 472 with respect to the remanded applications of Arkla is not to be limited solely to the issues of gas supply and markets—but was ordered

to reconsider the applications in their entirety in the light of the additional evidence to be presented by Arkla.

(C) The gas supply and market evidence and any other evidence Arkla desires to present in the supplemental hearing shall include at least the information required by the appropriate subsection of Section 157.14 of the Commission's Rules and Regulations.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

PANHANDLE EASTERN PIPE LINE COMPANY, DOCKET NO. CP66-21; UNION TEXAS PETROLEUM, A DIVISION OF ALLIED CHEMICAL CORPORATION (OPERATOR), DOCKET NO. CI66-27

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY, ACCEPTING RATE SCHEDULE FOR FILING AND PERMITTING RATE SCHEDULE TO BECOME EFFECTIVE

(Issued December 16, 1965)

On July 19, 1965, Panhandle Eastern Pipe Line Company (Panhandle) filed in Docket No. CP66-21 an application, as supplemented on August 13 and October 13, 1965, pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing (1) the construction and operation of 32.5 miles of 20-inch pipeline extending from a point in Woods County, Oklahoma, on Panhandle's existing Elk City Line, through Alfalfa County, to a point of connection with the Chaneydell processing plant to be constructed by Union Texas Petroleum (Union), a Division of Allied Chemical Corporation, in Major County, Oklahoma; (2) the acquisition of a one-third interest in the compressor facilities to be installed by Union in the Chaneydell Area to compress part of the gas from 17 psia to over 800 psia; and (3) the construction and operation of the Alva Compressor Station with 5,000 horsepower on the said Elk City Line on the downstream side of the junction with the proposed lateral, as more fully set forth in Panhandle's application.

On July 14, 1965, Union filed in Docket No. CI66-27 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the sale to Panhandle of approximately 75,000 Mcf of natural gas per day under a 20-year contract dated July 2, 1965, and amended July 6, 1965, as more fully set forth in Union's application.

The proposed sale is of residue gas which will be available after processing of casinghead and gas-well gas at Union's Chaneydell Plant. Pending completion of the plant, approximately 25,000 Mcf per day of unprocessed gas will be delivered.

Union may, upon proper notice to Panhandle, increase deliveries up to 125,000 Mcf per day after the plant is in operation. Panhandle's consent is not required for any such increase.

Union has simultaneously submitted the contract for filing as its FPC Gas Rate Schedule. The price charged by Union under the contract is 15.0 cents per Mcf, subject to an upward or downward Btu adjustment. The 15.0 cents base price equals the area ceiling for initial service, and the Btu adjustment

meets the criteria established in our Opinion No. 464 issued on June 10, 1965, 33 FPC 1228. Union proposes to meet Panhandle's fluctuating needs by adjusting the flow of gas-well gas, but the rate of delivery is not to vary more than 25 percent from the contract volume in effect at any time.

The purpose of the proposal is to augment Panhandle's system gas supply. No new sales are proposed.

The estimated cost attributable to Panhandle of the facilities to be constructed is $4,823,000, which will be financed out of general sources available to Panhandle. The proposal is economically feasible.

Notices of the filing of Panhandle's and Union's applications were published in the Federal Register on July 30, 1965 (30 F.R. 9560) and July 27, 1965 (30 F.R. 9333), respectively. No protest, petition to intervene, or notice of intervention has been filed in this proceeding.

At a hearing held on December 16, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the applications and exhibits submitted in support of the authorizations sought herein, and upon consideration of the record,

The Commission finds:

(1) Panhandle Eastern Pipe Line Company, a Delaware corporation having its principal place of business in Kansas City, Missouri, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of September 23, 1942, in Docket Nos. G–200 and G–207 (3 FPC 273).

(2) Union Texas Petroleum, a Division of Allied Chemical Corporation, will be engaged in the sale of natural gas in interstate commerce for resale for ultimate public consumption, subject to the jurisdiction of the Commission, and will, therefore, be a "natural-gas company" within the meaning of the Natural Gas Act upon the commencement of the service under the authorization granted hereinafter.

(3) The facilities hereinbefore described and as more fully described in the application filed by Panhandle in this proceeding are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Panhandle and the sale of natural gas by Union to Panhandle are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(4) Panhandle and Union are able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(5) The construction and operation of the proposed facilities by Panhandle and the sale of natural gas by Union to Panhandle, as proposed, are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(6) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Union's FPC Gas Rate Schedule be accepted for filing to become effective on the date of initial delivery.

(7) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Panhandle's compliance with all Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), (d)(2), (d)(3) and (e) of Section 157.20 of said Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to Panhandle Eastern Pipe Line Company authorizing the construction, acquisition and operation of the facilities as hereinbefore described and as more fully described in Panhandle's application in this proceeding, upon the terms and conditions of this order.

(B) A certificate of public convenience and necessity is issued to Union Texas Petroleum, a Division of Allied Chemical Corporation, to sell natural gas to Panhandle, as hereinbefore described and as more fully described in Union's application in this proceeding.

(C) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Panhandle's compliance with all Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), (d)(2), (d)(3) and (e) of Section 157.20 of said Regulations.

(D) The facilities authorized by this order shall be completed and placed in actual operation and the transportation of natural gas thereby, as authorized in paragraph (A) above, shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within one year from the date of this order.

(E) Union's proposed related rate schedule is accepted for filing to become effective on the date of initial delivery of natural gas pursuant to this authorization, and is designated as follows:

Description and Date of Instrument	*Rate Schedule Designation*
Contract 7–2–65	Union Texas Petroleum, a Division of Allied Chemical Corporation (Operator), FPC Gas Rate schedule No. 83.
Ltr. Agreement 7–2–65	Supplement No. 1.
Ltr. Agreement 7–6–65	Supplement No. 2.

Before Commissioners: Joseph C. Swidler, Chairman; Charles R. Ross, David S. Black and Carl E. Bagge.

NATURAL GAS PIPELINE COMPANY OF AMERICA, DOCKET NO. CP66–96

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued December 17, 1965)

On October 7, 1965, Natural Gas Pipeline Company of America (Applicant), filed in Docket No. CP66–96 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction during the calendar year 1966 and the operation of miscellaneous field facilities to enable Applicant to take into its certificated main pipeline system natural gas which will be purchased from producers thereof, all as more fully set forth in the application.

The purpose of this "budget-type" application is to enable Applicant to act with reasonable dispatch in contracting for and connecting to its pipeline system supplies of natural gas in various producing areas generally co-extensive with said system.

The total aggregate cost of such construction, to be financed out of funds currently on hand, will not exceed $2,000,000, and the cost of any single project is to be limited to $500,000.

Due notice of the filing of the application was published in the Federal Register on October 22, 1965 (30 F.R. 13475). No petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on December 9, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Natural Gas Pipeline Company of America, a Delaware corporation having its principal place of business in Chicago, Illinois, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of November 7, 1958, in Docket No. G-9966 (20 FPC 694).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit within 60 days after the expiration of the authorization granted hereinafter a statement in compliance with Section 157.7(b) of the Commission's Regulations under the Natural Gas Act.

(6) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(7) The authorization hereinafter granted should be limited to construction during the calendar year 1966 and the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $2,000,000, with no single project to exceed a cost of $500,000.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity is issued authorizing Applicant, Natural Gas Pipeline Company of America to construct during the calendar year 1966 the proposed facilities hereinbefore described, as more fully described in the application in this proceeding, and to operate such facilities only to take natural gas supplies from producers who have received authorization from the Commission to sell natural gas to said Applicant.

(B) Applicant shall submit within 60 days after the expiration of the authorization granted by paragraph (A) above a statement in compliance with Section 157.7(b) of the Commission's Regulations under the Natural Gas Act.

(C) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(D) The authorization granted in paragraph (A) above is limited to construction during the calendar year 1966 and the total expenditures for facilities to be constructed thereunder are limited to a maximum of $2,000,000, with no single project to exceed a cost of $500,000.

Before Commissioners: Joseph C. Swidler, Chairman; Charles R. Ross, David S. Black and Carl E. Bagge.

PACIFIC GAS TRANSMISSION COMPANY, DOCKET NOS. CP65-213, CP65-214, CP65-215

ORDER DENYING RECONSIDERATION, WAIVER OF THE COMMISSION'S RULES AND MAKING DETERMINATION OF THE QUESTION OF "EXTRAORDINARY CIRCUMSTANCES"

(Issued December 17, 1965)

On October 22, 1965, and October 26, 1965, the State of Texas (Texas) and the California Gas Producers Association, The Oil Producers Agency of California and the Jade Oil and Gas Company [California Gas Producers] requested that the Commission reconsider its rejection of the motion that they had previously directed to it requesting a reversal of rulings made by the Presiding Examiner denying the issuance of subpoenas duces tecum.[1]

The above-described Movants also requested that the Commission waive its rules, if necessary, and that the Commission determine the question of whether there exists, as they allege, extraordinary circumstances, that warrant the Commission's acting upon the appeal taken by them from the Presiding Examiner's rulings.

Section 1.28(a) of the Commission's Rules of Practice and Procedure provides that "Rulings of Presiding Officers may not be appealed from during the course of hearings except in extraordinary circumstances where prompt decision by the Commission is necessary to prevent detriment to the public interest * * *"

At a prehearing conference held on July 22, 1965, Texas advised that certain testimony and exhibits submitted by Barry Hunsaker, Chief Pipeline Engineer for El Paso Natural Gas Company (El Paso), in the Gulf Pacific hearings (Docket No. CP64-76) would be sought and that it would endeavor to have these made part of the record in these proceedings.

Texas alleged that it could show through the presentation of this Witness that there is an alternative method of supplying gas to California at a firm price and a cheaper price than the gas sought to be imported into California under the pending application.

---

[1] The Independent Petroleum Association of America, The Texas Independent Producers and Royalty Owners Association, The West Central Texas Oil and Gas Association and The Permian Basin Petroleum Association joined in the motions for reconsideration filed by Texas and California Producers Association. For the purposes of this order all of the aforementioned parties either sponsoring or supporting the aforesaid applications for reconsideration will be referred to as Movants.

At the same prehearing conference the California Gas Producers also advised that they sought certain testimony proffered by the Witness McKinney in the Gulf Pacific hearings, *supra*. The Witness McKinney purportedly testified in the Gulf Pacific hearing that if the Gulf Pacific Project were approved by the Commission, The Pacific Lighting Companies would cut-back on their purchase of gas from El Paso and Transwestern Pipeline Company (Transwestern). California Gas Producers contend that the testimony of the Witness McKinney would show that this cut-back would be large enough to afford Pacific Gas & Electric Company (P.G. & E.) with an alternate supply of gas that could be readily substituted for the Canadian importation of natural gas proposed herein (pg. 2 of California Gas Producers motion filed September 21, 1965). They further allege in the latter motion that these additional supplies of natural gas would be available to P.G. & E. at a lower cost than the proposed Canadian supply of natural gas.[2]

On September 16, 1965, the Presiding Examiner, after hearing oral argument, denied the request of Texas and The California Gas Producers for the issuance of subpoenas duces tecum with respect to the aforementioned witnesses and certain material they presented in the Gulf Pacific hearings.

On September 21, 1965, the above-noted Movants requested that the Presiding Examiner certify his ruling denying their request for the issuance of subpoenas duces tecum for the Witnesses Hunsacker and McKinney to the Commission. This request was denied by the Presiding Examiner.

On the same date, the above Movants filed a motion with the Commission requesting it to reverse the ruling of the Presiding Examiner and to issue the subpoenas duces tecum as requested.

By letter dated October 15, 1965, the Secretary of the Commission rejected the motions to reverse the Ruling of the Presiding Examiner. The Secretary in his letters to these movants rejecting their motions stated:

> * * * The Presiding Examiner found "* * * no extraordinary circumstances here * * * where prompt decision on this question is required by the Commission or is necessary to prevent detriment to the public interest" (See Transcript Page 816), and thereby refused to certify to the Commission the ruling which is the subject of the tendered filing. Moreover, the motion does not recite pressing reasons for immediate review of the Examiner's ruling by the Commission.

Thereafter, Texas on October 22, 1965, and the California Gas Producers on October 26, 1965, filed applications for reconsideration of the rejection of its motion to reverse the Ruling of the Presiding Examiner and to issue subpoenas duces tecum as requested.

We have examined the pleadings relating to the motion and see nothing therein which would justify our intercession in the normal processes of the hearing. The determination of whether material sought to be secured by subpoena bears sufficient materiality and relevance is a matter on which the hearing examiner will normally be much better equipped to pass. Our intercession may occasionally be warranted where the examiner's ruling reflects a misunderstanding as to the scope of the proceeding or where there are extraordinary circumstances which require avoidance of any possibility of delay in

---

[2] California Gas Producers point out in their motion that El Paso's Rate Schedule G–X (Excess Gas Service) would be available to P.G. & E., because of the cut-backs envisaged by McKinney's testimony. They claim that the rate chargeable under such excess gas service is 22.22 cents per Mcf (14.73 psia). They also point out that Transwestern's Rate Schedules, covering deliveries of gas to California make provision for a rate of 21 cents for deliveries that are cut-back by The Pacific Lighting Companies (Transwestern LX Gas).

the event the examiner's ruling were to be found to be erroneous. Nothing of the kind is involved here. We note that the movants, with the approval of the examiner, have made an offer of proof with respect to the testimony which is the subject of the motion. It will be available for our consideration when the case comes before us for decision. We are of the opinion that this is the proper way to handle the matter.

The Commission finds:

(1) Movants have not demonstrated the existence of any pressing reasons that require a waiver of the Commission's rules.

(2) Movants have failed to establish the existence of extraordinary circumstances contemplated by Section 1.28(a) of the Commission's Rules of Practice and Procedure that warrant an appeal by them to the Commission of the aforementioned rulings of the Presiding Examiner in the instant proceedings.

(3) The public convenience and necessity requires that the applications for reconsideration filed herein with the Commission by the Movants be denied in all respects.

The Commission orders:

(A) The request by Movants for a waiver of the Commission Rules is denied.

(B) The request for reconsideration of the rejections of motions filed by Movants with the Commission for a reversal of rulings made by the Presiding Examiner is denied.

Before Commissioners: Joseph C. Swidler, Chairman; Charles R. Ross, David S. Black and Carl E. Bagge.

ST. CROIX PAPER COMPANY, PROJECT NO. 2492

ORDER DENYING PETITION TO INTERVENE

(Issued December 17, 1965)*

On February 24, 1965 a petition to intervene in the above-entitled license proceeding was filed by Philip J. Hennessery, III (Petitioner) for himself and in behalf of others similarly situated.

Petitioner states that he is a joint owner of a plot of land, together with improvements thereon, situated on the shores of Spednic Lake in the town of Vanceboro, Washington County, Maine and that he represents 137 persons who live and own property in the vicinity of Vanceboro, Maine and St. Croix, New Brunswick, Canada, some of whom are owners of Spednic Lake shore properties and some of whom derive their income solely or in part from guiding, outfitting and providing accommodations and other services for fishermen and sportsmen visiting the area.

Petitioner alleges that he and those persons he represents may be aggrieved by the issuance of a license to the St. Croix Paper Company for the Vanceboro Dam, Project No. 2492. Petitioner asserts that the maximum and minimum water levels proposed by the Applicant are unjust and unreasonable and will adversely affect the properties of petitioner, and other owners of lake shore properties. An answer to the petition was filed by the St. Croix Paper Company.

---

*See orders granting and denying rehearing issued February 8, 1966 and March 11, 1966, 35 FPC 207 and 372.

In its application for license filed on November 16, 1964, the Applicant proposes to replace an existing earth dam with a new concrete and earth dam to be located a few feet upstream from the present location on the St. Croix River. According to the application there will be no change in water levels which are currently operated at a maximum of 385.86 feet mean sea level datum. Therefore, the effect of the proposed construction upon petitioner's property should not be any different from that of the existing earthfill dam.

The International Boundary between the Province of New Brunswick, Canada and the State of Maine runs through Spednic Lake and follows the East Branch of the St. Croix River. Consequently, the operating levels of the Lake are subject to the jurisdiction of the International Joint Commission (IJC). The IJC held a hearing on this matter on September 17, 1964, at which time camp owners from both Canada and the United States participated. By an order issued on October 15, 1965, the IJC approved the proposed construction by the St. Croix Paper Company and provided, among other things, that the elevation of Spednic Lake near Vanceboro shall not exceed 385.86 feet mean sea level, the present elevation of the Lake.

The Commission finds:

Intervention by the Petitioner in this proceeding has not been shown to be necessary or appropriate in carrying out the provisions of the Federal Power Act.

The Commission orders:

The aforesaid petition to intervene in this proceeding, is hereby denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

SOHIO PETROLEUM COMPANY, DOCKET NO. CI66-193

ORDER DENYING APPLICATIONS FOR REHEARING OR RECONSIDERATION

(Issued December 17, 1965)

On November 18, 1965, The Philadelphia Gas Works Division of The United Gas Improvement Company (PGW) filed an application for rehearing or reconsideration of the Commission's letter-order issued on November 5, 1965, granting a temporary certificate to Sohio Petroleum Company (Sohio) authorizing the sale of natural gas to Transcontinental Gas Pipe Line Corporation (Transcontinental) from the Johnson Bayou Field, Cameron Parish, South Louisiana Area. On December 3, 1965, the Public Service Commission of the State of New York (New York) filed a similarly entitled application.

The temporary certificate was issued subject to several express conditions, among which is the condition allowing Sohio to collect 20.625¢ per Mcf at 15.025 psia subject to Sohio's refunding to Transcontinental from the date of initial delivery, with interest at 7% per annum, any amounts collected in excess of the amounts resulting from the rate finally determined to be required by the public convenience and necessity in this docket; it was also stated that refunds would not be required below a total rate of 20.0¢ per Mcf at 15.025 psia, inclusive of any tax reimbursement.

PGW asserts that the Commission erred in the following respects: (1) That the Commission made a major substantive decision in Docket No. CI66-193

prior to acting upon petitions to intervene therein; and, (2) That the Commission abused its discretion in granting a temporary certificate in Docket No. CI66–193 upon the conditions set forth. New York asserts that this Commission's determination of the proper refund floor is erroneous.[1]

The Commission has carefully considered applicants' specifications of error but finds nothing therein to justify granting a formal rehearing or reconsideration of the letter-order of November 5, 1965. As to PGW's first contention, the Commission points out that it made an express finding that an emergency existed, that prompt action was therefore necessary, and that the decision to make the temporary grant was well within the realm of the Commission's discretion. Moreover, the Commission's action was taken after full consideration of the arguments advanced by PGW.

PGW's chief objection, of course, is that the Commission did not accept its argument for an 18.25¢ per Mcf refund floor, which is apparently based on Staff's opinion that such rate is the just and reasonable price for such gas in the South Louisiana area. The Commission's consistent position in these certificate cases has been that the proper standard for any refunds resulting from a temporary price which is subsequently found to be too high is the "in-line" price at which it will certificate sales pending determination of the just and reasonable rate. The right of the Commission to permanently certificate sales at the "in-line" price has been recently sustained by the Supreme Court in the *Callery* case.[2] As Justice Douglas states (34 U.S.L. Week 4047, 4048):

> Consumer protection is afforded by keeping the "in-line" price at the level where substantial amounts of gas have been certificated to enter the market under other contemporaneous certificates, no longer subject to judicial review or in any way "suspect". We believe the Commission can properly conclude under § 7 that adequate protection to the public interest requires as an interim measure that gas not enter the interstate market at prices higher than existing levels. To consider in this § 7 proceeding the mass of evidence relevant to the fixing of just and reasonable rates under § 5 might in practical effect render nugatory any effort to fix initial prices.

The Supreme Court's *Callery* decision also makes clear that refunds based upon the difference between the price charged and the proper refund price also are appropriate (34 U.S.L. Week 4047, 4049):

> We think that the Commission could properly measure the refund by the difference between the rates charged and the "in-line" rates to which the original certificates should have been conditioned. The Court of Appeals would delay the payment of the refund until the "just and reasonable" rate could be determined. We have said elsewhere that it is the duty of the Commission, "where refunds are found due, to direct their payment at the earliest possible moment consistent with due process". *Federal Power Commission* v. *Tennessee Gas Transmission Co.*, 371 U.S 145, 155. These excessive rates have been collected since 1958; under the circumstances, the Commission was not required to delay this refund further.

---

[1] New York points out that the Commission failed to serve a copy of the letter-order upon it. The Commission sincerely regrets this inadvertent omission but feels no substantial harm has resulted.

[2] *United Gas Improvement Co., et al.* v. *Callery Properties, Inc., et al.*, 382 U.S. 223 (1965).

It is suggested that whatever the merits of the position in *Callery*, the present case involves south Louisiana and a decision in Docket No. AR61–2 fixing the just and reasonable price for the sale can be expected soon. It is clear, however, that even if we are able to decide the case in 1966, as we hope, that in view of the certainty of court review no actual payments of refunds could be expected for a year or more afterwards. From the guidelines established by *Callery* we should be able to arrive at a final decision in the certificate proceeding long before this time. Under these circumstances we see no reason for departing from our previous course of action in this type of case.

The Commission finds:

The specifications of error advanced as grounds for rehearing or reconsideration in applicants' applications present no facts or legal principles which would warrant any change or modification in the Commission's letter-order of November 5, 1965, in Docket No. CI66–193.

The Commission orders:

The above-described applications for rehearing or reconsideration of the Commission's letter-order of November 5, 1965, Docket No. CI66–193 are denied

---

Before Commissioners: Joseph C. Swidler, Chairman; Charles R. Ross, David S. Black and Carl E. Bagge.

TRANSWESTERN PIPELINE COMPANY, DOCKET NO. CP66–89

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued December 17, 1965)

On October 1, 1965, Transwestern Pipeline Company (Applicant) filed in Docket No. CP66–89 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction during the calendar year 1966 and the operation of miscellaneous field facilities to enable Applicant to take into its certificated main pipeline system natural gas which will be purchased from producers thereof, all as more fully set forth in the application.

The purpose of this "budget-type" application is to enable Applicant to act with reasonable dispatch in contracting for and connecting to its pipeline system supplies of natural gas in various producing areas generally co-extensive with said system.

The total aggregate cost of such construction, to be financed out of funds currently on hand, will not exceed $1,500,000, and the cost of any single project is to be limited to $375,000.

Due notice of the filing of the application was published in the Federal Register on October 19, 1965 (30 F.R. 13299). No petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on December 9, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Transwestern Pipeline Company, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas com-

pany" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of October 10, 1963, in Docket No. CP63-290 (30 FPC 997).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit within 60 days after the expiration of the authorization granted hereinafter, a statement in compliance with Section 157.7(b) of the Commission's Regulations under the Natural Gas Act.

(6) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(7) The authorization hereinafter granted should be limited to construction during the calendar year 1966 and the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $1,500,000, with no single project to exceed a cost of $375,000.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity is issued authorizing Applicant, Transwestern Pipeline Company to construct during the calendar year 1966 the proposed facilities hereinbefore described, as more fully described in the application in this proceeding, and to operate such facilities only to take natural gas supplies from producers who have received authorization from the Commission to sell natural gas to said Applicant.

(B) Applicant shall submit within 60 days after the expiration of the authorization granted by paragraph (A) above statements under oath in compliance with Section 157.7(b) of the Commission's Regulations under the Natural Gas Act.

(C) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(D) The authorization granted in paragraph (A) above is limited to construction during the calendar year 1966, and the total expenditures for facilities to be constructed thereunder are limited to a maximum of $1,500,000, with no single project to exceed a cost of $375,000, and shall not be interpreted as authorization to attach new customers or to increase the volume of sales to existing customers.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

ALABAMA-TENNESSEE NATURAL GAS COMPANY, DOCKET NO. CP65–197

ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued December 20, 1965)

On October 12, 1965, Alabama-Tennessee Natural Gas Company (Petitioner) filed in Docket No. CP65–197 a petition to amend the order of the Commission issuing a certificate of public convenience and necessity, 33 FPC 905, in said docket by authorizing the delivery of an additional quantity of natural gas to Reynolds Metals Company (Reynolds) on a firm basis, all as more fully set forth in the petition.

Petitioner proposes to increase its firm deliveries of natural gas to Reynolds near Muscle Shoals, Alabama, from 12,000 Mcf per day to 13,000 Mcf per day. The contract for the additional quantity provides for deliveries beginning September 16 and continuing through April 15 during the 1965–66 and 1966–67 winter periods.

Petitioner has heretofore been authorized to sell and deliver an additional 3,180 Mcf of natural gas per day to the City of Huntsville, Alabama. The City of Huntsville has advised Petitioner that it will not need the additional gas during the 1965–66 winter heating season and that it has no objection to Petitioner's use of the gas to serve other customers providing that the volume can be made available to the City of Huntsville during the 1966–67 winter heating season. Petitioner proposes to serve Reynolds from the volume heretofore allocated to the City of Huntsville and states that it will request in a future application authorization to deliver to Reynolds the additional quantity during the 1966–67 winter period.

No additional facilities are required to deliver the additional quantity to Reynolds.

After due notice no petition to intervene, notice of intervention or protest to the granting of the petition has been received.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the order issuing a certificate of public convenience and necessity in Docket No. CP65–197 should be amended as hereinafter ordered.

The Commission orders:

(A) The order issuing a certificate of public convenience and necessity in Docket No. CP65–197 is amended by authorizing Petitioner to deliver an additional 1,000 Mcf of natural gas per day on a firm basis to Reynolds, and in all other respects said order shall remain in full force and effect.

(B) The certificate issued in Docket No. CP65–197 shall not entitle Reynolds to whom firm deliveries are authorized herein to any priorities or rights to additional gas for meeting any future increases in its requirements at the expense of firm resale customers desiring to acquire additional gas to meet any future increases in their requirements.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

ARKANSAS LOUISIANA GAS COMPANY, DOCKET NO. CP66-144

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued December 20, 1965)

On November 8, 1965, Arkansas Louisiana Gas Company (Applicant) filed in Docket No. CP66-144 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction during the calendar year 1966 and the operation of miscellaneous field facilities to enable Applicant to take into its certificated main pipeline system natural gas which will be purchased from producers thereof, as more fully set forth in the application.

The purpose of this "budget-type" application is to augment Applicant's ability to act with reasonable dispatch in contracting for and connecting to its pipeline system supplies of natural gas in various producing areas generally co-extensive with said system.

The expenditures under the entire authorization will not exceed $3,908,300, whereas no individual project will exceed the cost of $500,000. The financing of the proposed construction will be from Applicant's cash on hand and from its cash generated from operations.

Due notice of the filing of the application was published in the Federal Register on November 24, 1965 (30 F.R. 14617). No protest, petition to intervene or notice of intervention has been filed in this proceeding.

At a hearing held on December 16, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Arkansas Louisiana Gas Company, a Delaware corporation having its principal place of business in Shreveport, Louisiana, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of January 26, 1943, in Docket No. G-252 (3 FPC 910).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit within 60 days after the expiration of the authorization granted hereinafter, a statement in compliance with

subparagraph (3) of Section 157.7(b) of the Commission's Regulations under the Natural Gas Act.

(6) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(7) The authorization hereinafter granted should be limited to construction during the calendar year 1966 and the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $3,908,300, with no single project to exceed a cost of $500,000.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity is issued authorizing Applicant, Arkansas Louisiana Gas Company, to construct during the calendar year 1966, the proposed facilities hereinbefore described, as more fully described in the application in this proceeding, and to operate such facilities only to take natural gas supplies from producers who have received authorization from the Commission to sell natural gas to Applicant.

(B) Applicant shall submit within 60 days after the expiration of the authorization granted by paragraph (A) above a statement in compliance with subparagraph (3) of Section 157.7(b) of the Commission's Regulations under the Natural Gas Act.

(C) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(D) The authorization granted in paragraph (A) above is limited to construction during the calendar year 1966, and the total expenditures for facilities to be constructed thereunder are limited to a maximum of $3,908,300, with no single project to exceed a cost of $500,000.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

CITIES SERVICE GAS COMPANY, DOCKET NO. CP66–113

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued December 20, 1965)

On October 18, 1965, Cities Service Gas Company (Applicant) filed in Docket No. CP66–113 an application pursuant to Section 7(c) of the Natural Gas Act, as implemented by Section 157.7(c) of the Commission's Regulations under the Act, for a certificate of public convenience and necessity authorizing the construction during the calendar year 1966 and the operation of certain natural gas facilities, all as more fully set forth in the application in this proceeding.

Specifically, Applicant proposes to construct facilities necessary for (a) the direct sales of natural gas to consumers located in areas outside the franchise area of any local distributor, and (b) miscellaneous rearrangements not re-

312–270—69——97

sulting in any change of service rendered by means of the facilities involved, including changes in existing field operations and relocation of existing sales and transportation facilities when required by highway construction, dam construction, development of private property, industrial plant expansion and other similar reasons.

Applicant proposes to construct for direct sales a maximum of sixty lateral and loop lines with maximum lengths of five miles each and maximum diameters of six inches, together with taps, metering and appurtenant facilities.

Applicant proposes to construct facilities for thirty miscellaneous rearrangements with maximum diameter pipe of thirty inches and the maximum length of pipe for each miscellaneous rearrangement project estimated at one mile.

The total cost of facilities proposed under this application will not exceed a maximum of $300,000 and the total deliveries to any one consumer will not exceed a maximum of 100,000 Mcf of natural gas per year. The cost of facilities will be financed out of treasury cash.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on December 16, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Cities Service Gas Company, a Delaware corporation having its principal place of business in Oklahoma City, Oklahoma, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of December 28, 1943, in Docket No. G–298 (4 FPC 471).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the proposed transportation of natural gas by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(6) The authorization hereinafter granted should be limited to construction during the calendar year 1966 and the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $300,000, with the total deliveries to any one customer not to exceed a maximum of 100,000 Mcf of natural gas per year.

(7) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit within 60 days after the expiration of the authorization granted hereinafter, a statement in compliance with

Section 157.7(c)(8) of the Commission's Regulations under the Natural Gas Act.

(8) The certificate issued hereinafter should be conditioned upon Applicant's compliance with the provisions of Section 157.7(c)(7) of the aforesaid Regulations.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity is issued authorizing Applicant, Cities Service Gas Company, to construct during the calendar year 1966 and operate the proposed facilities for the sale of natural gas to direct customers and for miscellaneous rearrangements as hereinbefore described, as more fully described in the application in this proceeding, and as hereinafter provided.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(C) The authorization granted in paragraph (A) above is limited to construction during the calendar year 1966 and the total expenditures for facilities to be constructed thereunder are limited to a maximum of $300,000, with the total deliveries to any one customer limited to a maximum of 100,000 Mcf of natural gas per year.

(D) Applicant shall submit within 60 days after the expiration of the authorization granted by paragraph (A) above a statement in compliance with Section 157.7(c)(8) of the Commission's Regulations under the Natural Gas Act.

(E) The certificate issued by paragraph (A) above is expressly conditioned upon Applicant's compliance with the provisions of Section 157.7(c)(7) of the aforesaid Regulations.

(F) This certificate shall not entitle any industrial customers to whom firm deliveries are authorized herein to any priorities or rights to additional gas for meeting any future increases in their requirements at the expense of resale customers desiring to acquire additional gas to meet any future increases in their requirements.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

KANSAS-NEBRASKA NATURAL GAS COMPANY, INC., DOCKET NO. CP66-133

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued December 20, 1965)

On October 27, 1965, Kansas-Nebraska Natural Gas Company, Inc. (Applicant) filed in Docket No. CP66-133 an application pursuant to Section 7(c) of the Natural Gas Act, as implemented by Section 157.7(c) of the Regulations under the Act, for a certificate of public convenience and necessity authorizing the construction during the calendar year 1966 and the operation of gas-sales

or transportation facilities, all as more fully set forth in the application in this proceeding.

Applicant proposes to construct a maximum of 12 lateral lines of up to 6⅝-inch diameter pipe with the maximum length being 10 miles and a maximum of 12 taps and meters in order to transport and sell natural gas previously authorized under certificates for transportation or sale to existing distributors at rates on file with the Commission, for resale in existing market areas, and in order to sell natural gas to direct consumers located in areas outside the franchise area of any local distributor. Applicant also proposes to construct facilities necessary for a maximum of 4 miscellaneous rearrangements not resulting in any change of service rendered by means of the facilities involved.

The total cost of facilities proposed under this application will not exceed a maximum of $300,000 and the total deliveries to any one consumer will not exceed a maximum of 100,000 Mcf of natural gas per year. Such cost of proposed facilities will be financed from current working capital.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on December 16, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Kansas-Nebraska Natural Gas Company, Inc., a Kansas corporation having its principal place of business in Phillipsburg, Phillips County, Kansas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of April 6, 1943, in Docket No. G–259 (3 FPC 966).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation and/or sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the proposed transportation and/or sales of natural gas by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(6) The authorization hereinafter granted should be limited to construction during the calendar year 1966 and the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $300,000, with the total deliveries to any one customer not to exceed a maximum of 100,000 Mcf of natural gas per year.

(7) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit within 60 days after the ex-

piration of the authorization granted hereinafter, a statement in compliance with Section 157.7(c)(8) of the Commission's Regulations under the Natural Gas Act.

(8) The certificate issued hereinafter should be conditioned upon Applicant's compliance with the provisions of Section 157.7(c)(7) of the aforesaid Regulations.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity is issued authorizing Applicant, Kansas-Nebraska Natural Gas Company, Inc., to construct during the calendar year 1966 and operate the proposed facilities for the sale of natural gas to direct customers and to distributors for resale and for miscellaneous rearrangements as hereinbefore described, as more fully described in the application in this proceeding, and as hereinafter provided.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(C) The authorization granted in paragraph (A) above is limited to construction during the calendar year 1966 and the total expenditures for facilities to be constructed thereunder are limited to a maximum of $300,000, with the total deliveries to any one customer limited to a maximum of 100,000 Mcf of natural gas per year.

(D) Applicant shall submit within 60 days after the expiration of the authorization granted by paragraph (A) above a statement in compliance with Section 157.7(c)(8) of the Commission's Regulations under the Natural Gas Act.

(E) The certificate issued by paragraph (A) above is expressly conditioned upon Applicant's compliance with the provisions of Section 157.7(c)(7) of the aforesaid Regulations, and, further, the certificate is granted upon the express condition that any interruptible service resulting herefrom shall be curtailed or interrupted to the extent required to meet existing or future contracted maximum delivery obligations of Applicant for firm service to its customers.

(F) This certificate shall not entitle any industrial customers to whom firm deliveries are authorized herein to any priorities or rights to additional gas for meeting any future increases in their requirements at the expense of resale customers desiring to acquire additional gas to meet any future increases in their requirements.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

MISSOURI EDISON COMPANY AND PANHANDLE EASTERN PIPE LINE COMPANY, DOCKET NO. CP66-69

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued December 20, 1965)

On September 7, 1965, Missouri Edison Company (Applicant) filed an application, as amended on September 27, 1965, and supplemented on October 11,

1965, and November 17, 1965, pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Panhandle Eastern Pipe Line Company (Respondent) to make a physical connection of its facilities with the facilities to be constructed by Applicant and to sell and deliver to Applicant up to an additional 4,095 Mcf of natural gas per day, as more fully set forth in the application.

Applicant proposes to construct and operate approximately 133 miles of lateral transmission pipelines and distribution systems to render natural gas service to 16 communities and rural areas in northeast Missouri. Fifteen of these communities will be served from the proposed tap on Respondent's main line. The remaining community, Clarksville, will be served through an extension from Applicant's existing delivery point for Louisiana, Missouri. The distribution system for the town of Louisiana, Missouri, is owned and operated by Applicant and is adjacent to the proposed new service area.

The total estimated cost of the facilities to be constructed by Applicant is $3,098,570, which will be financed initially from treasury funds and the proceeds from unsecured short term bank loans. Applicant will then refund the bank loans by the sale of stock, mortgage bonds or other form of permanent financing, subject to the approval of the Public Service Commission of Missouri.

The communities which will be served by Applicant and the third year annual and peak day volumes of natural gas estimated to be required by each community are as follows:

Community	Third year (Mcf)	
	Annual	Peak day
Bellflower	10,124	94
Clarksville	21,137	204
Curryville	9,723	85
Elsberry	43,254	413
Foley	6,034	54
Hawk Point	8,270	75
High Hill	6,034	54
Jonesburg	12,140	116
Moscow Mills	10,940	103
Old Monroe	10,287	96
Troy	50,414	488
Truesdale	6,906	62
Warrenton	57,067	540
Wentzville	97,741	938
Winfield	17,047	164
Wright City	23,480	227
Rural	37,559	382
	428,157	4,095

The gas will be purchased by Applicant under Respondent's G-2 Rate Schedule.

Applicant was granted a certificate of public convenience and necessity effective on July 13, 1965, by the Public Service Commission of Missouri.

By letter of September 8, 1965, Respondent was notified of the filing of the application and furnished a copy thereof. No answer has been received from Respondent.

Due notice of the filing of the application was published in the Federal Register on September 21, 1965 (30 F.R. 12053). No protest, petition to intervene or notice of intervention has been filed.

The Commission finds:

(1) Panhandle Eastern Pipe Line Company, a Delaware corporation having its principal place of business in Kansas City, Missouri, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of September 23, 1942, in Docket Nos. G–200 and G–207 (3 FPC 273).

(2) Applicant is a public utility company in the State of Missouri and is authorized to construct and operate facilities to distribute and sell natural gas to inhabitants of the communities along its system.

(3) It is necessary and desirable in the public interest that Respondent be directed to establish a physical connection of its transportation facilities with the facilities proposed to be constructed by Applicant and to sell and deliver up to an additional 4,095 Mcf of natural gas per day to Applicant, as hereinbefore described and as more fully set forth in the application, as hereinafter ordered and conditioned.

(4) The requirement that Respondent serve Applicant, as requested, will not place an undue burden upon Respondent nor impair its ability to render adequate service to existing customers.

The Commission orders:

(A) Respondent is directed to establish a physical connection of its natural gas transmission system with the facilities to be constructed by Applicant and to sell and deliver up to an additional 4,095 Mcf of natural gas per day to Applicant, all as hereinbefore described and as more fully described in the application.

(B) Applicant shall be prepared to receive natural gas from Respondent at the proposed new connection within one year from the date of this order.

(C) Respondent shall notify the Commission of the commencement of service within 10 days thereof.

(D) Respondent shall execute and file with the Commission a superseding service agreement with Applicant in accordance with the Commission's Regulations under the Natural Gas Act.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

NATURAL GAS PIPELINE COMPANY OF AMERICA, DOCKET NO. RP65–50

ORDER APPROVING PROPOSAL FOR RATE REDUCTIONS AND REFUNDS

(Issued December 20, 1965)

Natural Gas Pipeline Company of America (Natural), filed with the Commission on September 29, 1965, a proposed agreement with regard to its rates for sales of natural gas for resale. Among other things, the agreement provides for a reduction in the company's revenues of approximately $3,500,000 annually,[1] effective January 1, 1965. Natural proposes to file tariff sheets reducing the demand component of its two-part rates by 13 cents and its straight-line rates by .85 cents, if the agreement is approved.[2]

[1] Based on estimated billing units for 1966.

[2] See Appendix A.

This agreement is the result of numerous conferences between Natural and the Commission staff. Informal review of Natural's earnings was initiated on December 15, 1964, by a letter to Natural from the Chief of the Commission's Bureau of Natural Gas. Conferences were held between Natural and the Commission staff, and on April 2, 1965, the Commission in the above-entitled docket instituted an investigation of Natural's rates under Section 5(a) of the Natural Gas Act. In addition, the order of April 2, 1965, 33 FPC 666, required Natural to submit certain cost and revenue data. Natural's appeal from this filing requirement of the Commission's order is currently pending before the United States Court of Appeals for the Seventh Circuit.

Natural's proposed agreement provides for the methods of computing the jurisdictional portion of gas purchases and supplier refunds, the allocation of refunds according to proportionate contract demands, the filing of reports, the necessity of the Commission's accepting without suspension the tariff sheets to be filed, waiver of notice, the privileged nature of the agreement if not accepted unconditionally, and the stipulation that the agreement is a dollar settlement only. In addition to the foregoing provisions, Natural's proposal contains the following terms:

(1) Natural will reduce its rates by $3,500,000 annually by filing tariff sheets containing the rates shown in Appendix A, to be effective January 1, 1965, and will make refunds reflecting the retroactive effectiveness of the rate reduction within 45 days after Commission approval of the statement becomes final.

(2) (a) Obligations relating to a "consolidated effective tax rate" will remain effective as provided in previous settlements, opinions and orders with respect to the period prior to January 1, 1965. The corporate system of which Natural is a member contained no loss companies as of January 1, 1965.

(2) (b) As a result of the proposed rate reduction, Natural's rates will cease to include any amounts with respect to the invalidated Texas Dedicated Reserve Gas Tax as of January 1, 1965. Natural will refund the additional amount of $527,018, which was collected to reflect this item prior to that date, when it makes the refund described in paragraph (1) above.

(3) Natural's obligations arising out of prior settlements and orders with respect to supplier refunds and rate reductions shall continue with respect to the period prior to January 1, 1965, only. Natural will flow-through to its customers all supplier refunds attributable to gas purchased during 1965. Natural will conduct a post-audit of its purchased gas costs for 1966, and will make refunds to its customers to the extent its actual purchased gas costs during 1966 are less than 15.82 cents per Mcf. Supplier refunds attributable to 1966 received after 1966 will be subject to flow-through to the extent Natural's purchased gas costs during 1966 are less than 15.82 cents per Mcf. Refunds attributable to 1965 and 1966 purchased gas will be made semi-annually, if a specified minimum has accumulated, but no less than annually.

(4) Natural agrees to continue the use of liberalized depreciation for tax purposes until it has obtained a determination by the Commission, by Declaratory Order or otherwise, that Natural will not have to reflect liberalized depreciation in its rates if it elects to use straight-line depreciation for tax purposes. If Opinion Nos. 456 and 456-A, 33 FPC 574, 1277, are finally affirmed, Natural's obligations regarding liberalized depreciation will be determined in accordance with the terms of those opinions for the period from February 3, 1964 to January 1, 1965, and in accordance with the procedure described below for the period from and after January 1, 1965. If Opinion Nos. 456 and 456-A are finally affirmed, Natural wants to return to the use of straight-

line depreciation for tax purposes, if the Commission decides that such an election will be effective for rate-making purposes; but as long as Natural continues to use liberalized depreciation for tax purposes, the benefits of liberalized depreciation will be flowed-through to its customers by refunds or rate reductions. If the Commission enters an order requiring Natural to reflect liberalized depreciation in its rates if it uses straight-line depreciation for tax purposes, and that order is finally affirmed, Natural will reduce its rates to reflect the tax effect of the excess of liberalized depreciation over straight-line depreciation for the year immediately preceding the year in which the Commission's order becomes final, unless Natural can demonstrate that such a reduction would produce a level of revenue conducive to a rate increase filing. Until that rate reduction is made, Natural is obligated to make refunds reflecting liberalized depreciation for each year in which it uses liberalized depreciation for tax purposes. If the Commission enters an order, which becomes final, allowing Natural to reflect straight-line depreciation in its rates if it elects to use straight-line depreciation for tax purposes, Natural will continue to be obligated to make refunds for all years in which it uses liberalized depreciation for tax purposes, even though the obligation to reduce its rates will be terminated. These refunds will be made when Opinion Nos. 456 and 456–A are finally affirmed, for the period prior to that time, and annually thereafter until Natural either reduces its rates or elects to use straight-line depreciation for tax purposes, depending on the outcome of the Declaratory Order proceeding described above. If that aspect of Opinion Nos. 456 and 456–A requiring the deduction of deferred tax balances from the rate base is finally affirmed on appeal, Natural will make refunds and rate reductions to reflect that principle. There are other provisions in Article V of the agreement specifying the periods for which Natural shall be obligated to make refunds and rate reductions if the policies of Opinion Nos. 456 and 456–A are affirmed but some date other than February 3, 1964, is determined to be the date when the Commission could apply those policies to Natural, or if those policies or a policy of requiring Natural to reflect liberalized depreciation in its rates if its uses straight-line depreciation for tax purposes are reversed by the Commission or Congress. All amounts refunded pursuant to the terms of Article V will bear interest at seven percent per annum from the 20th day of the month in which payment was due to Natural until the date of refund.

(5) The agreement is contingent on the Commission's terminating the proceeding in Docket No. RP65-50 and relieving Natural of all obligations therein; Natural agrees to dismiss its appeal from Commission orders in that proceeding which is now pending before the Court of Appeals for the Seventh Circuit. Additional contingencies are approval by the Commission of the agreement's terms without modification and acceptance of the proposed tariff sheets without suspension.

(6) Natural's obligation under the agreement will terminate when new rates, (other than those required to be filed pursuant to the agreement) become effective.

The Public Service Commission of Wisconsin and the City of Chicago have filed comments on Natural's statement, as provided for in the "Notice of Proposed Settlement", issued October 5, 1965. Neither of these parties makes objection to Natural's proposals, although they state that they are unable to evaluate the amount of the proposed rate reduction and the terms of the agreement.

The Commission finds:

(1) Good cause exists for waiving the requirements of Section 154 of the Commission's Regulations under the Natural Gas Act in order that the proposed rates shown in the attached Appendix A may become effective on January 1, 1965, as hereinafter ordered.

(2) The proposed reduced rates and Natural's agreement to make refunds and further reduce its rates as provided in the statement filed September 29, 1965, are proper and in the public interest in carrying out the provisions of the Natural Gas Act and should be accepted for filing and made effective as hereinafter provided and ordered.

The Commission orders:

(A) The provisions of Section 154 of the Commission's Regulations under the Natural Gas Act are waived to the extent necessary to make the tariff sheets to be filed effective as of the date hereinafter specified, subject to the terms of this order.

(B) Natural's proposal filed September 29, 1965, to file tariff sheets containing the proposed rates shown in the attached Appendix A; to make purchased gas refunds to its customers; and to make refunds and rate reductions pertaining to liberalized depreciation subject to specified contingencies, is approved and made effective as specified herein subject to the terms of this order.

(C) Natural shall file within 10 days following the date of issuance of this order, revised tariff sheets acceptable to the Commission, containing the proposed rates shown in Appendix A. Upon the filing by Natural of such sheets and acceptance thereof, evidenced by a letter addressed to Natural by the Secretary of the Commission, such tariff sheets shall be effective as of January 1, 1965.

(D) Natural shall comply fully with each of the obligations it has assumed in the proposal embodied in its statement filed September 29, 1965, and shall comply with each of the provisions of this order. Subject to Natural's compliance with the terms of its agreement and of this order, the informal review of Natural's earnings initiated by the letter of December 15, 1964, and the proceeding in this Docket No. RP65-50 are terminated and Natural is relieved of obligations therein.

(E) This order is without prejudice to any filings or orders which have been made or may hereafter be made by the Commission and is without prejudice to any claims or contentions which may be made by the Commission, Natural, the Commission staff, or any other party affected by this order, in any proceeding now pending or hereafter instituted by or against Natural or any other persons or parties affected by this order.

POWER SYSTEM STATEMENTS—MISCELLANEOUS AMENDMENTS TO F.P.C. FORMS NOS. 12, 12-A, 12-D, DOCKET NO. R-289

ORDER NO. 312

AMENDING REPORT FORMS NOS. 12, 12-A AND 12-D

(Issued December 20, 1965)*

The Commission is here amending F.P.C. Forms Nos. 12, 12-A and 12-D, Power System Statements, prescribed in §§ 141.51, 141.52 and 141.55, respectively, of its regulations and required to be filed by electric utilities, licensees and others engaged in the generation, transmission or distribution of electric energy. On October 28, 1965, we issued a notice of proposed rulemaking (30 F.R. 10418, November 5, 1965) in which the amendments were described in detail. We also stated that the amendments, for the most part suggested by representatives of the companies and other entities which make the reports reduce the present reporting requirements but, in addition, provide new schedules for the reporting of information relating to the operation of pumped storage facilities by the few hydroelectric licensees which have such facilities. Only a minor editorial change, which we have adopted, was suggested by the single response submitted pursuant to the notice. Accordingly, the amendments here prescribed are the same as those proposed in the notice and the following table lists the schedules affected in the several forms:

Schedule Heading	Page Number	
	New	Old
F.P.C. FORM NO. 12		
General Information	3	3
Capacity and Output, etc.	4	4
Do.	5	5
System Hydroelectric Data	8	8
Plant Data—Small Plants	9	9
Do.	10	10
Hydroelectric Plant Data	11	11
Do.	12	12
Pumped Storage Plant Data	13	----
Do.	14	----
Steam Electric, etc., Plant Data	15	13
Internal Combustion, etc., Plant Data	17	15
F.P.C. FORM NO. 12-A		
General Information	2	2
General Instructions	5	5
F.P.C. FORM NO. 12-D		
General Information	1	1

The Commission finds:

The amendments to the several report forms here prescribed are necessary and appropriate for the administration of the Federal Power Act.

The Commission, acting pursuant to the provisions of the Federal Power Act, as amended, particularly sections 4(a), (b), (c), 301(a), 302, 304, 309, and

*Published in the Federal Register on December 28, 1965 (30 F.R. 16106).

311 thereof (49 Stat. 839, 854, 855, 858, 859; 16 U.S.C. 797(a), (b), (c), 825(a), 825a(a), 825c, 825h, 825j), *orders:*

(A) F.P.C. Form No. 12, Power System Statements, for Classes I and II systems, prescribed by § 141.51(a), Subchapter D, Chapter I, Title 18 of the Code of Federal Regulations, is amended by adding a new schedule (4–A Pumped Storage Plant Data) and amending the General Information page and schedules 1, 3, 4, 5 and 7 to read as set out in the several schedule pages of the form appended hereto in *Attachment A.**

(B) F.P.C. Form No. 12–A, Power System Statements, for Classes III, IV and V systems, prescribed by § 141.52 of the said regulations, is amended by amending the General Information and General Instructions pages to read as set out in the two pages of the form appended hereto in *Attachment B.**

(C) F.P.C. Form No. 12–D, Power System Statements for certain Class III systems, prescribed by § 141.55 of the said regulations, is amended by amending the General Information page to read as set out in *Attachment C,** appended hereto. [Secs. 4(a), (b), (c), 301(a), 302, 304, 309, 311, (49 Stat. 839, 854, 855, 858, 859; 16 U.S.C. 797(a), (b), (c), 825(a), 825a(a), 825c, 825h, 825j)]

(D) The amendments prescribed herein shall be effective for the reporting year 1965 and thereafter.

(E) The Secretary shall cause prompt publication of this order to be made in the Federal Register.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

SOUTH CAROLINA NATURAL GAS COMPANY, DOCKET NO. RP66–11

DECLARATORY ORDER DETERMINING CONTRACTUAL OBLIGATIONS WITH RESPECT TO DELIVERY PRESSURES

(Issued December 20, 1965)

South Carolina Natural Gas Company (South Carolina), on September 15, 1965, filed a petition pursuant to Section 1.7(c) of the Commission's Rules of Practice and Procedure, requesting a declaratory order determining the question of the proper pressure at which overrun gas must be made available to South Carolina by Southern Natural Gas Company at the latter's Aiken delivery point.

South Carolina contends that the terms of its service agreement with Southern Natural and the provisions of the latter's tariff clearly provide for delivery pressure of 400 psig at Aiken, without any specification of the type of gas delivered. Thus South Carolina claims that a delivery pressure of 400 psig must continuously be maintained at the Aiken delivery point regardless of the daily quantity of gas it purchases at that delivery point. It further argues that based on those contract and tariff provisions, there is no justification for Southern Natural's attempt to limit this pressure requirement only to contract demand gas. In addition to its contention regarding the proper interpretation of the contract and tariff provisions, South Carolina also states that unless the pressure question can be resolved satisfactorily, it will be forced to

*Omitted in printing.

install additional compressor facilities at great expense in order to receive its "historical share of overrun gas at Aiken."

Southern Natural filed its answer to the petition on September 30, 1965, urging the Commission to find that pursuant to the terms of its tariff and its service agreement with South Carolina, it does not have any obligation to maintain the 400 psig contract delivery pressure at Aiken on days when South Carolina purchases gas at that delivery point in excess of the contract demand for that delivery point.

On October 22, 1965, Carolina Pipeline Company, which also purchases gas from Southern Natural at Aiken, filed a petition to intervene coupled with a request that the proceeding be set down for formal hearing. Carolina alleges that if Southern is required to maintain a delivery pressure of 400 psig at Aiken, it would affect adversely Southern Natural's ability to deliver the full capacity of its pipeline and would have a substantial adverse affect upon Southern Natural's ability to make deliveries to Carolina.

The effective service agreement between South Carolina and Southern Natural provides in part as follows:

> Purchaser agrees to take and purchase from Company, and Company agrees to sell and deliver to Purchaser quantities of gas up to the contract demands at the delivery point and at the delivery pressure specified in Exhibit A hereto * * *.

Exhibit A to that service agreement specifically provides for a contract demand of 70,650 Mcf at the Aiken delivery point at a delivery pressure of 400 psig. Section 3 of the General Terms and Conditions of Southern Natural's tariff states in part:

> Gas will be delivered at each delivery point at such pressure as may be mutually agreed upon and specified in the contract. Each pressure to be so specified, shall be such pressure as purchaser may request up to the pressure which, in the opinion of the company, can be continuously maintained, without reducing the existing or future deliverability, or impairing the efficient operation, of its system or any part thereof.

The facts indicate that Southern Natural has executed service agreements with each of its customers, including South Carolina, to deliver volumes of gas up to the specified contract demands, but it does not have service agreements or contracts for overrun service with any of its customers. Clearly, Southern Natural is not obligated to deliver daily quantities in excess of specified contracts, although when such excess gas is available it is obligated to apportion it equitably among all its customers.

Southern Natural in its answer admits that the pressures at Aiken have dropped below 400 psig, but only on days when quantities of gas considerably in excess of contract demand were being delivered to South Carolina and Carolina Pipeline at that delivery point. Southern Natural further states that it would be impossible, within reasonable economic limitations, to design a pipeline system which could assure maintenance of specified delivery pressures at specified delivery points without regard to the daily quantities of gas to be delivered.

After analysis of the pleadings filed and the related documents and data on file with the Commission, it is our view that South Carolina's claim for delivery pressure to be maintained at Aiken is not supported by the provisions of Southern Natural's tariff or by the contractual provisions of the service agreement between South Carolina and Southern Natural. On the contrary, we find that Southern Natural is not contractually obligated to maintain a

400 psig delivery pressure at its Aiken delivery point for South Carolina on days when South Carolina is purchasing volumes of gas at Aiken in excess of its contract demand for that delivery point.[1]

The Commission determines:

Southern Natural is not obligated under its tariff or under its service agreement with South Carolina to maintain a 400 psig delivery pressure at Aiken delivery point to South Carolina on days when South Carolina is purchasing overrun gas (*i.e.*, gas in excess of its Contract Demand entitlement) at that delivery point.

[1] Southern Natural began operating its new Hall Gate Compressor Station (CP64–314) on November 4, 1965. It is anticipated that the operation of that station will improve deliveries and pressures at Aiken.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

SUN OIL COMPANY, DOCKET NO. RI66-198

ORDER GRANTING MOTION FOR RECONSIDERATION, ACCEPTING CONDITIONALLY NOTICE OF CHANGE FOR FILING AND PROVIDING FOR HEARING ON AND SUSPENSION OF PROPOSED CHANGE IN RATE

(Issued December 20, 1965)

Sun Oil Company (Sun) filed a motion for reconsideration on November 23, 1965, of the Commission's undocketed order issued August 25, 1965, rejecting a proposed rate increase from 16.0¢ to 20.5¢ per Mcf for sales of gas under its FPC Gas Rate Schedule No. 124 to Transwestern Pipeline Company from Kermit Field, Winkler County, Texas.[1] In its letter-order the Commission refused to waive the condition in Sun's temporary certificate issued November 3, 1960, in Docket No. CI61-372 which prohibits the filing of any rate increase above the authorized initial rate of 16¢ per Mcf for sales under Sun's FPC Gas Rate Schedule No. 124. Waiver was not granted because the rate proposed by Sun was in excess of the applicable just and reasonable rate ceiling determined in Opinion No. 468 for sales in the Permian Basin where Sun's sale is made. Sun's application for rehearing of the August 25 order was denied by order issued October 21, 1965, 34 FPC 1180.

On October 20, 1965, subsequent to the issuance of our rejection order, the Tenth Circuit in *Skelly Oil Co.* v. *F.P.C.* (CA–10 No. 8385, *et al.*) stayed through January 20, 1966, the effectiveness of Opinion Nos. 468 and 468–A, 34 FPC 159, 1068, as to Skelly, Phillips and Warren. The Court's order further provided that any member of the Court may grant a similar stay if other petitions for review are filed in or transferred to that Court. Argument was also set for January 7, 1966, on the question of further stay. Sun was granted a court stay by order issued November 9, 1965.

Under the circumstances, it is appropriate to grant Sun's motion for reconsideration, conditionally accept for filing, and simultaneously suspend the rate increase filed on July 30, 1965, for a period of five months from the date it otherwise would have become effective had it not been rejected. Our acceptance of the instant rate increase is expressly conditioned to provide that

[1] The proposed increased rate filed on July 30, 1965 is designated herein as Supplement No. 3 to Sun's FPC Gas Rate Schedule No. 124. Details of the proposed increase are set forth in Appendix "A" hereof.

the rate increase will be rejected, *ab initio*, in the event the court stay referred to above is dissolved or Opinion Nos. 468 and 468–A are upheld upon judicial review.

The proposed changed rate and charge may be unjust, unreasonable, unduly discriminatory, or preferential, or otherwise unlawful.

The Commission finds:

It is necessary and proper in the public interest and to aid in the enforcement of the provisions of the Natural Gas Act that the Commission enter upon a hearing concerning the lawfulness of the proposed change, and that Supplement No. 3 to Sun's FPC Gas Rate Schedule No. 124 be suspended and the use thereof deferred as hereinafter ordered.

The Commission orders:

(A) Pursuant to the authority of the Natural Gas Act, particularly Sections 4 and 15 thereof, the Commission's Rules of Practice and Procedure, and the Regulations under the Natural Gas Act [18 CFR, Chapter I], a public hearing shall be held upon a date to be fixed by notice from the Secretary concerning the lawfulness of the proposed increased rate and charge contained in Supplement No. 3 to Sun's FPC Gas Rate Schedule No. 124.

(B) Pending such hearing and decision thereon, Supplement No. 3 to Sun's FPC Gas Rate Schedule No. 124 is conditionally accepted for filing, as noted above, and is hereby suspended and the use thereof deferred until February 1, 1966, and thereafter until such further time as it is made effective in the manner prescribed by the Natural Gas Act.

(C) Neither the supplement hereby suspended, nor the rate schedule sought to be altered thereby, shall be changed until this proceeding has been disposed of or until the period of suspension has expired, unless otherwise ordered by the Commission.

(D) Notices of intervention or petitions to intervene may be filed with the Federal Power Commission, Washington, D. C., 20426, in accordance with the Rules of Practice and Procedure [18 CFR 1.8 and 1.37(f)] on or before February 2, 1966.

UNION OIL COMPANY OF CALIFORNIA, DOCKET NO. CI65-683

ORDER DENYING MOTION FOR RECONSIDERATION

(Issued December 20, 1965)

On November 22, 1965, Union Oil Company of California (Union) filed a motion for reconsideration of certain of the conditions attached to the temporary certificate issued to Union in the above-captioned proceeding by the Commission's letter, dated November 4, 1965, permitting Union to sell gas in interstate commerce as proposed in the application for certificate.

The conditions to which Union has referred are as follows:

(1) The initial rate shall be that provided in the rate schedule accompanying the certificate application or the applicable area rate determined pursuant to the Commission's Opinion No. 468, as modified by Opinion No. 468–A, 34 FPC 159, 1068, whichever is lower.

(2) No increase in rate may be filed prior to January 1, 1968, except in compliance with a specific order of the Commission, for a rate in excess of the applicable area rate as determined pursuant to the Commission's Opinion No. 468, as modified by Opinion No. 468–A, or pursuant to later order of the Commission.

(3) The filing, within 90 days from the date of initial delivery, of a Rate Schedule-Quality Statement as set forth in the Commission's Opinion No. 468, as modified by Opinion No. 468–A.

(4) If the quality of the gas delivered hereunder at any time deviates from the quality standards set forth in Ordering Paragraph (B) of Opinion No. 468–A so as to require a downward adjustment to the existing rate, a notice of change in rate must be filed pursuant to the provisions of Section 4 of the Natural Gas Act; *provided, however,* that adjustments reflecting changes in Btu content shall be computed by the applicable formula and charged without the filing of a notice of change in rate.

Union moves that, in view of the Order issued by the United States Court of Appeals for the Tenth Circuit on November 5, 1965, staying Opinion Nos. 468 and 468–A to and including January 20, 1966, and enjoining and restraining this Commission from enforcing, causing to be enforced, or attempting to enforce said Opinions against Union, the Commission modify the temporary certificate issued to Union in Docket No. CI65–683 by deleting therefrom the conditions referred to, *supra.*

Union's arguments are unconvincing. Of course, with respect to Union's existing sales in issue in the Permian proceeding, the Court's action in granting a temporary stay of Opinion Nos. 468 and 468–A is binding upon us. This, however, has nothing to do with the public interest question presented by a new application under Section 7 of the Act. The Court's temporary stay of our orders in the Permian proceeding provides no basis for changing our conclusion that the public interest requires that sales conform to the just and reasonable standards for the future in Opinion Nos. 468 and 468–A, nor has Union adduced any information which would lead us to shift our position. As we indicated in the Permian Opinion, Union will, of course, have an opportunity at the hearing of its application to show why some higher price is warranted. But in the meantime, if it wishes to operate on an emergency

temporary certificate prior to the time when all interested parties can have their opportunity to state their case, it must do so pursuant to the reasonable conditions we have imposed.

The Commission finds:

The reasons advanced as grounds for reconsideration in Union's motion present no facts or legal principles which would warrant any change or modification in the Commission's letter of November 4, 1965, in Docket No. CI65-683.

The Commission orders:

The above-described motion for reconsideration of the Commission's letter of November 4, 1965, is denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

UNITED GAS PIPE LINE COMPANY, DOCKET NO. CP63-62

ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued December 20, 1965)

On November 5, 1965, United Gas Pipe Line Company (Petitioner) filed in Docket No. CP63-62 a petition to amend the order dated June 21, 1963 (29 FPC 1252) issuing a certificate in said docket by authorizing an increased daily sale and delivery of natural gas to the Town of Beaumont, Perry County, Mississippi, for resale, all as more fully set forth in the petition.

Petitioner has heretofore been authorized to sell and deliver up to 344 Mcf of natural gas per day to the Town of Beaumont and now requests authorization to sell and deliver up to 1,900 Mcf of natural gas per day. The additional gas will be resold by the Town of Beaumont to a plywood mill being constructed there.

The estimated annual and peak day requirements for the Town of Beaumont in Mcf at 14.9 psia for the first three years of increased deliveries are as follows:

Year	Annual	Peak day
1	299,700	1,544
2	349,667	1,578
3	351,867	1,900

Petitioner proposes to replace the meter, regulator and appurtenant equipment used to serve the Town of Beaumont with equipment of greater capacity to accommodate the increased deliveries. The estimated net cost of said facilities is $1,592, to be financed with funds on hand.

After due notice no petition to intervene, notice of intervention or protest to the granting of the petition has been received.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the order issuing a certificate of public convenience and necessity in Docket No. CP63-62 should be amended as hereinafter ordered.

The Commission orders:

The order issuing a certificate of public convenience and necessity to Petitioner in Docket No. CP63–62 is amended by authorizing the sale and delivery of up to 1,900 Mcf of natural gas per day to the Town of Beaumont, Mississippi, and the construction and operation of facilities necessary therefor. In all other respects said order shall remain in full force and effect.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

BRAZOS RIVER AUTHORITY, PROJECT NOS. 1490 AND 2472

ORDER PERMITTING WITHDRAWAL OF APPLICATION FOR PROJECT NO. 2472 AND AMENDING LICENSE (MAJOR) FOR PROJECT NO. 1490

(Issued December 22, 1965)

On March 19, 1965, the Brazos River Authority, Licensee of Project No. 1490 and Applicant for Project No. 2472, filed a notice of withdrawal of license application for Project No. 2472 which had been filed on May 4, 1964. The Authority, on March 19, 1965, also filed an application for amendment of its license for Project No. 1490, (Morris Sheppard) located on the Brazos River in Palo Pinto, Young and Stephen Counties, Texas. On October 21, 1965 the Authority filed a revised Exhibit B to the application for amendment.

Public notice of the notice of withdrawal of application in Project No. 2472 and application for amendment of the license for Project No. 1490 was issued April 14, 1965. No protests or petitions to intervene were received.

Project No. 2472 for which the Authority now seeks to withdraw its application would have been comprised of the existing Project No. 1490 and a proposed DeCordova Bend development downstream on the Brazos River in Hood and Parker Counties, Texas. The Authority asserts that the withdrawal of its application is necessary because it has been unable to complete arrangements for the sale of power which would have made it possible to finance the construction of the DeCordova Bend hydroelectric development. Under the circumstances, the Commission will permit the withdrawal of the application for license for Project No. 2472.

Licensee in its application for amendment of license for Project No. 1490, in substance, seeks Commission authority to permit the use of the Morris Sheppard Reservoir as a source of cooling water for steam-electric generating plants which certain utility companies intend to construct and operate on lands adjacent to the Morris Sheppard Reservoir. Licensee states that in return for such use, and the use of the proposed DeCordova Bend Reservoir for similar purposes, the companies will finance the construction of the DeCordova Bend Dam and Reservoir which will not include hydroelectric facilities. In the event that hydroelectric facilities are installed at a later date, this installation would not require modification of the DeCordova Bend Dam.

Specifically, Licensee requests the following:

(1) Approval of an easement (Exhibit B, as revised October 18, 1965) to be granted by Licensee to the Texas Electric Service Company and its successors and assigns (Companies) for the use of certain lands within the project boundary of Project No. 1490 for the construction, operation, and maintenance

of steam-electric generating facilities, reserving the right to the Licensee, its successors and assigns to use such lands for project purposes of Project No. 1490;

(2) Approval of a revised Exhibit K (FPC No. 1490–69) designating certain areas within the project boundary of Project No. 1490 which are to be the subject of the aforesaid easement; and

(3) Approval of the use of Morris Sheppard Reservoir as a source of cooling water for steam-electric generating plants to be constructed and operated by companies.

The easement (Exhibit B) which Licensee proposes to grant to Companies would change its interest in certain lands within Project No. 1490, shown in revised Exhibit K (FPC No. 1490–69), while reserving the right to Licensee, its successors and assigns to use the lands for project purposes. Since it appears that the proposed change in Licensee's interest in these project lands will not affect adversely the operation of Project No. 1490, we shall grant Licensee's request for approval of the easement. We shall likewise approve the revised Exhibit K (FPC No. 1490–69) showing the location of project lands affected by the easement.

With respect to Licensee's request for approval of the Companies' proposed use of the Morris Sheppard Reservoir, it appears that such use would not be inconsistent with project purposes as provided in the license. We shall authorize Licensee to permit the proposed use of the Morris Sheppard Reservoir, with the proviso that such operation shall not affect injuriously the operation of Project No. 1490.

In addition, Licensee seeks an amendment of its license adding a condition which would authorize the use of the Morris Sheppard Reservoir as a source of cooling water for Companies' steam-electric generating plants for the duration of the easement. The terms of the easement provide that it shall remain in effect until the purposes for which it is granted "shall have been abandoned". Under those terms, the proposed use of the Morris Sheppard Reservoir might well extend beyond the term of the license for Project No. 1490 which expires in 1988. As we stated in an order amending license for Project No. 405[1] in which we refused to provide conditions which would have extended beyond the term of the license, "it is fundamental that the terms and conditions of a license may not extend for a period beyond the expiration of its term".

While some similarity may exist between the use of the Morris Sheppard Reservoir proposed herein and the use of the Conowingo Reservoir provided for in Project No. 2355 (Muddy Run),[2] the extent of the Commission's licensing authority in each case is not the same. In the case of Muddy Run the Commission was exercising its licensing authority, pursuant to Sections 4(e) and 10(a) of the Federal Power Act in the interest of comprehensive development of the Susquehanna River, when it authorized the Muddy Run Pumped Storage Development and the use of the Conowingo Reservoir for the period of the license for Project No. 2355 which extended beyond the term of the license for Project No. 405. However, this exercise of authority does not obtain with respect to the proposed steam-electric generating facilities.

Licensee has not expressly requested the Commission to authorize the con-

---

[1] The Susquehanna Power Company and Philadelphia Electric Power Company, Project No. 405, order issued August 16, 1965, 34 FPC 517.

[2] See Commission Opinion No. 443, issued September 21, 1964, 32 FPC 826.

struction and operation of the Companies' steam-electric generating plants, but, lest our action herein be interpreted as authorizing such construction or operation, we wish to make clear, consistent with the decision of the Supreme Court in the *Taum Sauk case*[3], that the Commission is not empowered to license steam-electric generating facilities and that we have not undertaken to do so herein.

The Texas Park & Wildlife Department has made certain suggestions with respect to fish protective devices. We shall provide for appropriate fish protective devices for Project No. 1490 by the addition of a pertinent license article.

The Department of the Interior in its report upon the application for amendment recommends that the license for Project No. 1490, as amended, include appropriate Form–L standard articles relating to fish, wildlife and recreation resources. We believe that it is in the public interest to protect fish, wildlife and recreation resources from any detrimental effects which may result from the use of project waters as herein authorized. Accordingly, we shall order the addition of appropriate articles dealing with these matters.

The Commission finds:

(1) It is appropriate to permit the withdrawal of the application for license for Project No. 2472.

(2) It is consistent with the public interest that the license for Project No. 1490 be amended as herein provided.

(3) The revised Exhibit K (FPC No. 1490–69) conforms to the Commission's rules and regulations and should be approved as part of the license for Project No. 1490; Exhibit K (FPC No. 1490–60) now part of the license and which will be superseded, should be eliminated from the license.

The Commission orders:

(A) Permission for withdrawal of the application for license for Project No. 2472 is hereby granted.

(B) The aforesaid request by Brazos River Authority for an amendment of the license for Project No. 1490 for the duration of the easement, which may extend beyond the term of the license, is hereby denied.

(C) Exhibit K (FPC No. 1490–60) of the license for the Project No. 1490, to be superseded by a revised Exhibit K (FPC No. 1490–69) hereinafter ordered approved, is hereby eliminated from the license.

(D) The license for Project No. 1490 is hereby amended by adding thereto the following articles:

Article 26. The Licensee may convey an interest in lands within Project No. 1490, as described in revised Exhibit K (FPC No. 1490–69), to the Texas Electric Service Company, its successors and assigns (Companies), reserving the right for Licensee, its successors and assigns to use such lands for project purposes as authorized in the license for Project No. 1490. The revised Exhibit K (FPC No. 1490–69), showing the location of such lands and the proposed easement relating thereto, as revised October 18, 1965, are hereby approved. Nothing in this license shall be construed as an undertaking by the Commission to authorize or license the said Companies' steam-electric generating facilities.

Article 27. The Licensee may permit the use of its reservoir and other project works as a source of and return for cooling water for steam-electric generating facilities of said Companies; *Provided*, that the construction of

[3] *Federal Power Commission v. Union Electric Company*, 381 U.S. 90.

such facilities within the project boundary shall be limited to the areas designated on revised Exhibit K (FPC No. 1490-69); and *Provided further*, that the construction, operation and maintenance of such facilities does not affect injuriously the operations of Project No. 1490.

Article 28. The Licensee shall, for the conservation and development of fishery resources, consult and cooperate with the Texas Parks and Wildlife Department and the Bureau of Sport Fisheries and Wildlife in determining criteria for the design, construction, maintenance, and operation of appropriate fish protective screens or devices in relation to the water intake of the steam-electric generating facilities referred to in Article 27 and in developing criteria for project operation which would prevent an increase in the temperature of waters affected by the aforesaid facilities to or above a level which would be detrimental to the fishery and recreational resources; *Provided*, that in the event the Licensee and the fishery and wildlife agencies fail to agree on such criteria, the same may be determined by the Commission after notice and opportunity for hearing.

Article 29. The Licensee, within one year of the date of issuance of this order, shall submit for Commission approval its recreational use plan for the Morris Sheppard project in conformance with Section 4.41 R of Commission's Regulations under the Federal Power Act.

Article 30. The Licensee shall, for the conservation, and development of fish and wildlife resources, construct, maintain, and operate, or arrange for the construction, maintenance and operation of such facilities and comply with such reasonable modifications of the project structures and operation, as may be ordered by the Commission upon its own motion or upon the recommendation of the Secretary of the Interior or the fish and wildlife agency or agencies of any State in which the project or a part thereof is located, after notice and opportunity for hearing and upon findings based on substantial evidence that such facilities and modifications are necessary and desirable, reasonably consistent with the primary purpose of the project, and consistent with the provisions of the Act.

Article 31. Whenever the United States shall desire, in connection with the project, to construct fish and wildlife facilities or to improve the existing fish and wildlife facilities at its own expense, the Licensee shall permit the United States or its designated agency to use, free of cost, such of Licensee's lands and interest in lands, reservoirs, waterways and project works as may be reasonably required to complete such facilities or such improvements thereof. In addition, after notice and opportunity for hearing, the Licensee shall modify the project operation as may be prescribed by the Commission, reasonably consistent with the primary purpose of the project, in order to permit the maintenance and operation of the fish and wildlife facilities constructed or improved by the United States under the provisions of this article. This article shall not be interpreted to place any obligation on the United States to construct or improve fish and wildlife facilities or to relieve the Licensee of any obligation under this license.

Article 32. The Licensee shall construct, maintain and operate or shall arrange for the construction, maintenance and operation of such recreational facilities including modifications thereto, such as access roads, wharves, launching ramps, beaches, picnic and camping areas, sanitary facilities and utilities, as may be prescribed hereafter by the Commission during the term of this license upon its own motion or upon the recommendation of the Secretary of the Interior or other interested Federal and State agencies, after notice and opportunity for hearing and upon findings based upon substantial evidence

that such facilities are necessary and desirable, and reasonably consistent with the primary purpose of the project.

Article 33. So far as is consistent with proper operation of the project, the Licensee shall allow the public free access, to a reasonable extent, to project waters and adjacent project lands owned by the Licensee for the purpose of full public utilization of such lands and waters for navigation and recreational purposes, including fishing and hunting, and shall allow to a reasonable extent for such purposes the construction of access roads, wharves, landings, and other facilities on its lands, the occupancy of which may in appropriate circumstances be subject to payment of rent to the Licensee in a reasonable amount: *Provided*, that the Licensee may reserve from public access, such portions of the project waters, adjacent lands, and project facilities as may be necessary for the protection of life, health, and property and *Provided further*, that the Licensee's consent to the construction of access roads, wharves, landings, and other facilities shall not, without its express agreement, place upon the Licensee any obligation to construct or maintain such facilities. These facilities are in addition to the facilities that the Licensee may construct and maintain as required by the license.

(E) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license amendment. In acknowledgment of the acceptance of this license amendment, it shall be signed for the Licensee and returned to the Commission within 60 days from the date of issuance of this order.

(F) This amendment in the manner set out above shall not operate to alter or amend the license in any other respect, and shall not in any way constitute a waiver of any other part, provision or condition of the license.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

IOWA POWER AND LIGHT COMPANY, DOCKET NO. E-7252

ORDER AUTHORIZING ACQUISITION OF FACILITIES

(Issued December 22, 1965)

Iowa Power and Light Company (Applicant), filed an application on November 12, 1965, with the Federal Power Commission pursuant to Section 203 of the Federal Power Act, seeking authority to acquire certain electric facilities in the Town of Milo, Iowa.

Applicant is incorporated under the laws of the State of Iowa with its principal place of business office at Des Moines, Iowa and engages in the generation, transmission, distribution and sale of electric energy in 26 counties in central and southwestern Iowa.

Milo is an incorporated town in Warren County, Iowa and operates a municipal electric distribution system used to supply electric energy to customers within or adjacent to the Town. Maintenance of Milo's system is presently performed by the Applicant in accordance with an arrangement with Milo.

Under a Contract of Sale between the Town of Milo, Iowa, and the Applicant, entered into on October 18, 1965, the Applicant proposes to acquire the Town's entire municipal electric distribution system used and useful in supply-

ing electric energy to consumers in and adjacent to the Town, including the street lighting system.

At a special election held in the Town on November 22, 1965, the sale of the system by the Town to the Applicant as provided in the Contract of Sale was approved by a vote of 163 to 69, and a twenty-five year electric franchise to the Applicant was also approved at the same election by a vote of 157 to 69.

According to the application, Applicant proposes to pay $68,000 for the electric facilities of Milo, a price which Applicant states was arrived at by negotiations in which consideration was given to the original cost and reproduction cost, less depreciation, of the facilities, to the customers served thereby and to the revenues estimated to be derived therefrom. Applicant estimates that the depreciated original cost of the electric plant together with materials and supplies is $33,518. The transaction will therefore result in the creation of an electric plant acquisition adjustment of $34,482 which amount will be eliminated by a debit to Account 216, Unappropriated Earned Surplus.

After the acquisition the Applicant proposes to apply its standard rates for retail service and these rates will result in an overall reduction of 18.6%. Service for street lighting and other municipal use is presently unmetered and not charged, but under the Applicant, this service will be subject to metering and billing at the Applicant's standard rates.

According to the application, after the transaction is completed the Applicant's customers in the Town of Milo will receive better maintenance and repair service and the integration of the Milo distribution system into Applicant's surrounding area distribution system will benefit both Applicant and its customers.

Written notice of the application has been given to the Public Utilities Commission of Iowa and to the Governor of that State. Notice was also published in the Federal Register on November 25, 1965 (30 F.R. 14695), stating that any person desiring to be heard or to make any protest with reference to said application should on or before December 6, 1965, file with the Federal Power Commission, Washington, D.C. 20426, petitions or protests in accordance with the requirements of the Commission's Rules of Practice and Procedure (18 CFR 1.8 or 1.10).

The Commission finds:

(1) Applicant, a corporation, is a public utility within the meaning of Section 203 of the Federal Power Act, subject to the jurisdiction of the Commission as heretofore described and set forth in the Commission's order issued July 24, 1964, *Iowa Power and Light Company* in Docket No. E-7169 (32 FPC 345).

(2) By the proposed transaction, Applicant will merge or consolidate its facilities subject to the jurisdiction of the Commission with those of Milo, another person, within the meaning and subject to the requirements of Section 203 of the Federal Power Act.

(3) The proposed acquisition of facilities by Applicant, as described above, upon the terms and conditions set forth in the application, and subject to the provisions of this order will be consistent with the public interest as expressed in Section 203 of the Federal Power Act.

(4) The period of public notice given in this matter is reasonable.

The Commission orders:

(A) The proposed acquisition by Applicant of the aforementioned electric facilities, all as described above, is authorized and approved upon the terms

and conditions and for the purposes set forth in the application subject to the provisions of this order.

(B) Applicant shall record the proposed transaction herein authorized and the facilities and properties referred to above as provided in the Commission's Uniform System of Accounts Prescribed for Public Utilities and Licensees.

(C) This authorization shall expire unless the transaction herein authorized and approved is consummated within 90 days from the date of issuance of this order.

(D) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuation, estimates or determination of cost, or any matter whatsoever now pending or which may come before this Commission or any other regulatory body and nothing herein shall be construed as an acquiescence by this Commission in any estimate or determination of cost or any valuation of property claimed or asserted.

OPINION NO. 483

PUBLIC SERVICE COMPANY OF INDIANA, INC., DOCKET NO. E-7163

OPINION AND ORDER DETERMINING JURISDICTION AND DENYING MOTION FOR ORAL ARGUMENT

(Issued December 22, 1965)*

Syllabus

1. Commission is not obliged to show by tracing methods that out-of-state energy reaches the physical points of sale where, as here, generation from each source in system contributes directly or indirectly, and to ever varying extent, to energy present in all parts of system which are not isolated from out-of-state sources. P. 1517.
2. Since sales in question are from an electrically integrated interstate system and are pool sales, they are sales in interstate commerce subject to Commission jurisdiction. PP. 1517; 1534.
3. A sale is no less interstate in nature because interstate component is the result of conscious efforts of system's own operators rather than those of affiliated company—nor is it material that Power Company has no scheduled or firm purchases of power from out-of-state sources. PP. 1517, 1518.
4. It was entirely proper to exclude evidence on question of whether Power Company violated Power Act in acquiring municipal electric facilities. PP. 1518, 1519.
5. In a proceeding arising under Sections 201, 205 and 206 of the Federal Power Act, Commission *determines* it has jurisdiction over Power Company's sales and *denies* motion for oral argument.

Commissioner O'Connor *concurring* in part; *dissenting* in part.

Cameron F. MacRae and *H. G. Skinner, LeBoeuf, Lamb* and *Leiby* and *Paul G. Jasper* and *Greg Kimberlin* for Public Service Company of Indiana, Inc.

Daniel Goldstein, Donald M. Malone and *Ernst Liebman* for the Staff of the Federal Power Commission.

*Initial decision appears on p. 1531. Affirmed, *Public Service Company of Indiana, Inc. v. F.P.C.*, 375 F. 2d 100 (CA7–1967); Cert denied, 387 U.S. 931 (1967).

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

BAGGE, *Commissioner:*

This is a proceeding to determine whether wholesale sales made by Public Service Company of Indiana, Inc. (PSCI) to its municipal and cooperative customers in the State of Indiana (listed in Appendix A hereto) are subject to this Commission's jurisdiction under Sections 201, 205, and 206 of the Federal Power Act. The proceeding was initiated by order of May 1, 1964 (31 FPC 1064), instituting an investigation. It is presently before us on exceptions filed by PSCI and staff to the initial decision of Presiding Examiner Martin E. Rendelman. While the facts differ somewhat from those in *Indiana & Michigan Electric Company*, 33 FPC 739, Opinion No. 458, Docket No. E–7089, issued April 14, 1965, and *Arkansas Power & Light Company*, 34 FPC 747, Opinion No. 473, Docket No. E–7090, issued September 7, 1965, the basic principles expressed in those cases are applicable here. We agree with the examiner that PSCI's wholesale sales are subject to our jurisdiction under the Act and that it is, as a consequence, required to file its contracts with its wholesale customers as rate schedules in accordance with our Regulations.

As ordered by the Commission, the hearing began on November 9, 1964. It terminated on December 15, 1964. No petitions to intervene were received, so the only parties to the proceeding were PSCI and our staff. After the exchange of briefs the examiner issued his decision on June 16, 1965. PSCI and staff filed exceptions and briefs opposing exceptions. PSCI filed a motion for oral argument.

PSCI, by its own admission a "public utility" under the Federal Power Act, is an Indiana corporation with principal business office at Plainfield, Indiana. Its operations are confined wholly to Indiana where it serves large areas but not the larger municipalities. The company owns and operates five steam generating plants interconnected with 220, 138 and 69 kv lines. It is interconnected within Indiana with Indianapolis Power and Light Company (IP&L), Northern Indiana Public Service Company (NIPSCO) and Southern Indiana Gas and Electric Company (SIGE), which serve areas only within Indiana, and Indiana & Michigan Electric Company (I&M), which operates in Indiana and Michigan. It is also interconnected at the state line with Louisville Gas and Electric Company, which operates in Kentucky, and Cincinnati Gas & Electric Company, which operates in Ohio. Staff excepted to the examiner's finding that, although some of the interconnection agreements contemplate transactions in firm energy, PSCI does not purchase firm energy from or sell firm energy to these six interconnected companies. We see no reason to rule on that exception. Even if PSCI's interstate transactions are confined to economy and emergency energy interchanges, its sales at wholesale of such energy are subject to our jurisdiction.

Under the Federal Power Act (Section 201(b)), the jurisdiction of the Commission applies to the "sale of electric energy at wholesale in interstate commerce." A sale of electric energy at wholesale is defined as a "sale of electric energy to any person for resale" (Section 201(d)). A sale in interstate commerce is not defined. Therefore, the principal issue here is whether PSCI's sales at wholesale to its cooperative and municipal customers are "in interstate commerce". In *Indiana Michigan* and *Arkansas*, *supra*, we found that the wholesale sales involved were made from an integrated, interstate electric system. As such, we concluded that they were sales in interstate commerce and, as a consequence, were subject to our jurisdiction under Section 201 of

the Act. The record in this case now before us dictates that we reach the same conclusion.

The record shows that the PSCI system, as well as the systems to which it is directly and indirectly interconnected, is essentially a system to which all operating electric generators in the entire interstate network are interlocked electro-magnetically. Electric power is generated within the PSCI system and its connected systems in three phases, each at 60 cycles per second All generators within the PSCI system and its connected systems must operate at exactly the same frequency if the systems are to remain interconnected. Electric energy cannot be stored in electrical form. It is delivered when needed at the speed of light. On an electrical system operating at constant frequency, total generation must always equal load plus losses. Under any other circumstances, there would be an unbalance causing a change in frequency. Such a system cannot supply one connected load and not supply another connected load. It is incapable of distinguishing between loads on the system. All of the electric energy produced by all of the generating units is, as a consequence, delivered to the common transmission network. This acts as a single unit from which all customers are supplied. When a sudden load is added to the system, every generating unit on the system of PSCI, together with every generating unit on connected systems, responds by experiencing a loss in speed. The mechanical energy of rotation is thereby converted to electrical energy. This effect tends to stabilize the frequency and is one of the inherent advantages of interconnection.

A stable frequency is essential to industrial operations, in the accurate operation of electric clocks and in preventing non-scheduled transfers of net energy between systems. It is necessary, in order to avoid frequency fluctuations, that PSCI operate its system, principally through control of generation, so that the energy being generated on its system and on interconnected systems is sufficient to meet all loads plus transmission losses. To determine the generating capability needed, PSCI measures generation and interchange at all interconnections. The amounts are telemetered to PSCI's Central Load Supervisor's office in Plainfield, Indiana. Generation is then varied to maintain net interchange equal to scheduled arrangements with the interconnected companies. However, while PSCI can control the net transfers over tie lines, the actual flows of energy correspond to the electrical characteristics of the system. Even when no interchanges are scheduled, there are energy flows in or out of PSCI's system over the tie lines.

Frequency varies on PSCI's system, as on other systems. This occurs as a consequence of the inability to match load variations simultaneously with changes in generation. A technique known as tie-line control with frequency bias is used to maintain frequency at 60 cycles.

PSCI has entered into broad relationships with the interconnected companies in addition to those made necessary by reason of the physical interconnections. Thus, PSCI is one of 140 members of the Interconnected Systems Group, a network of utilities covering the eastern half of the United States. Each important generating station in the Group is assigned an appropriate share or "band" of generating capacity to be raised or lowered in the event of a system frequency deviation above or below a normal frequency.

Under arrangements with the interconnected companies PSCI participates in the correction of time errors resulting from frequency deviation. For this purpose it is notified by the Canton office of Ohio Power Company, a member of the American Electric Power System with which PSCI is interconnected through Indiana & Michigan Electric Company. Upon receiving such notice,

PSCI takes appropriate action through its load supervisor's control center. Through its interconnections PSCI also obtains assistance during emergencies.[1] Service is, therefore, more reliable because of the interconnections.

Under the contracts with the interconnected companies, operating committees are established. The contract between PSCI and Louisville Gas and Electric Company, dated March 1, 1955, provides that the Operating Committee is to review operations in order to obtain the greatest mutual benefits from the interconnection. To achieve this goal, the Committee is to provide for the interchange of (1) firm capacity and energy when the parties agree; (2) emergency energy; (3) economy energy when either party has energy available at a cost that will result in a saving in operating costs by using such energy to displace generation on the system of the other party; and (4) unintentional energy, that is, energy which may unintentionally flow where interconnections are "floating". Similar provisions are found in PSCI's contract with the Cincinnati Gas & Electric Company and in PSCI's interconnection agreements with the Indiana Companies, SIGE, I&M, IP&L and NIPSCO.

Furthermore, PSCI has a policy of providing a 5 percent spinning reserve over the peak period of the day to meet sudden increases in load. It does not maintain such a spinning reserve on its own system but rather relies on the spinning reserve of interconnected companies. In fact, in 42 out of 69 consecutive weeks in 1963 and the first four months of 1964, PSCI did not maintain on its own system a spinning reserve equal to 5 percent of weekly peak load.

An analysis of the movement of energy onto and from the PSCI system reflects the importance of its interconnections. In 1963 PSCI generated 6,945,324,400 kwh and received from other companies 823,812,000 kwh of which 386,971,000 kwh or 5.6 percent of total net generation was received from companies generating solely in Ohio and Kentucky. This amount of out-of-state energy does not include out-of-state energy received through the facilities of the other Indiana companies. PSCI treats the greater part of this energy as transferred and argues that it purchases but 0.1 percent of its total energy requirements (including for this purpose economy and emergency energy). In reaching this result, PSCI has netted the flows in one direction against the flows in the other direction so that its net receipts become a very small percentage of generation. However, what we consider significant are not the net receipts but the substantial amount of out-of-state energy introduced into the system of PSCI. The label given the energy by PSCI is not decisive. It is purely a matter of accounting to characterize a large part of it as transfer energy. We agree with the statement in PSCI's brief opposing exceptions that the means of accounting for the energy transfer are of no assistance in determining the jurisdictional question.

PSCI also contends that the record, unlike that in the *Indiana Michigan* case, *supra*, does not show pool operation. It contends that its transactions with interconnected companies are limited to the interchange of emergency and economy energy and energy transfers and that it neither buys nor sells firm energy. One of PSCI's witnesses stated that the interconnection agreements do not provide for any multi-state pool-type operation or any central discipline of regulation and that, in keeping the system intact for the purpose of supply-

[1] For example, when generating capability of its Gallagher generating station was curtailed on January 29, 1963, because of inability to receive cooling water under icing conditions, substantial amounts of power were received from the interconnected companies, particularly from Cincinnati Gas & Electric Company and Louisville Gas & Electric Company.

ing its customers, the interconnections have no place in the application of company judgment. While admitting benefits from pooling, such as the reduction in its spinning reserve, PSCI argues that the *Indiana Michigan* case, *supra*, is not applicable.

There are obvious differences between the present case and *Indiana Michigan*, *supra*, and *Arkansas*, *supra*, both of which involved corporate control and centralized operation, but this is not "mere connection" on the part of PSCI. These interconnections "transmit energy actually moving in interstate commerce." *Jersey Central Co.* v. *F.P.C.*, 319 U.S. 61, 72. As indicated above, it is tied to six other companies at 17 points and is part of an interstate power network. Hence, there is a pooling operation here, and PSCI's sales are, as a consequence, sales made from an interstate pool.

PSCI argues that we are obliged to show by the tracing methods used in the past that out-of-state energy reaches the physical points of sale involved herein. While there was a difference of opinion between witnesses for PSCI and our staff as to whether it is possible to make such a tracing study, such polemics are now irrelevant in light of our decision in *Arkansas*, *supra*. As we observed in that case, it is an oversimplification to talk in terms of a flow of electricity from point to point in an integrated power network. Instead, generation from each source in the system contributes directly or indirectly, and to an ever varying extent, to the energy present in all parts of the system which are not isolated from out-of-state sources. This rationale is equally applicable here. There is nothing in this record which establishes that the points of sale at wholesale are isolated from out-of-state sources. On the contrary, the record here demonstrates that the nature of PSCI's system is such that out-of-state energy could, at one time or other, reach all of PSCI's customers during the periods it admittedly was brought into and permeated the backbone transmission system.

On the basis that the PSCI sales in question are sales from an electrically integrated interstate system and are pool sales, we conclude that they are sales in interstate commerce subject to our jurisdiction.

PSCI also argues that we do not have jurisdiction because it generates a greater amount of energy within Indiana than it sells to the wholesale customers, that it has not been established that PSCI's sales to the wholesale customers are effected otherwise than over facilities used in local distribution, that sales to cooperatives are not sales for resale, and that the Commission does not have jurisdiction over PSCI's sales to cooperatives and municipals because regulation of them is reserved to the State of Indiana. These arguments have been considered at some length in either the *Indiana Michigan* or *Arkansas* opinions, *supra*, or both, and do not warrant further discussion.

Commissioner O'Connor, in his dissenting opinion, distinguishes the case now before us from the *Indiana Michigan* and *Arkansas* cases, *supra*. In the latter cases the sales in issue were made by a company which was a subsidiary of a holding company operating its multi-state properties from a central dispatching station. PSCI, on the other hand, represents a much more common situation in which each constituent member of a pool is corporately independent and largely controls the extent to which generation from its plants will be used to meet its loads and the loads of companies with which it is interconnected and the extent to which it will depend upon generation from other companies to meet its loads. As we made clear in *Indiana Michigan*, *supra*, this is a distinction without any difference insofar as the essential jurisdictional question is concerned; a sale is no less interstate in nature because the interstate component is the result of the conscious efforts of the system's own operators

rather than those of an affiliated company. Nor is it material, if true,[2] that PSCI has no scheduled or firm purchases of power from out-of-state sources. For even if we lay aside the fact that PSCI uses its interstate interconnections to provide it with power in the event of emergency outages and regular maintenance shutdowns, its frequent economy purchases cannot be ignored because they are scheduled on the basis of day-by-day or hour-by-hour load and generation factors rather than by some more regular occurrence. It is immaterial that the economy sales from PSCI system tend to equate over a period of time with the purchases it makes with the result that the amount of money which changes hands is relatively small. To characterize PSCI's relationships with its neighbors, including those in or receiving power from other states, as mere interconnection is simply to ignore the record.

The dissent also appears to indicate that the nature of PSCI's system makes it "unlikely" that out-of-state energy reaches many of the wholesale purchasers. Such is not the case. The fact that the Gallagher and Wabash River plants are normally in constant operation does not make it "unlikely" that nearby wholesale purchasers receive interstate power; on the contrary, it was conclusively demonstrated that interstate power could and at times did permeate the transmission lines leading from these plants to the wholesale purchasers. The evidence from PSCI's own records establishes that PSCI's in-state plants do not isolate loads from interstate energy coming into the system from outside the state.[3] In short, it is PSCI, and the dissent, which talk in terms of theories, analogies, and assumptions, and the staff's comprehensive engineering evidence which demonstrates the reality of the situation.

The dissent admits that tracing may be impossible or extremely impractical in many situations and that it "is clear that such a situation cannot defeat our jurisdiction." But what would be our alternative in situations if we were unwilling to accept the engineering analysis upon which we relied in *Indiana Michigan, supra*, and *Arkansas, supra*, and which we have applied here? As we understand the dissent, in such circumstances engineering necessities dictate application of an irrefutable, albeit totally fictional presumption, that a load is served by the particular generator nearest thereto to the exclusion of distant power sources. This, of course, means that an unwillingness to consider anything but tracing would leave the Commission with no jurisdiction, where, as here, tracing is not possible.

The staff raises an issue as to whether PSCI violated the Power Act in acquiring the municipal electric facilities of Crothersville, Indiana, in July of 1964 without Commission approval. The examiner excluded all evidence on this matter and did not mention it in his decision. Our order instituting this proceeding (31 FPC 1064) is concerned only with the Commission's jurisdiction over PSCI's wholesale sales and whether the company should be required

[2] As indicated *supra* the examiner's finding to this effect is challenged by the staff.

[3] To take one example, staff witness Jessel testified that out-of-state energy from Kentucky commingled with energy from Gallagher and Edwardsport generating plants and went beyond those plants to the Freelandville substation located a few miles northeast of the Edwardsport plant (Tr. 533–540, Exh. 21; and see Tr. 1038–1042). PSCI's counsel admitted that PSCI's records showed this to be the fact (Tr. 539–540).

to file rate schedules. Therefore, the examiner's exclusions of the evidence on this question was entirely proper. Furthermore, we do not think that the public interest would be advanced by instituting a separate proceeding with respect to this transaction which took place at a time when our jurisdiction over PSCI was subject to doubt.

PSCI has filed a motion for leave to present oral argument, alleging the importance of the questions involved and the distinction between this case and the *Indiana Michigan* case, *supra*. In our opinion the record has been adequately briefed. No purpose would, therefore, be served by the additional time and expense of oral argument.

The Commission further finds:

(1) Public Service Company of Indiana, Inc. (PSCI) is a corporation organized and existing under the laws of the State of Indiana with its principal business office at Plainfield, Indiana.

(2) PSCI owns and operates facilities, among others, for the transmission and sale at wholesale of electric energy which is transmitted between the States of Indiana, Ohio and Kentucky and consumed outside the State in which it is generated, all of which facilities are in addition to and do not include facilities used for the generation of electric energy, facilities used in local distribution or only for the transmission of electric energy in intrastate commerce, or facilities for the transmission of electric energy consumed wholly by the transmitter.

(3) PSCI is a public utility within the meaning of that term as used in the Federal Power Act.

(4) PSCI is located in the midst of a large power pool and operates its facilities as part of an integrated, interstate electric system. PSCI receives on its system large quantities of energy generated outside Indiana. As a result, all wholesale sales by PSCI's system are sales from an integrated, interstate electric system, are pool sales, and are sales of electric energy in interstate commerce within the meaning of Section 201 of the Federal Power Act.

(5) PSCI sells electric energy to the customers listed in Appendix A hereto, and each such sale is a sale at wholesale in interstate commerce within the meaning of Sections 201, 205 and 206 of the Federal Power Act.

(6) The facilities of PSCI by which it delivers electric energy to its municipal and cooperative customers are not used in local distribution within the meaning of Section 201(b) of the Federal Power Act.

(7) PSCI has not filed rate schedules for service to its wholesale customers. PSCI, therefore, has been and is continuing to violate the provisions of Section 205 of the Federal Power Act and Part 35 of the Commission's Regulations promulgated thereunder.

(8) PSCI has not posted any of the rate schedules which it has submitted for filing under the Federal Power Act. PSCI, therefore, has been and is continuing to violate the provisions of Section 205(c) of the Federal Power Act and of Section 35.2(d) of the Regulations promulgated thereunder.

(9) PSCI should be ordered to file with the Commission its rates and charges for services to its wholesale customers, including the classifications, practices,

and regulations affecting such rates and charges, together with all contracts which in any manner affect or relate to such rates, charges, classifications, and services pursuant to the provisions of Section 205 of the Federal Power Act and the Regulations promulgated thereunder.

(10) PSCI should be ordered to comply with the posting requirements as set forth in Section 205(c) of the Federal Power Act and in Section 35.2(d) of the Regulations promulgated thereunder.

The Commission orders:

(A) Within 30 days after this order becomes final, PSCI shall file in accordance with Part 35 of the Commission's Regulations and Section 205 of the Federal Power Act its contracts with each of its wholesale customers listed in Appendix A as its rate schedules for its sales at wholesale of electric energy to those customers. Such rate schedules shall remain effective until and unless superseded by a change filed pursuant to Section 205(d) of the Act and Section 35.3 of the Regulations thereunder, or changed pursuant to order of this Commission.

(B) PSCI shall comply with the posting requirement of Section 205(c) of the Federal Power Act and Section 35.2(d) of the Regulations with respect to all of its rate schedules required to be filed with the Commission.

(C) The decision of the presiding examiner, to the extent not inconsistent herewith, is adopted as the decision of the Commission.

(D) Exceptions not granted herein are denied.

(E) PSCI's motion for oral argument is denied.

Commissioner O'Connor *concurring* in part and *dissenting* in part.

O'CONNOR, *Commissioner, concurring in part* and *dissenting in part:*

The issue in this proceeding is whether certain sales for resale by PSCI are subject to the jurisdiction of this Commission. It is my opinion that, from the record before us, it cannot be concluded that energy generated in another state and transmitted into Indiana is present in each sale for resale transacted between Public Service Company of Indiana, Inc., and the 77 municipalities and rural electric cooperatives involved. Although the record shows, albeit with less clarity than may be desirable, that some of the contested sales are jurisdictional, there is no evidence showing out-of-state electrical energy present in all sales. I dissent, therefore, from a determination to assume that, solely for the reason PSCI is interconnected with three public utilities operating in other states, all its wholesale sales are jurisdictional.

I am convinced that, under the law and the facts, PSCI's sales in the northern sector of its system are solely in intrastate commerce; that most sales in the central sector of its system are probably in intrastate commerce; and that only the sales in the southern sector may reasonably be considered to be in interstate commerce. The majority's determination to assume all of PSCI's sales are jurisdictional not only constitutes a major, unwarranted extension of authority; it also effects a fundamental change in the division of authority between Federal and State governments, supplanting several decades of active State regulation.

I.

PSCI is the successor company of a number of small electric systems in southern and central Indiana which combined their resources during the period immediately prior to 1942. PSCI operates the largest electric utility system in Indiana, serving at retail a compact territory which includes 69 of the 92 counties in Indiana, and includes sales in 714 cities, towns, unincorporated communities, and adjacent rural areas. All facilities are located within the state. At present PSCI is directly interconnected across the State boundary with only two companies, and is interconnected within the State with four non-affiliated companies, only one of which operates in more than one state. It has filed with the Commission all sales and agreements with these companies. Within the State it owns and operates five major generating stations, including two large steam-electric plants which are connected to load for every day of the year. It has interconnected with neighboring companies since at least 1948, and it appears some interconnections of predecessor companies were in existence prior to that date. PSCI has been a "public utility" within the meaning of the Federal Power Act for a number of years, *Indiana & Michigan Electric Company*, and *Public Service Company of Indiana, Inc.*, 9 FPC 617, 619 (1950), and it does not contest this status.

PSCI's interconnections require that it operate in parallel with most electric companies in the eastern portion of the United States. It is a member of the Interconnected Systems Group. Each important generating station in the Group is assigned a particular "band" or share of the total generating capacity, which is to be raised or lowered in the event of a system frequency deviation above or below a normal frequency. Admittedly PSCI's system operations are more reliable because of the interconnections, and here is a recent, significant example of such emergency assistance. On January 29, 1963 (and reportedly again recently), the generating capabilities of its Gallagher station were curtailed by an inability during a sharp freeze to obtain sufficient cooling waters, and substantial amounts of power were received, primarily from Cincinnati Gas & Electric Company and Louisville Gas and Electric Company.

Even apart from this emergency it undoubtedly receives into its system energy generated in another State. On the other hand its transactions with interconnected companies are limited by contract to the interchange of emergency and economy energy transfers, and it neither buys nor sells significant amounts of energy. PSCI considers the greater part of the out-of-state energy it receives to be merely transferred, taking into account scheduled flows, inadvertent flows, and similar deliveries to other companies. It purchases less than one-tenth of one percent of its total energy requirements. PSCI measures all interchanges at its points of interconnection, and all of its generating capacity is under constant metering. Such amounts are telemetered at its central load supervisor's office in Plainfield, Indiana, where generation is automatically varied to maintain scheduled interchanges over its interconnections. PSCI controls net transfers. In addition, any transfers beyond scheduled transactions occur only upon approval of the load supervisor in Plainfield. From the standpoint of generating resources and transmission capability, PSCI is self-sufficient to the extent no reliance on interconnected systems is necessary. To keep its system intact for the purpose of meeting its customers' requirements, PSCI does not consider its obligations under the interconnection agreements. Through such central control of its own system, PSCI exercises full discretion over any transfers outside its system. There is no central discipline of its operations from outside the State, and there is no control by it over transmission and sale in other States. Its primary transmission system is capable of receiving power from out-of-state, but there is no evidence of the ability of its generation, transmission and interconnection facilities to transfer large blocks of power under all circumstances.

Of its sales to 77 rural cooperatives (REMC's) and municipalities, all rates for such service have been regulated continuously by the Public Service Commission of Indiana. The sales to municipalities have been regulated since the state commission was established in 1913, and the sales to REMC's have been under regulation since 1937, soon after passage of the Rural Electrification Act. The latest annual report of the state commission indicates active rate regulation, and the statutes authorizing it clearly contemplate such regulation of wholesales.

II.

The third in a recent series of cases involving the Commission's jurisdiction under Section 201 of the Federal Power Act, this proceeding involves the fundamental question of our authority over sales for resale to local systems where the public utility is interconnected with other companies at or across the borders of a State. In the two prior cases, *Indiana & Michigan Electric Company*, Opinion No. 458, issued April 14, 1965, 33 FPC 739 and *Arkansas Power & Light Company*, Opinion No. 473, issued September 7, 1965, 34 FPC 747, we were confronted with compelling cases of full integration and pooling across state lines where there was affiliated corporate control and central interchange of energy involving more states than one. Careful studies of system operations in each case showed that energy generated in another State probably reached each point of sale for resale, and the *Arkansas P&L* decision was assisted by a showing through conventional tracing methods that out-of-state energy probably reached each point of sale there in issue. Although the tracing study in *Indiana & Michigan* was of limited utility, largely because of the absence of meters on that system, there was the showing that, because of a complete shutdown of major generators at regular intervals, out-of-state energy probably reached each point of sale in issue. Most of the operating conditions present in those two cases are not present here, and certainly there

is no evidence to support a finding that out-of-state energy is present, even in minimal amounts, at every point of sale for resale. Contrary to the majority, it is my opinion that mere interconnection will not suffice under the Act, and that where there is no complete integration of the power pool, out-of-state energy must be shown to reach each point of sale for the Commission's burden of proof to be discharged. Because of the manner of operation of many electric systems, this is impossible to show.

Certain difficulties of electrical theory cannot be surmounted. Science cannot explain what electricity is. At best its effects can be measured and predicted, but its nature is unknown. It is not an entity, but a way in which entities behave. When we have told how facilities behave when they are electrified, and when we have described the circumstances in which they are energized, it appears that we have told all there is to tell. In the proceeding before us the experts have disclaimed expertise to define electricity or to analogize it to situations cognizable to the layman. By attempting to grapple with such theoretical problems the Commission is placed in an untenable position for it cannot determine the statutory prerequisite to the exercise of its jurisdiction. Absent a fully integrated power grid, where theory merges with practice, we cannot rely upon assertions in the briefs that electricity moves with the speed of light, that commingling occurs *per se*, and that there is a free flow of energy along a grid. None of these assumptions describe actual conditions of more limited interconnections. Undoubtedly electricity can flow to particular loads with the speed of light, thereby energizing portions of a transmission system; however, this theoretical assumption does not tell us, between particular interconnected systems, of complete commingling and free flow. Particularly irrelevant to power flow is the fact of parallel operation for, while it shows a measure of interstate activity, it does not mean power on the transmission system so flows. We must first know the complexity and nature of the interconnections, the presence of generators and their relation to loads, and of the losses necessary to energy transmission. The interconnections within a system's lines are important also, for, if they are kept open for such purposes as emergency isolation, then free flow is not possible. Absent the complete integration that prevails in a fully automated regional grid, theoretical assumptions are not helpful, and a careful engineering analysis of measureable effects based upon an analogy to liquids along the transmission system will inform us of the measure necessary to trigger our jurisdiction. Theories of perfect interconnection cannot support our authority; we must rely upon known effects of operation.

Principles of tracing attest to the validity of an engineering approach. Meters provide us a measure of the energy transmission that actually occurs, and to the engineer this is based on an effect analogous to the flow of liquids. Relating source to load, therefore, on the basis of metered flow, we are in a position to establish jurisdiction. Similarly as with theoretical concepts, there are difficulties in relying solely on meters. Many electric systems do not utilize meters except at points of sale. Thus, in *Indiana & Michigan*, there was no way to identify source to load by meter readings at substations. It is clear that such a situation cannot defeat our jurisdiction. Nevertheless, it does not appear that metering at all points along a transmission system is essential to a showing of jurisdiction. If significant amounts of out-of-state electricity can be measured at major substations, nearby points of sale will undoubtedly receive such power. The engineering techniques of electric generation and transmission is such that energy flow will seek the point of least resistance; that is, the effective flow will occur at the speed of light from

generator to nearest load rather than supporting service to a particular load from an out-of-state source more removed from the sale in question. The condition in a particular transmission network, therefore, is one of a field supplied by a particular major generator to the exclusion of distant power sources, and the changing circumstances of generation and load do not introduce an instability to support constant free flow. Regardless of what theory may postulate, the engineering necessities dictate such a concept of operations.

For PSCI an analysis of system operations indicates that out-of-state power will not be present in measurable amounts in the immediate vicinity of the power sources relied upon by the company. It is undisputed on the record that PSCI's major generating stations at Gallagher and at Wabash River are on constant run, and it is therefore unlikely that nearby sales would involve out-of-state power. One example will suffice here. At the hearing PSCI showed that for one particular period of time, supply from Paddy's Run at Louisville could not, by virtue of the construction of the bus bar, reach beyond Gallagher as a commingled electrical supply. Instead, PSCI showed that all the supply from Kentucky would move to the Edwardsport line. The argument is that nearest load was supplied from nearest source which is fully supported by Dean Moench's testimony. It is significant that Staff did not contest this showing. The pleading was that of confession and avoidance; while what you say is true, at other times the supply from Paddy's Run was such that supply went out along other points on the bus bar. It is difficult, if not impossible, to resolve this position with the argument that supply commingles and then flows along the transmission line in proportional amounts. The above example shows clearly that the opposite is likely true. On the other hand it becomes indisputable that some out-of-state energy moves into the PSCI system and is utilized at some points of sale for resale along the line to Edwardsport. The consequence of PSCI's manner of operations is that, because it relies largely upon its own generation, no out-of-state power can reach each point of sale along major loops of its 69 kv system. This conclusion is made all the more compelling by the nature of its participation in interconnections with neighboring utilities.

Although the term "power pool" is widely utilized, there is no generally accepted definition of what it is under various conditions. It is clear that power pools vary widely in size and complexity, depending on the purposes and services provided. The *National Power Survey Report* defines a power pool as "Two or more electric systems which are interconnected and coordinated to a greater or lesser degree to supply, in the most economical manner, electric power for their combined loads." This broad definition does not emphasize an ability to meet supply under all circumstances. On the record before us it cannot be determined whether there is sufficient power, absent PSCI's own generation, to meet the needs of its customers. In my opinion, "fully coordinated" or "integrated" should mean that the interconnected system, whether of a single company or a pool of many companies, is designed, planned, and operated as a unit, so that each part will fully reflect the duties which might be imposed upon it as a system. As a corollary the purpose would be that the system is operated for maximum economy consistent with continued service.

Furthermore, a power pool composed of independent companies cannot be considered to be integrated to the maximum degree absent some consideration of the agreements it has for purposes of transferring power. The examiner here found that there was not a full integration of facilities under the interchange agreements. PSCI is bound to exchange only minimal amounts of

power for emergency and economy supply. Significantly, PSCI retains control over transfers of power above that required to meet its system needs. Furthermore, there is no showing on this record of what is required to maintain full integration in the event of an emergency. The basis for load rejection and the nature of the interconnections themselves dictate full consideration of this matter.

For the present, particularly absent some prior indication to the industry, it is my opinion that our use of interconnections to trigger complete federal control must be restricted to the highly integrated operations of interstate systems, such as confronted us in *Indiana & Michigan* and *Arkansas Power & Light*. At the most we should not extend such a presumption of jurisdiction beyond closely integrated and centrally coordinated operations of independent companies, for, as we emphasized in *Indiana & Michigan*, the extent of integrated operations is the touchstone. (*Supra*, pp. 743, 744.) The present degree of integration is clearly of multifarious degrees, and until the state of the art has progressed to a full assurance of continuity of service, we cannot assume free flow as may occur in power grid. This condition has not been shown to prevail on the PSCI system. Mr. Philip Sporn has stated, in discussing the necessary tools of an integrated system, that "Because of the basic handicaps of size and distance, the full utilization of protective elements and regulating elements is essential if a system is to be economically sound and, from a service standpoint, reliable." Of critical importance, according to Mr. Sporn, is ultrarapid reclosure, and, as technical barriers arise from barriers of distance and area, reliable and effective communication and telemetering are essential. The emphasis is upon speed for the lag encountered by generation response and by intersystems communications can operate to frustrate theoretical assumptions of the possibility of free flow between independent electrical systems. For the present, particularly upon the records thus far presented for Commission decision, it appears that complete integration requires central control. PSCI maintains individual and separate controls. It thus has not committed the entirety of its system operations to interstate commerce.

Problems of interconnection and effective pooling are in a state of change. Some systems can respond fully, for their intersystems agreements are controlled on a group basis. Specifically, Staff testimony emphasized the example of the PJM system. However, many systems do not respond instantaneously to interconnection requirements. PSCI's agreements are of limited obligation, and we are without evidence of the capabilities of its system to respond to major changes in intersystem load requirements. Until such interconnections are negotiated and completed, we are not justified in applying theoretical perfection to imperfect conditions of energy flow. There is certainly no national grid in this Nation, and there are few fully integrated grids involving more than one State.

The majority, however, chooses to believe that all interconnections are the same, despite expert testimony that the Interconnected Systems Group is a "pool of the lowest order," and despite further testimony that varying degrees of business transactions among any member of an interconnected system necessitates full consideration of such purposes as emergency spinning reserve, types of energy transactions, joint facilities, and sharing of costs. Clearly there is a distinction between various types of interconnections, and the varying degrees of integration that exist dictate the ability of free flow to occur under all circumstances. Finally, it is significant that, absent a fully integrated, interstate system, the commingling that is essential for energy to permeate a system is based upon Staff's pulse theory. The majority apparently rejects that con-

cept. Their commingling must thereby fall, and we are left only with tracing principles to determine jurisdiction. Thus, the proof of energy flow is not made.

III.

This proceeding presents new matters of policy for determination. For present purposes, and in the absence of precise guidelines of the prerequisites for complete integration of a power pool or, more appropriately, of an interstate grid, it is my opinion that PSCI must be considered *sui generis*.

The long history of Commission administration of the Federal Power Act and the numerous judicial determinations of our authority thereunder establish that electric energy transmitted from one State and consumed at a point in another State must be shown to be present in a particular sale for resale in order that it become subject to Federal standards. In *Federal Power Commission* v. *Southern California Edison Company* (the *City of Colton* decision), 376 U.S. 205 (1965), the Court declared that "status as a public utility does not decide the question whether the FPC may assert jurisdiction over the rates." By the opinion today the distinction is probably eliminated. The Court went on to reaffirm the principle that federal jurisdiction of sales at wholesale "follows the flow of electric energy", and upon such a showing state regulation could not interfere. Two tests for rate jurisdiction were prescribed: power "moving in interstate commerce", and the absence of specific exemption in Section 201(b). Commission practice has similarly been not to undertake jurisdiction over a sale for resale unless that sale were shown to include some measure of out-of-state energy.

While shifting the burden of proof, of necessity, in *Indiana & Michigan*, we specified that "Of course, there may still be some power systems in which the flows are simple enough to be susceptible of the tracing analogy." (*Supra*, p. 746.) In this proceeding there are Staff exhibits showing the penetration of out-of-state energy on the PSCI system, and tracing is utilized for this showing. Although tracing may require more extensive proof, each sale should be shown, to the extent practicable, to be jurisdictional. Furthermore, as we declared in *Arkansas P&L*, "There may be situations where a public utility which is part of an integrated interstate power system can show that some of its wholesale sales are isolated from the interstate network, and, as such, are not in interstate commerce." (*Supra*, p. 751.) Furthermore, Arkansas P&L's system proved susceptible to tracing. PSCI is less complicated than either of those two systems, and, in my opinion, PSCI is embraced within the exceptions we provided.

Since PSCI is not fully integrated into an interstate grid, it need not provide the proof. Because of the limits on its interconnections, PSCI has large portions of its system isolated from the rest of the network. This is made clear by the historic evolution of its system. Originally a number of separate electric companies, it was successively interconnected by high voltage lines; nevertheless, the lines at 69 kv and less are allegedly maintained separate from each other: many of these subtransmission lines have open switches where they would otherwise be interconnected. It is not without significance that there is no record evidence of the smaller transmission networks. This points up the absence from the majority opinion of a convincing engineering analysis. In all likelihood, it cannot be shown. Here, the evidence lacking is that of a proper relationship between source and load to show that interstate energy is necessarily present. The principal deficiency in the record turns on this absence of load requirements. The record should be remanded.

IV.

Such a procedure is required for several reasons, in addition to the requirement under the Act that a showing of power flows in interstate commerce be made.

The thrust of the statute is to protect from Federal preemption such state regulation as may be exercised, although, of course, once out-of-state energy is shown to be present, preemption must follow. As the Court declared in *Connecticut Light & Power Co.* v. *F.P.C.*, 314 U.S. 515 (1945):

> The policy declaration that federal regulation is "to extend only to those matters which are not subject to regulation by the States" is one of great generality. It cannot nullify a clear and specific grant of jurisdiction, even if the particular grant seems inconsistent with the broadly expressed purpose. But such a declaration is relevant and entitled to respect as a guide in resolving any ambiguity or indefiniteness in the specific provisions which carry out this intent. It cannot be ignored.

By their sweeping determination today the majority of necessity ignores this presumption incorporated into Section 201(a).

In drafting provisions of the Wheeler-Rayburn Act of 1935, the legislators had two objectives: first, to assure adequate federal regulation of those aspects of the electric power industry which were immune, either legally or practically, from state regulation and control; and, second, to preserve the full regulatory authority of the states and to assist them, wherever possible, in making that regulatory authority more effective. In this proceeding all facilities of PSCI are located within one State, and thereby the costs to PSCI, except for the transfers out-of-state energy, are within the effective authority of the Indiana Public Service Commission. The transfers of the out-of-state energy are within the effective regulation of the Federal Power Commission. The regulatory scheme thus dovetails, and the issue of whether we should presume interstate power reaches each sale for resale here should not be resolved against the state commission.

Even more significant is the legislative history of Section 201, where there is clear evidence that all wholesale transactions were not outside state regulatory authority. Perhaps the most revealing exchange is the following [Hearings on H.R. 5423; House Interstate and Foreign Commerce Committee; 74th Congress; 1st Session; p. 432 (1935)]:

> Mr. PETTENGILL: Here [indicating] is Oregon; here is a generating plant and a wholesale buyer in Oregon.
>
> Now the rate that this [indicating] wholesale buyer in Oregon pays is regulated by the Oregon Commission, is it not?
>
> Commissioner SEAVEY: If it is intrastate; yes.
>
> Mr. PETTENGILL: Now here is a wholesale buyer across the [State] line * * *
>
> Let us assume he buys substantially the same quantity * * *
>
> Now, if he pays no more than this man [indicating] pays, and this man's rate is fixed by the Oregon Commission, there people [indicating] are indirectly benefited by the regulation that takes place in Oregon.
>
> Commissioner SEAVEY: That might be true; yes.
>
> Mr. PETTENGILL: And I want to know whether the fact that the juice crosses a State line is used by the generator in Oregon to gyp the California buyer. That is what I do not get through my head. Does he or does he not?

Commissioner SEAVEY: He might and maybe he does not. It depends upon whether he wants to charge and does attempt to charge more for the wholesale power that he delivers across the line without regulation than what he delivers inside the line with regulation.

The Chairman: Is this not the whole upshot of it, that the interstate end of it is not regulated by anything?

Commissioner SEAVEY: That is true.

The Chairman: The intrastate is in many instances.

Commissioner SEAVEY: That is true.

The Chairman: And the question of whether or not in one instance the transmission across the State line costs more or less is not the question. The question is whether you are going to regulate the interstate end of it.

Commissioner SEAVEY: That is true.

However, the intrastate sale for resale above described, although clearly it is a "mere" interconnection of the "lowest order," would no longer be non-jurisdictional by the standards invoked today. This indicates the disparity between legislative intendment and agency administration.

A fundamental distinction between Indiana & Michigan and Arkansas P&L, on the one hand, and PSCI, must be emphasized. During a period when many electric companies relied upon the interstate-intrastate distinction that prevailed for three decades, both companies expanded their operations across State lines, and they thereby triggered a substantial federal interest. Furthermore, since their operations were such that out-of-state energy probably reached each point of sale for resale, they properly incurred the substantial burden, on a record showing full integration of facilities in the interstate commerce, that no out-of-state power reached the sales in question. Presumably a showing might be possible, with complete metering studies, that some points of sale were isolated, not relying on energy from another State. PSCI, on the other hand, carefully observed its intrastate character to the extent that certain desirable aspects of interconnection were not, as of 1963, achieved. PSCI is continuously expanding its interconnections, and it undoubtedly will participate, should it be technologically feasible, in a fully integrated interstate pool. At that point, while it is fully aware of its obligations, we would be justified in asserting federal control. No such presumption is now proper where it is clear the company has relied upon past action of the Commission for purposes of system planning and financial undertakings.

Impressed as I am by the possibility that this agency has approached the limits of effective power from a central source and convinced that this agency can obtain greater effectiveness and greater vitality through the immediacy of participation in government by regional and local institutions, the conclusion on the record now before us is compelling that, absent a more convincing showing of the presence of some interstate power in each sale here in question, there is no basis for assuming such sales to be within the federal domain. The only way to assess the majority's jurisdictional bias is their conviction that regulation of all sales for resales is desirable and necessary to permit the most complete and thorough regulation of the electric power industry as is possible by a federal agency. Their objective assumes the scope of Commission jurisdiction under Section 201 to be co-extensive with an assessment of the need for consumer protection. This is incorrect. Of course, a primary aim of the Federal Power Act is consumer protection, but jurisdiction does not depend upon or follow consumer need; instead, it is established by law. The statute is a recognition and accommodation of conflicting interests—the preservation of local regulation of intrastate transac-

tions as opposed to pervasive federal regulation reaching constitutional limits; avoidance of the institutional conflict within the power industry; and accommodation of competing regional and intrastate systems.

Underlying the majority approach is a result which reinvokes and indeed encourages the fundamental difference that exists between the three institutional segments of the power industry: the conflict between proponents of private ownership and those endorsing public ownership of the power industry. Federal encouragement of that difference is certainly not within the purposes of the Power Act. To the contrary, it represents an entrapment of systems which have voluntarily interconnected upon the assumption that this difference would not be involved. While the statute is not specific, the jurisdictional test clearly requires regulation within the limited thrust of Section 201. In my opinion, where the federal interest is clear, ambiguities are less compelling, but, where the State interest is established, then the statutory declaration should be respected as a guide. The burden should remain on the proponent of federal regulation.

V.

Although we are not justified in presuming that out-of-state energy is present in each point of sale for resale, Staff nevertheless placed a limited tracing study in the record for rebuttal purposes. The study establishes that certain segments of PSCI's system receive out-of-state energy from Louisville and from Cincinnati. This, in my opinion, constitutes sufficient proof for our jurisdiction to attach. The record is far from complete on this point, primarily because there is no relation of the tracing evidence to load to show which points of sale for resale necessarily receive out-of-state energy. However, by the evidence of flows from the out-of-state sources, and knowing that the sub-transmission lines and primary distribution lines are interconnected, it necessarily follows that numerous sales for resale by PSCI are within the authority of this Commission. I emphasize that such a tracing study does not involve many of the fictions required by such a test of jurisdiction. What it does involve is a willingness to abandon zeal for jurisdiction in favor of adherence to the out-of-state energy requirement.

In its tracing study Staff showed, to my mind satisfactorily, that out-of-state power at times reaches most points of sale for resale in the southwestern sector of the PSCI system. In addition, the supply received from Cincinnati is of large proportions at times; thus, sales in the southeast sector are jurisdictional. More precisely, it is clear that up to Edwardsport it is necessary that loads in that area be supplied, in part, by power from Paddy's Run. Thus, from Staff Exhibit 48, the sale to the municipality of Paoli would be jurisdictional, and sales to the following REMC's would be jurisdictional: Davies-Martin Co., Dubois R.E.C., Inc., Harrison Co., Knox Co., and Orange Co. Similarly, based on Staff Exhibit 51 showing supply from Miami Fort up to the substations at Columbus, Five Points, Connersville, and Madison, the following municipalities are jurisdictional: Vevay, Rising Sun, Greendale & Lawrenceburg, and Rushville. And sales to the following REMC's are jurisdictional: Decatur Co., Fayette-Union Co., Rush Co., Shelley Co., and Southeastern Ind.

From the record it would appear that further jurisdictional sales might be established for the central region of PSCI's system, up to Wabash River and up to Noblesville; however, the record does not permit any conclusions on this matter. It further appears that sales in the area above Wabash River and Indianapolis could never be considered to receive energy generated in

another State. In any event there is no evidence which would support a conclusion that out-of-state energy is present in any of the sales for resales other than those listed above. The proceeding should be remanded for more complete evidence that out-of-state energy reached points beyond the above-mentioned stations.

VI.

Finally, I note my specific disagreement with the denial of oral argument in this proceeding. Certainly the fact that long briefs may have been prepared in this proceeding does not foreclose the necessity of a full discussion of the complex issues involved. Innumerable policy issues arise in any jurisdictional dispute, and this is particularly the case where our jurisdiction is dependent upon a showing of out-of-state energy reaching each of the wholesale purchasers. On this issue the complex engineering problems raise more questions than they provide answers. Furthermore, PSCI presents for the first time a clear case involving the separation of powers in federal-state relations, and it thus raises the central issue reserved by almost all such electric companies in the response to our list of public utilities issued in July, 1963. Repeated requests for oral argument should compel our efforts to perform an important service function as well as permit to the parties an opportunity to a hearing on the complex questions now before us.

INITIAL DECISION
OF THE PRESIDING EXAMINER DETERMINING JURISDICTION

(Issued June 16, 1965)

RENDELMAN, *Presiding Examiner:* This proceeding was initiated by an order of the Federal Power Commission dated May 1, 1964, 31 FPC 1064, directing that an investigation be instituted and that a public hearing be held to find and determine:

(1) Whether the sales by Public Service Company of Indiana, Inc. (PSCI) to Municipal Electric Systems (Municipals) and Rural Electric Membership Cooperatives (REMCs)[1] within the State of Indiana are sales at wholesale in interstate commerce, subject to the provisions of Sections 201, 205, and 206 of the Federal Power Act and Part 35 of the Commission's Regulations thereunder;

(2) Whether Public Service Company of Indiana, Inc. should be ordered to file rate schedules for service to such purchasers in accordance with the provisions and requirements of Section 205 of the Act and Part 35 of the Commission Regulations thereunder;

(3) Whether other orders or other actions may be necessary and appropriate to bring about compliance with the Federal Power Act and the Commission's Regulations thereunder.

The hearing herein commenced on November 9, 1964, and after appropriate recesses for preparation of answering and rebuttal testimony, with further hearing sessions for cross-examination thereon, was concluded on December 15, 1964. Briefs were thereafter filed by the parties. Following issuance of Commission Opinion No. 458, *Indiana & Michigan Electric Co.*, Docket No. E-7089, on April 14, 1965, 34 FPC 739, which bears directly on the issues concerned in this proceeding, the Presiding Examiner, by order dated April 19, 1965, afforded the parties an opportunity to file supplementary briefs.

[1] A complete list of the Municipals and REMCs herein concerned appears as Exhibit A to the Commission's order of May 1, 1964, *supra*, p. 1070.

PSCI thereafter filed such brief. Staff counsel did not file a supplementary brief but responded to PSCI's supplementary brief.

PSCI is an Indiana corporation with its principal business office at Plainfield, Indiana. It conducts operations wholly within the State of Indiana in the North Central, Central, and South Central parts of the State from the Illinois boundary to the Ohio boundary (exclusive of Indianapolis and Marion counties and a small adjacent territory). In all, PSCI does business in 69 of the State's 92 counties. The company serves none of the larger municipalities of Indiana, but does serve the smaller cities such as Terre Haute, Kokomo, Lafayette, Bloomington, and New Albany, in addition to large rural areas.

PSCI owns and operates five steam generating plants, having a net assured generating capacity of 1,466,000 kw interconnected by a network of 495 miles of 220 kv lines, 1,355 miles of 138 kv lines and 1,984 miles of 69 kv lines which makes it possible to readily transmit large blocks of power to all parts of the system. PSCI is also interconnected within the State of Indiana with Indianapolis Power and Electric Company, Northern Indiana Public Service Corporation and Southern Indiana Gas and Electric Company, all of which similarly serve areas only within the state, and with Indiana & Michigan Electric Company which operates in Indiana and Michigan and is one of the six operating subsidiary companies comprising the seven-state American Electric Company System which have been integrated into a single power network. PSCI is also interconnected at the state line with Louisville Gas and Electric Company which operates in Kentucky and the Cincinnati Gas & Electric Company which operates in Ohio. PSCI is tied to these investor-owned utilities at 17 interconnection points and operates synchronously and continuously with them, as well as with other members of the Interconnected Systems Group. However, PSCI neither buys from, nor sells firm energy to, these six interconnected companies. Its transactions with them are limited to the interchange of emergency and economy energy and the transfer of energy over its transmission system.

During 1963, PSCI generated a total of 6,945,324,400 kwh of which a total of 6,294,877,000 [2] kwh were distributed. Of the total distribution, 4,970,835,385 kwh were sold to 389,770 retail customers and 1,324,041,615 kwh, or 21 percent of the total distribution, to 31 REMCs and 46 municipals. In that year PSCI's total energy revenues amounted to $112,011,899, of which $12,311,081 or 10.99 percent devolved from sales to REMCs and municipals. The record shows that in each of the several years prior to 1963, sales to REMCs and municipals remained fairly constant at approximately 11 percent of total revenues.[3]

It is PSCI's position that before Commission jurisdiction over sales at wholesale can be determined, it must be proven that such sales are (1) sales of electric energy in interstate commerce (2) sales over transmission facilities and not over facilities used in local distribution and (3) sales at wholesale for resale.

In the recent case of *Indiana & Michigan Electric Company, supra*, the Commission stated that "where a public utility participates in and is dependent upon an integrated interstate power pool, all of its wholesale sales for resale are subject to the jurisdiction of the Commission." In connection with whether the sales herein concerned are sales in interstate commerce, PSCI readily admits its status as a public utility and that it "has bought and sold limited amounts of energy from out of state sources for a number of

[2] Total distribution less line loss, less own use.
[3] 1962—10.9%; 1961—10.87%; 1960—11.36%; 1959—11.12%.

years." The company urges, however, that its "status as a public utility does not decide the question whether the Federal Power Commission may assert jurisdiction over * * * rates, *F.P.C.* v. *Southern California Edison*, 376 U.S. 205, 208, n. 3," but that Staff must go further and "demonstrate * * * that any of the outside energy coming into PSCI's system finds its way to the REMC or municipal customers."

PSCI, moreover, contends that unlike the Indiana & Michigan Company, it "is not an integral part of any multistate system operated as a single unit." The evidence, however, definitely is to the contrary. PSCI admits that it purchases and sells energy from out of state sources; that its interconnections with the six investor-owned utilities to which it is tied have remained closed (to permit continuous operation) for more than 18 years; and that these interconnected utilities each continually coordinate their operations with the others so that the energy produced from each system's own generators plus the energy received from, or transmitted to, interconnected systems will be sufficient to meet all system loads at a frequency of 60 cycles. Thus, during normal operations, PSCI must supply the loads on its own system plus the net of scheduled deliveries and receipts of energy to and from other systems with whom PSCI has scheduled transfers of energy, whether directly connected or not. These interchanges of energy, and its own generation, is measured by PSCI at all interconnections. The quantities are then telemetered to the central load supervisor's office in Plainfield where PSCI's own generation is adjusted to the scheduled net interconnection transfers. PSCI's interconnected companies, and all 140 members of the interconnected systems group which includes PSCI, operate in similar fashion, *i.e.*, each schedules sufficient generation to meet its own load plus net interconnection schedules. It must also be noted that electric systems such as PSCI exercise no control over the actual transfers of energy at any particular connection. The flow of energy is always in the direction of the load and the only control exercised by the company is the net of the transfers over its tie lines into and out of its own system.

It is unnecessary to further itemize in detail the additional features which definitely categorize PSCI as an operating member of an interstate integrated power pool. It is not denied that power flows freely over interconnected tie lines and that the actual flows are controlled by the characteristics of the entire interconnected multistate network; that all members of this network, of which PSCI is a member, operate in synchronism, and for purposes of operating efficiency, attempt to maintain as close to a frequency of 60 cycles as is possible in order to keep the system load and generation in balance; that PSCI's generators, as all generators in a multistate network, are interlocked electromagnetically; and that a change in load is reflected by a change in the amount of energy produced by every generator in the system.

The basic facts are that transfers of energy by PSCI and its interconnected electric systems occur because of the uncontrolled free flow characteristics of electric networks, because of schedule transactions between PSCI and other connected electric systems and because of schedule transactions between other systems and the systems to which PSCI is connected. These operating characteristics make no other conclusion possible, but that PSCI is an operating member of an integrated interstate power pool.

The further point is made that even if it is found that PSCI is part of an integrated interstate power pool, Federal Power Commission jurisdiction cannot attach unless it is also shown "by engineering and scientific evidence

that out-of-state energy reaches a single municipal or REMC customer of PSCI's." PSCI argues that such proof can only be established by the introduction of tracing studies.

Staff witness, Dr. Jessel, has testified that it would be wholly impracticable to apply the tracing method to the PSCI system mainly because of the lack of a sufficient number of recording meters on the PSCI system, and that even if such tracing study could be performed, it would take from one to two years. Furthermore, states Dr. Jessel, such study would be wholly impractical and by the time it was completed would prove worthless, since conditions in all probability would have changed during that period. Respondent's allegation to the effect that even if such tracing study is impossible of performance, the burden of proving the sale of out-of-state energy at wholesale by that method nevertheless still rests with the Commission is, to say the least, not persuasive.

In any case, the Commission in the *Indiana & Michigan* case, *supra*, has, for the intent and purpose here concerned, decided this issue. From the physical evidence therein adduced the Commission concluded that out-of-state energy received into the system of a utility company, operated as part of an integrated power pool commingles with that company's own generation and permeates its entire system. Therefore, just as the Commission therein concluded that energy generated outside Indiana and Michigan "pervades Indiana & Michigan's facilities and is delivered to those portions of Indiana & Michigan's system serving the municipals and cooperatives," so is that conclusion also warranted on the almost identical facts in the instant case.

PSCI points to the fact that it is wholly self sufficient and capable of supplying its total load even at peak periods and that unlike Indiana & Michigan, has no corporate affiliations with any other company. Assuming that PSCI is individually capable of supplying its total load at all times, the fact still remains, as the Commission noted with reference to the Indiana & Michigan Co., that PSCI just does not operate that way. The only operating difference between PSCI and Indiana & Michigan, insofar as pool operations are concerned, is one of degree. Admittedly, the Indiana & Michigan Co.'s interstate operations are conducted on a larger scale than are PSCI's but this does not gainsay the fact that PSCI nevertheless operates as a participating member of an integrated interstate power pool for the purpose of obtaining the benefits of such operation. That PSCI has no corporate affiliations with any of its interconnected companies is immaterial. Each of its wholesale sales for resale here in issue is a pool sale and, in the light of the interstate nature of the pool, such sales are in interstate commerce and subject to Sections 201, 205 and 206 of the Act. The "Commission has complete authority to regulate all of this commingled power flow," *Pennsylvania Water & Power Co.* v. *Federal Power Commission*, 343 U.S. 414.

PSCI asserts that in 1963 it purchased only one-tenth of one percent of its total energy requirements from out of state, whereas Staff alleges that in that year PSCI received 5.5 percent of its total net generation from Louisville Gas & Electric Co. and Cincinnati Gas & Electric Co. Regardless of which percentage is correct, or whether the exact quantity lies somewhere in between, the Supreme Court in *Conn. Light & Power Co.* v. *F.P.C.*, 324 U.S. 515, 535, 536 unqualifiedly disposed of any argument with respect to the quantity of out of state energy necessary to confer jurisdiction on the Federal Power Commission when it therein stated:

> It is contended that the volume of energy passing over certain of these facilities is insignificant in proportion to the total. Only about one-fifth

> of one percent of all the energy received and generated by the Company throughout the State of Connecticut was transmitted out of the state during the time of the connection of Fishers Island with the Borough of Groton. Congress appears to have left to the Commission's sound administrative discretion to determine whether or not to assert its authority in such situations. * * * We do not find that Congress has conditioned the jurisdiction of the Commission upon any particular volume or proportion of interstate energy involved. * * *

There are additional factors which demonstrate the benefits derived by PSCI from its interconnections with other utilities for its everyday operations. The evidence shows that PSCI achieves a 5 percent "spinning reserve" over its daily peak period capacity solely by means of its interconnections. This spinning reserve, should conditions warrant, would enable PSCI to operate its own generators at top capacity in reliance upon the fact that there is additional capacity available from its interconnected companies in the event of a generator or transmission line outage, or sudden increase in system load.

PSCI, as did the Indiana & Michigan Company, urges that Staff has not sustained the burden of proving that sales to municipals and REMCs are affected otherwise than by the use of facilities used in local distribution. It is argued that Commission jurisdiction does not in any case attach to sales to REMCs, which are cooperative non-profit organizations, because such sales are at retail to ultimate consumers inasmuch as the REMCs merely act as the joint agent of its members.

The Commission's disposition of the local distribution argument in the *Indiana & Michigan* case appears equally applicable here. The Commission therein stated, *supra*, p. 748.

> Even on its own terms IM's local distribution argument is essentially that the lower voltage lines over which it ultimately delivers power to the facilities owned and operated by at least some of its municipal and cooperative customers are also used for direct retail sales to certain of IM's industrial, commercial or residential customers; therefore these lines are local distribution facilities. There are at least two answers to this contention. First it cannot be suggested that the only IM facilities involved in the sales to their municipal and cooperative wholesale customers are the ultimate lines leading directly to the connection with the facilities of the customers; obviously many other clearly jurisdictional facilities are also involved in the sale. See *Hartford Electric Light Co.* v. *F.P.C.*, 131 F. 2d 955 (CA2), certiorari denied 319 U.S. 471. Second, as the Supreme Court expressly noted in the *Colton* case, *supra*, at p. 210, note 6, the fact that a company may make a few direct sales off a line transmitting power to a wholesale customer does not convert the line into local distribution facilities. As the Court of Appeals stated in *Wisconsin Michigan Power Co.* v. *F.P.C.*, 197 F. 2d 472, 477, certiorari denied 345 U.S. 934: "at no point before delivery (to a wholesaler) has been completed, has interstate transmission terminated" and "there is no ground for the position that local distribution includes any transmission occurring before the wholesaler who sells at retail is reached."

Thus, there would appear to be nothing in the Federal Power Act which makes Commission jurisdiction over wholesale sales dependent upon the type of facilities used to bring the energy to the place of sale. Under the present state of the law as interpreted by the Commission, it would appear that the

general rule is that all wholesale sales for resale in interstate commerce by a public utility are subject to Sections 205 and 206 of the Act.

There is also little merit to PSCI's argument that sales to REMCs are not sales at wholesale for resale. The facts are that the Commission herein is asserting jurisdiction over sales by PSCI to the REMCs not sales by the REMCs to its members. The REMCs sell the energy purchased to its members at a price over and above that paid to PSCI. The Commission has adopted the view that a cooperative corporation, as any other privately owned corporation, is an entity separate and apart from its members. The following statement from *Hartford Electric Light Co.* v. *F.P.C.*, 131 F. 2d 953, 958, cert. den. 319 U.S. 741, bears directly on this issue:

> * * * The Exchange arrangements result in resales, whether they be regarded as sales to the Exchange [footnote omitted] and resales by the Exchange, or as sales by the Exchange as agent for the members, or an agency whereby each member acts as agent for the others in selling the energy supplied by the others. * * * There can be no doubt that petitioner is making sales at wholesale, as that term is defined in the Act.

Wholesale sales to cooperatives moreover, are covered by Sections 3(4) and 201(d) of the Act. Section 201(d) defines "the sale of electric energy" as "a sale of electric energy to any person for resale." Section 3(4) states that a "person" means an individual or a corporation, *United States* v. *Public Utilities Commission of the State of California*, 345 U.S. 295, 312. Each of the cooperatives concerned in this proceeding to whom sales are made by PSCI is an Indiana corporation which resells the energy purchased from PSCI and such wholesale sales for resale are therefore within the statute. The final word on the subject appears in the Commission's recent opinion in *Wisconsin Michigan Power Company*, Opinion No. 432, issued June 9, 1964, 31 FPC 1445 at p. 1451:

> The Company also seeks to defend the existing differences in rates by a challenge to our jurisdiction, which is plainly without merit. In substance Wis-Mich argues that the Commission lacks jurisdiction to determine discrimination as between jurisdictional rates to the Cities and allegedly non-jurisdictional rates to the co-ops, at least until the Commission has decided in a pending case whether electric cooperatives are subject to its rate-making jurisdiction.[9] The short answer is that we regulate sales of power at wholesale in interstate commerce and not purchases. It is Wis-Mich that we are here regulating and not the cooperative.

ADDITIONAL FINDINGS AND CONCLUSIONS

Upon consideration of the entire record in this proceeding, including the pleadings, the evidence adduced and the briefs filed, it has been found and concluded, in addition to the findings and conclusions heretofore stated that:

(1) Public Service Company of Indiana, Inc. (PSCI) is a corporation organized and existing under the laws of the State of Indiana with its principal business office at Plainfield, Indiana.

(2) PSCI owns and operates facilities, among others, for the transmission and sale at wholesale of electric energy which is transmitted between the States of Indiana, Ohio and Kentucky and consumed outside the State in which it is generated, all of which facilities are in addition to and do not include facilities used for the generation of electric energy, facilities used in local

[9] *Dairyland Power Cooperative, et al.* (FPC Docket No. E-7173).

distribution or only for the transmission of electric energy in intrastate commerce, or facilities for the transmission of electric energy consumed wholly by the transmitter.

(3) PSCI is a public utility within the meaning of that term as used in the Federal Power Act.

(4) PSCI is directly interconnected with Louisville Gas & Electric Company in Kentucky, The Cincinnati Gas & Electric Company in Ohio, and within the State of Indiana with Indianapolis Power & Light Company, Southern Indiana Gas and Electric Company, Northern Indiana Public Service Company, and Indiana & Michigan Electric Company. PSCI operates continuously in synchronism with the aforesaid six companies and other electric systems in Illinois, Ohio, Kentucky, West Virginia, Virginia, North Carolina, Georgia, Alabama, and Mississippi which are also members of the Interconnected Systems Group.

(5) PSCI is located in the midst of a large power pool and by means of its high capacity interconnections at all times operates its system as part of a coordinated multistate electric network.

(6) PSCI's municipal customers and Rural Electric Municipal Cooperative customers are those listed in Exhibit A to the Commission's order of May 1, 1964.

(7) At times, each delivery point to PSCI's municipal and cooperative customers receives out-of-state energy from a coordinated multistate power network which is commingled with energy generated within the State of Indiana.

(8) Each sale for resale by PSCI to the aforesaid municipal and cooperative customers is a pool sale from a coordinated multistate electric network, and hence, in light of the interstate nature of the pool is a sale in interstate commerce.

(9) Each of the sales by PSCI to the municipalities and cooperatives referred to in the Commission's order of May 1, 1964, is a sale of wholesale for resale in interstate commerce within the meaning of Sections 201, 205, and 206 of the Federal Power Act.

(10) The facilities used by PSCI to complete the transmission and sale of interstate energy to its municipal and REMC customers are not local distribution facilities within the meaning of Section 201(b) of the Federal Power Act.

(11) PSCI has not filed rate schedules for service to its municipal and REMC customers. PSCI therefore has been and is continuing to violate the provisions of Section 205 of the Federal Power Act and Part 35 of the Commission's Regulations promulgated thereunder.

(12) PSCI has not posted any of the rate schedules which it has submitted for filing under the Federal Power Act. PSCI therefore has been and is continuing to violate the provisions of Section 205(c) of the Federal Power Act and of Section 35.2(d) of the Regulations promulgated thereunder.

(13) PSCI should, therefore, be ordered to file with the Commission its rates and charges for services to its municipal and REMC customers including the classifications, practices, and regulations affecting such rates and charges, together with all contracts which in any manner affect or relate to such rates, charges, classifications, and services pursuant to the provisions of Section 205 of the Federal Power Act and the Regulations promulgated thereunder.

(14) PSCI should therefore be ordered to comply with the posting requirements as set forth in Section 205(c) of the Federal Power Act and in Section 35.2(d) of the Regulations promulgated thereunder.

312-270—69——100

ORDER

WHEREFORE, *It is ordered*, subject to review by the Commission:

Within 30 days after this order becomes the final act of the Commission, Public Service Company of Indiana, Inc. shall file in accordance with Part 35 of the Commission's Regulations and Section 205 of the Federal Power Act its contracts with each of its municipal and Rural Electric Municipal Cooperative customers as its rate schedules for its sales at wholesale of electric energy to those customers. Such rate schedules shall remain effective until and unless superseded by a change filed pursuant to Section 205(d) of the Act and Section 35.3(c) of the Regulations thereunder, or changed pursuant to order of this Commission.

MARTIN E. RENDELMAN,
Presiding Examiner.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

MALCOLM S. STEVENSON, PROJECT NO. 2502

ORDER DISMISSING APPLICATION FOR PRELIMINARY PERMIT

(Issued December 22, 1965)

On December 15, 1964, Malcolm S. Stevenson, 31 Central Street, Bangor, Maine, filed an application with the Federal Power Commission seeking a preliminary permit for the proposed Cross Rock Hydroelectric project, FPC Project No. 2502, to be located on the St. John River in Aroostook and Piscataquis Counties, Maine and in the Province of Quebec, Canada. Public notice of this application was issued on March 5, 1965. Reports on this application was requested from various state and federal agencies as well as from the International Joint Commission.

This proposed project would be located on the St. John River immediately downstream from its confluence with the Allagash River and some 290 miles from its mouth at the Atlantic Ocean.

On May 26, 1965, the Department of the Interior reported on this application and among other things stated:

> * * * legislation is pending in the Senate and House of Representatives and is also under consideration within the Executive Branch for construction of a project at Dickey, Maine, upstream from the confluence of the Allagash and Saint John River. The proposed Cross Rock project also would inundate this site.

On October 27, 1965, Congress enacted Public law 298 which among other things authorized the Dickey-Lincoln School project on the Saint John River. Since the site of the Dickey dam and reservoir would be inundated by the proposed Cross Rock project, the two projects are incompatible and mutually exclusive. In light of the specific Congressional authorization for the Dickey-Lincoln School project it would be inappropriate and inconsistent for this Commission to continue its consideration of the application for preliminary permit for the proposed Cross Rock project. See *Savannah River Electric Co.* v. *F.P.C.*, 164 F. 2d 408 (CA4).

The Commission's proceeding on this application should therefore be terminated and the application should be dismissed.

The Commission finds:

Under the circumstances recited above it is appropriate and in the public interest that the application of Malcolm S. Stevenson for a preliminary permit for the proposed Cross Rock project be dismissed.

The Commission orders:

The application of Malcolm S. Stevenson for a preliminary permit for the Cross Rock project, Project No. 2502, is hereby dismissed.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

MICHIGAN WISCONSIN PIPE LINE COMPANY, DOCKET NO. CP66-65

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued December 23, 1965)

Michigan Wisconsin Pipe Line Company (Michigan Wisconsin) filed an application on August 26, 1965 in Docket No. CP66-65 for a certificate of public convenience and necessity under Section 7(c) of the Natural Gas Act to acquire by merger and operate the facilities of American Louisiana Pipe Line Company (American Louisiana), all as more fully set forth in the application. Michigan Wisconsin and American Louisiana are both wholly owned subsidiaries of American Natural Gas Company.

Michigan Wisconsin proposes to acquire all the assets and liabilities of American Louisiana and will perform all acts, make all sales and render all services now being performed by and required of American Louisiana under outstanding certificates issued by the Commission. Upon consumption of the merger and the securing of all necessary regulatory approvals, the surviving corporation, Michigan Wisconsin having its principal place of business in Detroit, Michigan, will make all sales and will render all services presently being performed by the two corporations. American Louisiana, having been divested of all legal rights and responsibilities, presumably will be dissolved; at least it will no longer be a "natural-gas company" as defined in Section 2 of the Natural Gas Act. The sales contracts and tariffs of Michigan Wisconsin and American Louisiana will be adopted by the surviving corporation, which will carry out the obligations of both companies under their respective rate filings and settlement agreements.

Applicant has indicated its desire to have the merger take place as soon as possible. The merger has been recommended by the Public Service Commissions of the States of Michigan and Wisconsin, and the County of Wayne, Michigan. Approval by the Securities and Exchange Commission will be sought following the Commission's authorization. The certificate herein issued will be conditioned thereon.

Michigan Wisconsin commenced operations in 1949. In 1953 when the American Natural Gas system required an increased gas supply it was determined that this supply could best be obtained through the construction of a new line from the Louisiana Gulf Coast. Under Michigan Wisconsin's mortgage only 60% of the cost of constructing such a new line could be financed through the sale of Michigan Wisconsin bonds whereas a newly formed company could finance 75% of the initial cost by sale of bonds.

Since the initial cost of the American Louisiana pipeline was approximately $130,000,000, bonding at 75% rather than 60% permitted the issuance of an additional $19,500,000 of bonds. Additionally, the American Natural System desired to avoid any possibility of escalating the pricing provisions in then-existing gas purchase contracts. The indeterminate escalator provisions have recently been eliminated and there are a number of reasons hereinafter discussed why the customers of both companies and the public will benefit by this proposed merger.

In general, the proposal provides for the merger of American Louisiana into Michigan Wisconsin effective January 1, 1966, whereupon Michigan Wisconsin will succeed to all the rights and properties of American Louisiana and will assume all its liabilities and duties. American Louisiana's 205,000 shares of $100 par value common stock now issued and outstanding and held by American Natural Gas Company will be converted into an equal number of Michigan Wisconsin shares of $100 par value common stock and American Louisiana's First Mortgage Pipe Line Bonds in the amount of $68,000,000 4¼% Series due 1976, will be exchanged for an equivalent amount of Michigan Wisconsin's First Mortgage Pipe Line Bonds. The Mutual Life Insurance Company of New York and the Metropolitan Life Insurance Company, holders of all of the American Louisiana outstanding bonds, have consented to the exchange of bonds with the same interest rate, final maturity date and redemption prices.

With respect to the tariff of the merged company, the proposal involves the inclusion of an additional rate schedule in Michigan Wisconsin's tariff and also the incorporation of certain more liberal provisions into Michigan Wisconsin's small general service rate schedule. The additional rate schedule, which will be available to all customers on an optional basis, provides for 365-day firm service (compared to 190-day firm service in Michigan Wisconsin's presently effective rate schedule) and is designed to give more flexibility to the customer companies when contracting for gas supplies. The proposed demand and commodity rates of $2.88 per month and 27.65¢ per Mcf, respectively, are designed to recover the cost of American Louisiana gas which would be part of the merged system and, accordingly, reflect American Louisiana's cost of service, including a 6% rate of return, for the calendar year 1964 annualized for known changes.

American Louisiana presently has outstanding $29,000,000 of short-term bank loans which must be permanently financed early in 1966. This financing requirement, coupled with financing that will be required in connection with a 1966 expansion program involving approximately $75,000,000, would necessitate the issuance by American Louisiana of some $10,000,000 in common stock during 1966. If, however, this imminent financing is done on a merged basis, it is contemplated that all of the funds required can be obtained through the issuance of debt securities. This is possible because of Michigan Wisconsin's high equity ration of approximately 40% in contrast to American Louisiana's much lower equity ratio of approximately 25% Since common stock equity capital costs the consumer approximately 20% (10% after income taxes) and debt capital presently costs about 5%, the ability to sell the additional debt on a merged basis results in ultimate estimated savings of approximately $1,500,000 per year.

In addition to the fact that substantially more debt can be sold on a merged basis as noted above, it is Applicant's opinion that any debt sold over the

years will be less costly on a merged basis. With respect to the 1966 bond issue alone, Applicant estimates that the cost would be at least .125% lower on a merged basis and that the resultant interest savings on the single bond issue contemplated within the next few months would be approximately $450,000.

Customer companies of both pipelines will have complete flexibility in contracting for their requirements after the merger. Under Michigan Wisconsin's presently effective tariff, each customer has a firm annual entitlement of 190 times the Maximum Daily Quantity. This annual limitation, which is required to assure summer gas for storage, fits within the load requirements of most customers on the Michigan Wisconsin system; however, a number of customers have an immediate requirement for additional firm annual gas in addition to the 190 days' use of the MDQ. North Central Public Service Co., Wisconsin Fuel and Light Company, Wisconsin Michigan Power Company, Allerton Gas Company and Michigan Gas and Electric Company will have a need to purchase a portion of their requirements under the new rate schedule, which will be for high priority industrial service and none will be used for boiler fuel. These companies have had to rely upon the availability of annual overrun gas to meet their industrial commitments during the last several years. In the future, it is probable that other customers will desire to purchase some portion of their requirements under the new rate schedule. The cost of gas under the new rate schedule will be approximately 36.9¢, while the presently effective firm rate under Michigan Wisconsin's ACQ–1 rate schedule is 41.96¢. After the merger, customers of the merged system will have the opportunity to buy all the 365-day gas they desire and their proportionate share of all available overrun. As a result, every customer will be placed in exactly the same position when contracting for gas from the integrated pipe line system.

The general availability of the 365-day rate schedule will make possible the sale by distributing company customers of a more assured type of industrial service which will result in greater sales. These additional sales, coupled with the better price that a more assured type service can command, will benefit the residential consumers since most of the customers are located in states whose regulatory commissions require crediting the revenues from industrial sales to the cost of service for rate making purposes. This benefit is in addition to the prospects of avoiding future cost increases as discussed above.

Consummation of the merger will make possible operating savings and economies of $300,000 to $400,000 per year because of larger and fewer securities issued, better utilization of the total cash resources of both companies, further consolidation of departmental activities with a resultant reduction in cost, elimination of duplication in accounting and reporting, and simplification of regulatory proceedings and reduction in number of applications to be filed and processed.

Although there are certain immediate rate reductions inherent in Michigan Wisconsin's application (decrease in the average cost for customers purchasing 365-day gas; reduction in American Louisiana's small general service rate from 45¢ to Michigan Wisconsin's comparable 44.7¢ rate and reduction in Michigan Wisconsin's development rate from 44.7¢ to 43¢), operation on a merger basis indicates that a further overall reduction of approximately $500,000 would be appropriate. Although Michigan Wisconsin contends that such a reduction necessarily would be in anticipation of economies and savings

resulting from the merger, Michigan Wisconsin has stated that a certificate conditioned to require the following further reduction would be acceptable:

Rate Schedule ACQ–1 (Reduction of 2 cents per month per Mcf of billing demand)	$308, 186
Rate Schedule MDQ–1 (Reduction of 4 cents per month per Mcf of billing demand)	187, 368
Rate Schedule SGS–1 (Reduction of 0.1 cent per Mcf delivered)	4, 704
	$500,258

Approval of merger application as filed is conditioned on the filing by Michigan Wisconsin of the following reduced rates, representing a reduction of approximately one-half million dollars annually:

	Demand	*Commodity*
Rate Schedule ACQ–1	$3. 00	27. 65 cents
Rate Schedule MDQ–1	2. 84	27. 65
Rate Schedule SGS–1	------	44. 6

Due notice of the application was published in the Federal Register on September 9, 1965 (30 F.R. 11571).

Notices or petitions to intervene were filed by Wisconsin Fuel and Light Company, Wisconsin Power & Light Company, Northern Indiana Public Service Company, Wisconsin Public Service Corporation, St. Joseph Light & Power Company, the Public Service Commission of Wisconsin, Wisconsin Michigan Power Company, Wisconsin Natural Gas Company, Iowa Electric Light and Power Company, North Central Public Service Co., Iowa Southern Utilities Company, Madison Gas and Electric Company, The County of Wayne, Michigan, Milwaukee Gas Light Company, Ohio Valley Gas Corporation, Michigan Gas and Electric Company, American Gas Company, Michigan Gas Utilities Company, American Louisiana Pipe Line Company, Lincoln Natural Gas Company, Inc., Michigan Consolidated Gas Company and Illinois Power Company. Three public bodies, the state public service commissions of Wisconsin and Michigan, and the County of Wayne, Michigan support the proposed merger. None of the intervenors oppose the merger. A formal hearing was not requested by any party.

At a hearing held on December 22, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application of Michigan Wisconsin, its supplemental application, and the data submitted to the Commission staff by letter of October 25, 1965, all such items having been submitted in support of the authorization sought, and upon consideration thereof the Commission finds that a certificate should be issued as hereinafter ordered and conditioned.

The Commission further finds:

(1) Applicant, Michigan Wisconsin Pipe Line Company, a Delaware Corporation having its principal place of business in Detroit, Michigan, is a "natural-gas company" within the meaning of the Natural Gas Act, as hereinbefore found by the Commission in its order of November 30, 1946, in Docket No. G-669 (5 FPC 953).

(2) American Louisiana Pipe Line Company, a Delaware corporation having its principal place of business in Detroit, Michigan, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its opinion and order issued October 1, 1954, in Docket No. G–2306, *et al.* (13 FPC 380).

(3) The proposed merger and operation of American Louisiana's facilities, as hereinbefore described and as more fully described in the application in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(4) The sales of natural gas made from and other services rendered by the facilities to be acquired from American Louisiana will be in interstate commerce, subject to the jurisdiction of the Commission, and are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(5) The aforesaid merger and operation of facilities are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(6) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(7) The conditions attached to the certificates herein issued are required by the public convenience and necessity.

The Commission orders:

(A) A certificate of public convenience and necessity is hereby issued, upon the terms and conditions of this order and subject to all provisions of the Natural Gas Act and the Commission's Regulations thereunder, authorizing Michigan Wisconsin Pipe Line Company to acquire and operate all of the natural gas facilities of American Louisiana Pipe Line Company subject to the jurisdiction of the Commission, as more fully described in Michigan Wisconsin's application in Docket No. CP66-65.

(B) The name of Michigan Wisconsin Pipe Line Company be and the same is hereby substituted, effective as of the date of consummation of the merger for that of American Louisiana Pipe Line Company in all certificate and other authorizations heretofore issued pursuant to the Natural Gas Act by this Commission to the respective companies.

(C) The certificate issued by paragraph (A) above, and the amendments to the certificates effected by paragraph (B) above, and all rights granted thereunder are conditioned upon applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (d) (1), (d) (2) and (e) of Section 157.20 of the Commission's Regulations under the Natural Gas Act.

(D) The certificate issued by paragraph (A) above is hereby conditioned upon the actual exchange of American Louisiana's $68,000,000 4¼% Series due 1976 bonds for an equal amount of Michigan Wisconsin bonds having the same rate of interest and being identical in all other material aspects, all as heretofore set out, and more fully described in the applications and evidence in this case.

(E) Michigan Wisconsin will file the appropriate tariffs to effect the rate reductions heretofore described.

(F) Michigan Wisconsin shall cause to be substituted, as appropriate, the present tariff filings of American Louisiana and to make available to the present customers of American Louisiana all of its present and proposed rate schedules and services.

(G) The effectiveness of the certificates issued and amended by paragraphs (A) and (B) above is conditioned upon the applicant's first obtaining the necessary approval from the Securities and Exchange Commission.

(H) The certificate issued in paragraph (A) above shall be accepted in writing and under oath by the applicant within 30 days of the date of issuance of this order; upon consummation of the merger applicant shall, within 10 days thereof, report such fact to the Commission, together with the effective date thereof.

(I) The certificates herein issued and amended are not transferable and shall be effective only so long as the applicant continues the acts and operations hereby authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations and orders of the Commission.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

GEORGE MITCHELL & ASSOCIATES, INC., AGENT, DOCKET NOS. RI61-239 AND RI64-404

ORDER GRANTING MOTION FOR PARTIAL RELEASE OF TRUST FUNDS

(Issued December 27, 1965)

The above-named respondent (movant) on August 16, 1965, as amended on November 18, 1965, filed a motion requesting that CM & M Products Plant, Inc. (CM & M) be permitted to file an agreement and undertaking covering its interest in the above-entitled proceedings, and that all amounts previously deposited under escrow agreements applicable to its interest therein be released. In support thereof, CM & M submitted financial data to justify the request. Movant also requests that all amounts attributable to the interest of Mitchell & Mitchell Gas & Oil Corporation (M & M) below the area increased rate ceiling of 14.5¢ per Mcf inclusive of the applicable contract allowance of .25¢ per Mcf for dehydration be released from said escrow agreements subject to the corporate undertaking of M & M.[1] Movant further requests that M & M be permitted to file a surety bond to assure refunds with respect to any amounts collected above 14.5¢ per Mcf, inclusive of the contract charge for dehydration, applicable to its interest in the above-entitled proceedings in lieu of the existing escrow agreements.

Docket No. RI61-239 involves a rate increase from 140.3¢[2] to 15.09¢[2] per Mcf at 14.65 psia, designated as Supplement No. 29 to movant's FPC Gas Rate Schedule No. 19, for the sale of gas by movant to Natural Gas Pipeline Company of America (Natural) from Railroad District No. 10, which was placed in effect subject to refund under an escrow agreement as of May 27, 1961. Docket No. RI64-404 involves a rate increase from 15.09¢[2] to 16.120¢[2] per Mcf for the same sale, designated as Supplement No. 31, which was placed in effect subject to refund under an escrow agreement as of May 27, 1964. Both of the escrow agreements are with The Chase Manhattan Bank of New York (Chase).

Movant proposes herein only the release of those amounts deposited in escrow which relate to the interests of M & M and CM & M. The escrow agreements will thus remain in effect as to the other interests covered by the

---

[1] Concurrently with the motion M & M and CM & M have tendered agreements and undertakings.

[2] Includes 0.25¢ per Mcf allowance for dehydration paid by buyer, which seller, in turn, pays a third party for dehydrating the gas, and an upward Btu adjustment for gas over 1,000 Btu charged by seller.

rate increases of movant involved here. As of September 30, 1965, according to movant, $1,871,908.49 has been deposited with Chase under the subject escrow agreements. Of this amount approximately $347,717.33 is attributable to the interest of CM & M and approximately $359,830.21 is attributable to the interest of M & M. The remainder is attributable to the other working interest owners and to royalty and overriding royalty interests. With respect to M & M's proposed surety bond, movant advises that $210,895.52 has been collected by M & M in excess of 14.25¢ per Mcf in the subject proceedings.

Based on the financial data submitted, the agreement and undertaking tendered by CM & M appears to be satisfactory and will be accepted for filing as hereinafter ordered. We shall also accept the agreement and undertaking of M & M insofar as it relates to amounts collected below 14.5¢ per Mcf, inclusive of the applicable allowances for dehydration, and shall require a surety bond in the amount of $210,000. Movant's proposal insofar as it relates to M & M is consistent with the action taken by us in an order issued June 16, 1965, 33 FPC 1265, in *Dorchester Gas Production Company*, Docket No. G–18671, where we permitted Dorchester, without submitting financial data, to file an agreement and undertaking to assure refund of any excess charges that might be determined in that proceeding with respect to amounts collected subject to refund below the applicable increased rate ceiling. Although M & M has not alleged that it is in financial difficulty as Dorchester did, this does not preclude them from receiving similar relief here. It should be noted, however, that unlike Dorchester, the seven percent interest obligation will be in effect for the entire refund period for both CM & M and M & M. The reason for this difference in treatment is that movant has always been under a seven percent interest obligation even though the money was put in trust, while Dorchester was not.

The Commission orders:

(A) The Chase Manhattan Bank of New York as trustee under the escrow agreements executed on June 14, 1961, in Docket No. RI61–239 and April 7, 1964, in Docket No. RI64–404 shall release $347,717.33 forthwith to CM & M plus any amounts attributable to CM & M's interest which have been deposited with it since September 30, 1965, and upon notification by the Secretary of the Commission that M & M has complied with the provisions of paragraph (C) hereof, it shall release $359,830.21 to M & M plus any amounts attributable to M & M's interest, which have been deposited with it since September 30, 1965. Except as specifically provided herein, these escrow agreements shall remain in full force and effect.

(B) The agreement and undertaking submitted by CM & M in the above-entitled proceedings is accepted for filing and the agreement and undertaking of M & M insofar as it relates to amounts collected below 14.5¢ per Mcf, inclusive of the applicable contract charge for dehydration, is also accepted for filing.

(C) Within 30 days of the date of issuance of this order, M & M shall file an acceptable surety bond in the amount of $210,000 in accordance with the form attached hereto.*

(D) CM & M may collect all future amounts attributable to its interest in the above-entitled proceedings pursuant to the agreement and undertaking accepted herein and upon the filing of an acceptable surety bond M & M may also collect all future amounts attributable to its interests in the above-entitled proceedings pursuant to such bond and the agreement and undertaking accepted herein.

* Omitted in printing

Before Commissioners: Joseph C. Swidler, Chairman; Charles R. Ross, David S. Black and Carl E. Bagge.

RECREATIONAL DEVELOPMENT AT LICENSED PROJECTS, DOCKET NO. R-294

ORDER NO. 313

ISSUING STATEMENT OF GENERAL POLICY

(Issued December 27, 1965)*

This order sets forth a statement of Commission Policy with respect to outdoor recreational development at projects licensed or to be licensed under the Federal Power Act.

There has been a dramatic increase in public utilization of outdoor recreation opportunity during the twenty years since World War II. During the period from 1952 to 1962, for example, visits to National Parks increased 87 percent, visits to other Federal recreation areas increased 238 percent, and visits to State parks increased 113 percent.

The population of the United States has increased substantially in the past two decades, with greater growth predicted for the future. A larger number of Americans than ever before are participating in one form or another of outdoor recreation at established recreational areas. Reservoirs at Federally licensed projects currently provide a significant source of outdoor recreation opportunity; but there is every indication that greatly expanded recreational development at such sites is possible both at existing projects and at those to be licensed in the future.

The Congress, in enacting Public Law 88-29[1] recognizing future recreational needs of the nation, set forth the following national policy on outdoor recreation:

> * * * the Congress finds and declares it to be desirable that all American people of present and future generations be assured adequate outdoor recreation resources, and that it is desirable for all levels of government and private interests to take prompt and coordinated action, to the extent practicable without diminishing or affecting their respective powers and functions, to conserve, develop, and utilize such resources for the benefit and enjoyment of the American people.

The President, by Executive Order 11017, dated April 27, 1962, established the Recreation Advisory Council to provide broad policy advice to the heads of federal agencies on all important matters affecting outdoor recreation resources and to facilitate coordinated efforts among federal agencies.

The Federal Power Commission has long been interested in recreational development at licensed projects. While section 10(a) of the Federal Water Power Act of June 10, 1920 (41 Stat. 1063) did not refer specifically to recreation, in 1935 when the Federal Water Power Act was re-enacted as Part I of the Federal Power Act (49 Stat. 838, 16 U.S.C. 791a–825r), the words "including recreational purposes" were added to section 10(a) to make clear that

---

*Published in the Federal Register on December 27, 1965 (30 F.R. 16197).

[1] An act to promote the coordination and development of effective programs relating to outdoor recreation (77 Stat. 49, 16 U.S.C. 4601). This statute established the Bureau of Outdoor Recreation within the Department of the Interior to promote the coordination and development of effective programs relating to outdoor recreation.

recreation considerations were to be included in comprehensive development of the nation's water resources.

In the ensuing years the Commission, starting with a practice of considering project recreational possibilities on case-by-case basis at the time of initial application, has gradually developed a comprehensive general pattern. Standard license forms for various categories of projects have for a number of years provided for reasonable free public access to project reservoirs for recreational purposes, and obliging the licensee, upon notice and opportunity for hearing, to take such steps to install reasonable recreational facilities as might be required by public interest and consistent with the other objectives of the license. Recognizing the need for greater advance planning for development of outdoor recreation resources at licensed projects, the Commission, in 1962, issued a notice of proposed rulemaking (Docket No. R-223), proposing that license applicants submit a recreational use plan for all major projects. This proceeding culminated on April 25, 1963 in Order No. 260-A 29 FPC 777, 28 F.R. 4092), whereby the Commission amended § 4.41 of its Regulations under the Federal Power Act to require the filing of Exhibit R—a recreational use plan—as part of every application for major license filed after June 1, 1963. The requirements of Exhibit R were further particularized by Order No. 292, issued January 8, 1965 (33 FPC 32, 30 F.R. 523).

Reflecting its desire to make project recreational opportunities widely known to the general public, the Commission by Order No. 299, issued May 27, 1965, amended Regulations under the Federal Power Act by adding a new Part 8 requiring the publicizing of recreational features or operational procedures affecting recreation at licensed projects (33 FPC 1131, 30 F.R. 7313).

These various provisions constitute a comprehensive recreational package applicable to all new major licensees, whether their licenses are for constructed or unconstructed projects. We also intend in connection with any application for substantial amendment to a license, reasonably related to recreation, which does not presently incorporate an article requiring the filing of a recreational use plan, the standard free access article, or the article providing for the installation of such recreational facilities as the Commission might, after notice and opportunity for hearing, find consistent with the other objectives of the license and required by public interest, to require the licensee to show cause why such articles should not be incorporated into its license, if the license is otherwise amended in response to the application. And in the future we shall not approve any application or request by a licensee to dispose of any interest in lands within project boundaries, in the absence of a showing by the licensee that such disposal is not inconsistent with the approved public recreational plan for the project, or, in the absence of such a plan, that the lands in question do not have recreational value.

By separate order we are amending Section 4.41 of the regulations to make clear that we expect licensees to extend their project boundaries beyond the 200 feet from the exterior margin of reservoirs presently specified whenever appropriate to effectuate a comprehensive recreational plan. In addition, it is our view, as set out in the proposed policy statement below, that generally all recreational areas specified in an approved plan, should be acquired by the licensee in fee, and should include all lands immediately adjacent to the exterior margin of the reservoirs. We recognize, however, that in the case of some constructed though unlicensed projects or amendments to existing licenses, the latter two objectives on occasion may not be consistent with the economic well being of the project, or in isolated situations of low recreational potential, required by the public interest.

The Commission believes that irrespective of the requirements of their licenses, licensees whose projects comprise land and water resources with outdoor recreational potential have a responsibility for the development of those resources in accordance with area needs, to the extent that such development is not inconsistent with the primary purpose of the project. All licensees will therefore be encouraged to submit for Commission approval and incorporation into their licenses an appropriate recreational plan. In assuming this responsibility the licensee should consider each project on the basis of its physical and economic characteristics, its operational plan, and area needs for outdoor recreation. As an aid to both licensees and the Commission in this endeavor we are proposing to initiate a nationwide inventory of the recreational potential of all Commission licensees for which an appropriate recreational use plan had not been approved within the last five years.

When formulating plans for project recreational facilities, applicants and licensees are encouraged to consult and coordinate such planning with local, state and federal agencies concerned with outdoor recreation, as well as with professional recreational facilities designers and landscape architects. Pursuant to The Land and Water Conservation Act of 1965 (P.L. 88–578, 78 Stat. 897, 16 U.S.C. 4601–4), public funds may be made available by the Secretary of the Interior for both state and federal acquisition and for state development of recreational areas under appropriate circumstances. Cooperation with the Bureau of Outdoor Recreation of the Department of the Interior as well as with interested state agencies could result in state or federal developments adjacent to licensed projects reservoirs, thereby supplementing and enhancing project facilities.

The Commission recognizes that a licensee will incur costs in providing recreational facilities, and, therefore, will allow appropriate and reasonable expenditures for recreational facilities, including the purchase of additional land, to be included as part of the project cost. The Commission also recognizes that certain annual costs will be incurred by a licensee in the operation and maintenance of recreational facilities. Accordingly, the Commission will not object to the imposition by a licensee of reasonable user fees in order to help defray these costs.

In making project lands, waters, and facilities available for public recreation, licensee should, of course, comply with local and state regulations and also formulate such rules of use as may be appropriate to insure public safety.

Concurrently with the issuance of this order we are issuing a report entitled "Criteria and Standards for Outdoor Recreation Development at Hydroelectric Projects." The report consists of a selected compilation of criteria and standards utilized by federal and state agencies concerned with outdoor recreation development which are adaptable to hydroelectric projects. We are making it public in the hope that it will be of value to licensees, applicants for license, and recreational planners, in formulating plans for the development of recreational facilities at hydroelectric projects.

The Commission finds:

(1) The notice and effective date provisions of section 4 of the Administrative Procedure Act do not apply with respect to the amendment here adopted.

(2) It is appropriate and in the public interest in administering Part I of the Federal Power Act to promulgate Commission policy on recreational development at licensed projects.

The Commission orders:

(A) Part 2, General Policy and Interpretations, Subchapter A, Chapter I of Title 18 of the Code of Federal Regulations is amended by adding a new § 2.7, entitled "Recreational development at licensed projects," as follows:

§ 2.7 Recreational development at licensed projects.

The Commission will evaluate the recreational resources of all projects under federal license or applications therefor and seek, within its authority, the ultimate development of these resources, consistent with the needs of the area to the extent that such development is not inconsistent with the primary purpose of the project. Reasonable expenditures by a licensee for public recreational development pursuant to an approved plan, including the purchase of land, will be included as part of the project cost. The Commission will not object to licensees and operators of recreational facilities within the boundaries of a project charging reasonable fees to users of such facilities in order to help defray the cost of constructing, operating, and maintaining such facilities.

The Commission expects the licensee to assume the following responsibilities:

(a) To acquire in fee and include within the project boundary enough land to assure optimum development of the recreational resources afforded by the project. To the extent consistent with the other objective of the license, such lands to be acquired in fee for recreational purposes shall include the lands adjacent to the exterior margin of any project reservoir plus all other project lands specified in any approved recreational use plan for the project.

(b) To develop suitable public recreational facilities upon project lands and waters and to make provisions for adequate public access to such project facilities and waters.

(c) To encourage and cooperate with appropriate local, state, and federal agencies and other interested entities in the determination of public recreation needs and to cooperate in the preparation of plans to meet these needs, including those for sport fishing and hunting.

(d) To encourage governmental agencies and private interests, such as operators of user-fee facilities, to assist in carrying out plans for recreation, including operation and adequate maintenance of recreational areas and facilities.

(e) To cooperate with local, state, and federal government agencies in planning, providing, operating, and maintaining facilities for recreational use of public lands administered by those agencies adjacent to the project area.

(f) To comply with local and state regulations for health, sanitation, and public safety, and to cooperate with local law enforcement authorities in the development of additional necessary regulations for such purposes.

(g) To ensure public access and recreational use of project lands and waters without regard to race, color, sex, religious creed or national origin.

(h) To inform the public of the opportunities for recreation at licensed projects, as well as of rules governing the accessibility and use of recreational facilities.

(B) Licensees who have not already done so are encouraged to file comprehensive recreational plans for approval and incorporation within their licenses to the extent necessary and appropriate to provide adequate recreational facilities, the Commission will approve extensions of the boundaries of existing projects as part of its approval of any such plan.

(C) The Commission will not grant any authorization for a licensee to dispose of any interest in project lands, unless a showing is made that such

disposal is not inconsistent with any approved recreational plan or in the absence of such a plan, that the lands do not have recreational value. Pending a determination by the Commission that such lands are not needed for public recreational purposes, all project lands, buildings, or other property will be considered to be required to achieve the purposes of the license within the meaning of any article in the license relating to the leasing of such lands, buildings, or other property. The licensee, in the absence of specific Commission exemption from these requirements, shall include in the instrument of conveyance a covenant running with the land adequate to insure that, unless the Commission subsequently authorizes a different use as consistent with a comprehensive plan for improving or developing the waterway, the use of the lands conveyed will not endanger health, create a nuisance, or otherwise be incompatible with over-all project recreational use.

(D) The amendments prescribed herein will be effective upon the issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; Charles R. Ross, David S. Black and Carl E. Bagge.

HYDROELECTRIC LICENSES—APPLICATIONS—EXHIBIT K, DOCKET NO. R-295

ORDER NO. 314

AMENDING SECTION 4.41, EXHIBIT K REGULATIONS UNDER THE FEDERAL POWER ACT

(Issued December 27, 1965)*

In developing its general policy with respect to recreational development at projects licensed or to be licensed under Part I of the Federal Power Act, the Commission became aware of the need to amend § 4.41 *Exhibit K*, (1)(iii) of Regulations under the Federal Power Act, as hereinafter provided, to relax the requirements of that subsection with respect to the distance the project boundary may extend from the exterior margin of a reservoir. The purpose of this amendment is to permit the establishment of a project boundary extending more than 200 feet (horizontal measurement) from the exterior margin of the reservoir (in general, high-water level), as presently limited, in cases where the provision for or construction of project recreational facilities would make it appropriate and desirable to exceed the 200 foot limitation.

The Commission finds:

(1) The amendment of section 4.41 of the Commission's Regulations under the Federal Power Act, prescribed herein, is necessary and appropriate for the administration of the Federal Power Act.

(2) Since the amendment of section 4.41, prescribed herein, relaxes the requirements of the section, compliance with the notice and effective date provisions of Section 4 of the Administrative Procedure Act is unnecessary.

The Commission, acting pursuant to the provisions of the Federal Power Act, as amended, particularly sections 4 and 309 thereof (49 Stat. 839, 858; 16 U.S.C. 797, 825c, 825j), *orders:*

---

*Published in the Federal Register on December 29, 1965 (30 F.R. 16198).

(A) Section 4.41 *Exhibit K*, Subchapter B, Chapter I of Title 18 of the Code of Federal Regulatons, is amended by amending paragraph (1)(iii) to read as follows:

§ 4.41 Required exhibits. * * *

Exhibit K * * *

(1) * * *

(iii) Except with respect to lands necessary or appropriate for recreation purposes, for which it is recognized that additional project area will generally be required, the project boundary shall be no more than 200 feet (horizontal measurement) from the exterior margin (in general, high-water level) of reservoirs, nor shall the width of the project area for canals, ditches, pipe lines, transmission lines, roads, and other so-called continuous structures exceed 200 feet, unless satisfactory reasons are given to the contrary. The project boundary shall be shown on the map in such manner that it can be readily identified on the ground. There shall be shown the location and description of monuments and other marks with reference lines therefrom to permanent objects in accordance with good practice in land surveying.

[Sections 4, 309, 49 Stat. 839, 858; 16 U.S.C. 797, 825c, 825j]

(B) The amendment herein prescribed will be effective upon issuance of this order.

(C) The Secretary shall cause prompt publication of this order to be made in the Federal Register.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

HYDROELECTRIC LICENSED PROJECTS—INSPECTIONS TO INSURE SAFE OPERATION, DOCKET NO. R-268

ORDER NO. 315

PROMULGATING NEW PART 12 OF REGULATIONS UNDER THE FEDERAL POWER ACT

(Issued December 27, 1965)*

On October 20, 1964, the Commission gave notice by publication in the Federal Register (29 F.R. 14643) that it proposed to require licensees under the Federal Power Act to provide complete safety inspections of hydroelectric project works by independent consultants at regular five-year intervals or more frequently, if necessary. The proposed regulations are not intended to relieve or release the licensee from any existing responsibility for maintenance, operation and inspection of its project to assure its stability and safety, or for immediate notification to the Commission's representative concerning any condition or development which could have an effect on the safety of project structures. They are designed to supplement existing Commission inspection procedures, thereby improving the Commission's effectiveness in carrying out its statutory responsibilities to protect the public safety. (16 U.S.C. 803(c)).

Comments were invited from interested persons to be submitted by December 9, 1964. At the request of several licensees, the time for filing written views

*See order dismissing notice of intervention, etc., issued February 25, 1966, 35 FPC 274. Published in the Federal Register on December 29, 1965 (30 F.R. 16199).

was subsequently extended through January 8, 1965 (29 F.R. 16997). In response to this notice and invitation, the Commission has received a number of comments[1] with regard to the proposed regulations and has taken them into consideration in preparing the text of the regulation which is herein promulgated.

While comments endorsed the objectives of the proposed rule to protect the public safety through periodic inspection of project facilities, doubts were expressed both as to its necessity and effectiveness. The comments indicated that the proposed regulation would in some instances duplicate existing state inspection programs and in others duplicate more stringent inspection programs currently maintained by licensees with their own personnel. There were many suggestions that run-of-river projects with little or no storage and small low-head developments be exempt. Strong preferences were expressed for revision of the rule to provide for inspection at periodic intervals by the licensee's staff, as opposed to independent inspections by outside consultants, in accordance with specific Commission requirements and subject to Commission staff review.

We intend that the licensee's own staff be eligible for participation in the inspections so long as they operate under the direction and supervision of an independent consultant. Use of the licensee's staff, under supervision of an outside consultant, may reduce costs without impairing the benefits secured by an independent examination. In order to achieve public confidence in the safety program, however, it is vital that an ultimate judgment be exercised by outside consultants to complement the inspection programs of the licensee and any state agency. Of course we expect that the licensee and his consutlants will give due consideration to the state's inspection program. Accordingly, while we have adopted a number of the suggestions to clarify and simplify the rule, we are unable to acquiesce in the general objections.

The purpose of the inspection program established by this order is to assure that adequate and timely measures will be taken to protect the public safety. Within this context we have provided in the regulation that inspection procedures shall apply only to those licensed projects having a dam exceeding 35 feet in height above stream bed or having a gross storage capacity in excess of 2000 acre feet, and that licensee's own personnel may be utilized so long as the inspections and the report thereof be made under the direction and with the approval of an independent consultant.

In setting the five-year interval between inspections, the Commission recognized the difficulty of accurately predicting the condition of project structures for longer periods of time. To avoid inequities the regulation includes a time schedule for initial inspections based on the length of time a project has been under license.

The Commission further finds:

(1) The detailed, objective inspections by or under the direction of independent consultants will provide important assistance to the Commission in carrying out its obligations under the Federal Power Act by assuring that the Commission and the licensees both have accurate and up-to-date information on the condition of project structures and facilities.

(2) In view of the foregoing, and upon consideration of all relevant matters presented, this amendment is necessary and appropriate for the purposes of the Federal Power Act.

[1] Comments were received from 49 licensees and from one individual.

The Commission, acting pursuant to the Federal Power Act, as amended, particularly sections 10(c), 304(a) and 309 thereof (49 Stat. 842, 855, 858; 16 U.S.C. 803(c), 825c(a), 825h), *orders:*

(A) Subchapter B, Regulations Under the Federal Power Act, Chapter I, Title 18, of the Code of Federal Regulations, is amended by inserting new Part 12, to read as follows:

Part 12—INSPECTION OF PROJECT WORKS WITH RESPECT TO SAFETY OF STRUCTURES

§ 12.1 Applicability

Unless otherwise ordered by the Commission, the provisions of this part shall apply with respect to projects licensed under Part I of the Federal Power Act having a dam exceeding 35 feet in height above stream bed or having a gross storage capacity in excess of 2000 acre feet.

§ 12.2 Periodic inspections

Notwithstanding any other terms and conditions of the license, the licensee shall cause a complete inspection of the project works, excluding transmission lines and generating equipment, to be made at least every 5 years, in order to determine whether there are any deficiencies or potential deficiencies in the condition of project structures, quality and adequacy of maintenance or methods of operation which might endanger public safety. Such inspections shall provide pertinent data with respect, but not limited, to such matters as settlement, movement, erosion, seepage, leakage, cracking examination of internal conditions of stress and hydrostatic pressures in structures, their foundations and abutments, functioning of foundation drains and relief wells, and stability of critical sections of reservoir shorelines and backslopes above structures. It is contemplated that the inspections may involve the use of special equipment, instrumentation, procedures and inspection staff. In the planning of the inspection and the preparation of the reports required by § 12.5, the licensee and the consultant responsible under § 12.4 shall give due consideration to pertinent reports made by or under the direction of federal or state agencies, prior reports submitted under this regulation, and reports made by other consultants.

§ 12.3 Additional inspections

When an inspection by the licensee or the Commission's staff reveals conditions of concern regarding the safety of any project structure or the operation of the project works, the licensee shall cause such additional inspection and investigation to be made as may be found by the Commission to be warranted under the circumstances.

§ 12.4 Responsibility for inspections.

The inspections provided for by §§ 12.2 and 12.3 of this part shall be performed by or under the responsibility and direction of qualified independent consultants.

§ 12.5 Report of inspections—recommendations

The arrangement between the licensee and the consultants shall provide that:

(a) A report shall be made by or under the direction of the consultants who shall certify approval thereof. It shall include a review of any and all items relating to the safety of the project, including records of observations of pressures, stresses, settlements and similar data, and recommendations, if any, as to corrective measures required. The report shall also include any recommendations considered appropriate on instrumentation or periodic observations of the behavior of any features of the project. If, during the course of an inspection, conditions are disclosed which indicate the need for

emergency corrective measures, the situation shall be reported to the Commission at once.

(b) Three copies of the report shall be filed with the Commission immediately upon its issuance.

(c) Within 30 days following submission of the report or within such other time as the Commission may direct, the licensee shall submit to the Commission any plan of action it proposes to take, which may include further investigation, for design and implementation of any corrective measures recommended in the report or design and implementation of any additional remedial measures which the licensee considers may be required.

§ 12.6 Initial inspection—Time for reporting

(a) *Licenses issued subsequent to the effective date of this part.* The initial inspection required by this part with respect to projects licensed after the effective date hereof shall be made so that the report required by § 12.5, together with licensee's proposal for remedial work, if any, can be submitted to the Commission within 5 years of the date of the first commercial operation of projects constructed under license and within two years of the date of the issuance of license for constructed projects.

(b) *Licenses issued prior to the effective date of this part.* The initial inspection required by this part with respect to the projects under license on the effective date hereof shall be made so that the report required by § 12.5, together with licensee's proposal for remedial work, if any, can be submitted to the Commission within the time specified in the following schedule:

If License Was Issued	*Initial Report Shall Be Submitted by*
Prior to January 1, 1940	March 1, 1967
January 1, 1940 to January 1, 1955	December 1, 1967
After January 1, 1955	September 1, 1968

[Sections 10(c), 304(a), 309, 49 Stat. 842, 855, 858; 16 U.S.C. 803(c), 825c(a), 825h]

(B) This amendment herein adopted shall become effective December 31, 1965.

(C) The Secretary shall cause prompt publication of this order to be made in the Federal Register.

Commissioner Ross *dissenting*, joined by Commissioner Bagge.

Ross, *Commissioner, dissenting:*

Delegating the responsibility and direction for inspection programs exclusively to independent engineering and geologic consultants, and refusing to accept the reports of state inspection agencies is, to say the least, quite unusual. Federal-State cooperation is something to be encouraged, particularly where duplicate costs can be avoided and where the knowledge and experience of existing state agencies effectively can be utilized. I naturally recognize that the public interest requires a state inspection agency to use the same standards as would an independent consultant or as would this agency. But state agencies should be given the opportunity independently to satisfy the requirements of this rule to the extent their programs are equal to or excel the program contemplated by the new regulation.

I therefore dissent to the new rule insofar as it requires investigations and reports duplicative of those made by state agencies.

Commissioner Bagge joins me in this dissenting statement.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

TEXAS GAS TRANSMISSION CORPORATION, DOCKET NO. CP66-60; GULF OIL CORPORATION, DOCKET NO. CI66-68

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND PERMITTING AND APPROVING ABANDONMENT

(Issued December 27, 1965)

On August 23, 1965, Texas Gas Transmission Corporation (Texas Gas) filed in Docket No. CP66-60 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain facilities, the continuance of the transportation of natural gas for a direct industrial sale and a transportation service for Gulf Oil Corporation (Gulf), all as more fully set forth in the application in Docket No. CP66-60.

Pursuant to Commission order issued January 22, 1951, in Docket No. G-1471 (10 FPC 689), as amended March 21, 1963, (29 FPC 566), Texas Gas was authorized to transport and deliver to Spencer Chemical Company (Spencer), located near Henderson, Kentucky, up to 11,500 Mcf of natural gas per day, on a high priority basis, and up to 10,000 Mcf per day, on an interruptible basis. Such service was provided for by contract, dated August 5, 1950, as amended. On April 29, 1964, Gulf acquired Spencer and succeeded to the rights and obligations of Spencer under the contract of August 5, 1950, as amended. Said contract was subject to determination on January 1, 1967. Texas Gas states that, as a result of discussions relating to an extension of the term of said contract, the parties entered into a transportation agreement and a sales agreement, each dated June 23, 1965. The new sales agreement supersedes the original industrial sales contract, as amended, and both new agreements are for a term of 12 years from January 1, 1965.

Texas Gas now proposes to continue the direct industrial sale to Gulf, on a high priority basis, in volumes up to 11,500 Mcf per day and also seeks authorization to render a transportation service for Gulf, on a high priority basis, in volumes up to 11,500 Mcf per day, provided that the total daily volume of gas to be sold and transported, on a high priority basis, shall not exceed in the aggregate 11,500 Mcf per day. Texas Gas will continue the direct interruptible sale of gas to Gulf in volumes up to 10,000 Mcf per day. Texas Gas states that the high priority sales and transportation services are subject to curtailment or discontinuance in order to supply the requirements of present or future customers of Texas Gas purchasing gas on a firm basis for resale; the interruptible sales are subject to curtailment or discontinuance at the sole option of Texas Gas.

The gas-subject to the transportation service will be produced by Gulf from acreage in the Church Point Field, Acadia Parish, Louisiana. Texas Gas proposes to construct a new meter station on its existing 20-inch line in Acadia Parish in order to receive gas from Gulf for transportation to Gulf's Spencer plant near Henderson, Kentucky. The estimated cost of this facility is $5,200, which cost will be financed from funds on hand.

On July 21, 1965, Gulf filed in Docket No. CI66-68 an application pursuant to Section 7(b) of the Natural Gas Act for permission and approval to abandon the sale of natural gas to Transcontinental Gas Pipe Line Corporation

(Transco) from the Church Point Field, Acadia Parish, Louisiana, all as more fully set forth in the application in Docket No. CI66–68.

Gulf states that Transco does not need the gas now being sold to it and does not, therefore, object to the proposed abandonment. The proposed abandonment will enable Gulf to make arrangements for disposing of its entire gas production from the Church Point Field thus avoiding further cumulation of under production. The gas now being sold to Transco will be transported by Texas Gas as proposed in Docket No. CP66–60. Gulf requests that the abandonment be made effective on the day Texas Gas commences transporting gas for Gulf.

Gulf never received certificate authorization for the subject sale to Transco since Gulf believed such sale to be nonjurisdictional prior to the *Lo-Vaca* decision[1] and, therefore, never filed with the Commission for such authorization. The date of initial delivery of gas to Transco was January 10, 1958. Gulf received an initial contract price of 22.80 cents per Mcf, inclusive of tax reimbursements, at 15.025 psia. On July 1, 1962, the price escalated to 24.80 cents per Mcf, inclusive of tax reimbursements, at 15.025 psia. These prices are above the guideline prices established by the Commission's Statement of General Policy No. 61–1, as amended. In light of the *Lo-Vaca* decision there exists a possibility that some portion of the rates collected by Gulf will have to be refunded. The abandonment will be permitted and approved in Docket No. CI66–68; however, such abandonment will be without prejudice to any future proceeding with respect to refunds in this matter and Gulf will remain responsible for any refunds which finally may be ordered.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the applications has been filed.

At a hearing held on December 16, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the applications and exhibits, submitted in support of the authorizations sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Texas Gas Transmission Corporation, a Delaware corporation having its principal place of business in Owensboro, Kentucky, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of March 30, 1949, in Docket No. G–859 (8 FPC 190).

(2) Applicant, Gulf Oil Corporation, is engaged in the sale of natural gas in interstate commerce for resale for ultimate public consumption, subject to the jurisdiction of the Commission, and is, therefore, a "natural-gas company" within the meaning of the Natural Gas Act.

(3) The facilities hereinbefore described, as more fully described in the application in Docket No. CP66–60, are to be used in the transportation and delivery of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof and the proposed transportation and delivery of natural gas by Texas Gas are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(4) Texas Gas is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

---

[1] *People of the State of California, et al.* v. *Lo-Vaca Gathering Company, et al.*, 379 U.S. 366 (1965).

(5) The construction and operation of the proposed facilities and the proposed transportation and delivery of natural gas by Texas Gas are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(6) Public convenience and necessity require that the certificate issued hereinafter to Texas Gas and the rights granted thereunder be conditioned upon Texas Gas' compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(7) The sale of natural gas proposed to be abandoned by Gulf as hereinbefore described, all as more fully described in the application in Docket No. CI66-68, is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(8) The abandonment hereinbefore described is permitted by the public convenience and necessity and should be approved as hereinafter ordered.

(9) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that the abandonment hereinafter permitted and approved in Docket No. CI66-68 should be without prejudice to any future proceeding with respect to refunds involving the sale to be abandoned and Gulf should remain responsible for any refund which finally may be ordered with respect to said sale.

The Commission orders:

(A) A certificate of public convenience and necessity is issued authorizing Applicant, Texas Gas Transmission Corporation, to construct and operate the proposed facilities and to transport and deliver natural gas as hereinbefore described, all as more fully described in the application in Docket No. CP66-60, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Texas Gas' compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities authorized in Docket No. CP66-60 shall be constructed and placed in actual operation and the proposed transportation and delivery of natural gas shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act within 3 months from the date on which this order issues.

(D) The certificate issued in paragraph (A) above is granted on the express condition that the interruptible service authorized herein shall be curtailed or interrupted to the extent required to meet existing or future contracted maximum delivery obligations of Texas Gas for firm service to its customers.

(E) Permission for and approval of the abandonment of the sale of natural gas by Gulf, as hereinbefore described and as more fully described in the application in Docket No. CI66-68, is granted.

(F) Gulf shall advise the Commission of the date of the aforesaid abandonment within 10 days of the date thereof.

(G) The abandonment permitted and approved in paragraph (E) above shall be without prejudice to any future proceeding with respect to refunds involving the sale to be abandoned and Gulf shall remain responsible for any refund which finally may be ordered with respect to said sale.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

TEXAS GAS TRANSMISSION CORPORATION, DOCKET NO. CP66-97; ARKANSAS LOUISIANA GAS COMPANY, DOCKET NO. G-10591

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY, AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY, AND ACCEPTING FOR FILING REVISED TARIFF SHEETS

(Issued December 27, 1965)

On October 11, 1965, Texas Gas Transmission Corporation (Texas Gas), filed in Docket No. CP66-97 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing an increase in the Contract Demand of an existing customer, Arkansas Missouri Power Company (Arkansas Missouri), by 1,890 Mcf per day to a total Contract Demand of 9,890 Mcf. Applicant states that the increased service would be made from existing excess capacity and, accordingly, no additional facilities would be required, all as more fully set forth in the application.

On October 11, 1965, Arkansas Louisiana Gas Company (Arkansas Louisiana), filed in Docket No. G-10591 a petition to amend the order of the Commission issued in said docket, as amended, by authorizing Arkansas Louisiana to increase the volume of gas transported by it pursuant to said order from 8,000 Mcf per day to 9,890 Mcf per day, all as more fully set forth in the petition to amend.

The certificate of public convenience and necessity issued in the aforementioned Docket No. G-10591 on October 23, 1956, and amended October 24, 1958 (16 FPC 1086 and 20 FPC 545, respectively) authorized MidSouth Gas Co. to transport a maximum of 8,000 Mcf of gas per day for Arkansas Missouri which the latter purchases from Texas Gas Transmission Corporation (Texas Gas).

On October 19, 1961, the Commission issued an order in Docket No. CP61-334 (26 FPC 591) authorizing Arkansas Louisiana to acquire and operate all the facilities of MidSouth Gas Co. and the name of Arkansas Louisiana was by said order substituted for that of MidSouth Gas Co. in the certificate authorizations previously granted to MidSouth Gas Co. by the Commission, including the authorizations to MidSouth Gas Co. in Docket No. G-10591.

As noted above Texas Gas filed in Docket No. CP66-97 an application on October 11, 1965, pursuant to Section 7(c) of the Natural Gas Act for authority to increase the Contract Demand of its existing customer, Arkansas Missouri by 1,890 Mcf per day to a total Contract Demand of 9,890 Mcf. Accordingly, pursuant to an agreement between Arkansas Louisiana and Arkansas Missouri dated September 24, 1965, Arkansas Louisiana now requests the further amendment of the certificate heretofore issued in Docket No. G-10591, as amended, to which it has succeeded as aforesaid, to authorize it to transport a maximum of 9,890 Mcf of gas per day for Arkansas Missouri which Arkansas Missouri purchases from Texas Gas, all in accordance with its FPC Gas Rate Schedule XT-23. Arkansas Louisiana states that said rate schedule is being amended by appropriate tariff filings made contemporaneously with the instant certificate filing.

Arkansas Missouri has requested that the new service commence November 1, 1965, and has agreed to execute a new service agreement covering the increased allocation.

All gas sold by Texas Gas to Arkansas Missouri is delivered to Arkansas Louisiana and transported by it for the account of Arkansas Missouri pursuant to a certificate of public convenience and necessity issued October 23, 1956, in Docket No. G–10591, and amended October 24, 1958, to authorize the transportation of a maximum of 8,000 Mcf per day. To reflect the change in transportation volumes, Arkansas Louisiana filed First Revised Sheet Nos. 44, 45, 46 and 56 to its FPC Gas Tariff, First Revised Volume No. 2, which it proposes to supersede Original Sheet Nos. 44, 45, 46 and 56 of its FPC Gas Tariff, First Revised Volume No. 2.

Due notice of the filing of the application to amend and opportunity for hearing thereon have been given by publication in the Federal Register on October 30, 1965 (30 F.R. 13843). No protest, petition to intervene or notice of intervention has been filed in the proceeding concerning the amendment in Docket No. G–10591 or the application filed in Docket No. CP66–97.

At a hearing held on December 16, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits in said dockets, submitted in support of the authorization sought, and upon consideration of the record,

The Commission finds:

(1) Texas Gas Transmission Corporation, a Delaware corporation having its principal place of business in Owensboro, Kentucky, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of March 30, 1948, in Docket No. G–855 (7 FPC 213).

(2) The proposed sale and delivery of natural gas by Texas Gas to Arkansas Missouri Power Company as hereinbefore described, and as more fully described in the application, in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid proposed sale and delivery of natural gas is required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Texas Gas is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Texas Gas' compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(6) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order issued October 23, 1956, in Docket No. G–10591 be amended as hereinafter ordered and Arkansas Louisiana's First Revised Sheet Nos. 44, 45, 46 and 56 of its FPC Gas Tariff, First Revised Volume No. 2 be accepted for filing.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to Texas Gas Transmission Corporation, authorizing the sale and delivery of natural gas to Arkansas Missouri Power Company, as hereinbefore described and as more fully described in the application in this proceeding, upon the terms and conditions of this proceeding.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Texas Gas' compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(C) Texas Gas and Arkansas Missouri Power Company execute a superseding service agreement in accordance with the Commission's Regulations reflecting the increase in daily contract quantity of 1,890 Mcf, and file the same with the Commission within 30 days after the issuance of this order.

(D) The Commission's said order issued in Docket No. G–10591 is further amended so as to authorize Arkansas Louisiana to increase the volume of natural gas to be transported by it from 8,000 Mcf daily to 9,890 Mcf daily, as requested in the application to further amend.

(E) Arkansas Louisiana's proposed First Revised Sheet Nos. 44, 45, 46 and 56 to its FPC Gas Tariff, First Revised Volume No. 2 are accepted for filing effective as of the date of this order.

(F) In all other respects said order in Docket No. G–10591 shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

TRANSWESTERN PIPELINE COMPANY, DOCKET NO. CP64–34

ORDER FURTHER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued December 27, 1965)

On September 13, 1965, Transwestern Pipeline Company (Petitioner) filed in Docket No. CP64–34 a petition to amend further the Commission's order issued December 16, 1963, 30 FPC 1520, in the subject docket, as amended December 4, 1964, 32 FPC 1403, to authorize Petitioner to sell and deliver up to 440,000 Mcf of gas per day on an annual average basis to Pacific Lighting Gas Supply Company (Pacific Lighting) for a period ending December 31, 1966, or until the commencement of a new service sought to be initiated in a proceeding now pending before the Commission in Docket No. CP63–204, *et al.*, whichever date is earlier. Petitioner also proposes to increase its maximum daily demand obligation for such deliveries to 430,000 Mcf effective January 1, 1966. Petitioner's proposals are more fully set forth in the petition to amend.

The Commission's order issued December 16, 1963, as amended, authorized Petitioner, among other things, to increase its annual average deliveries to Pacific Lighting from 345,000 Mcf per day to 430,000 Mcf per day and to increase its maximum daily delivery obligation to 410,000 Mcf for a temporary period ending December 31, 1965, or until the commencement of a new service sought to be initiated in a proceeding now pending before the Commission in Docket No. CP63–204, *et al.*, whichever date is earlier.

The petition indicates that Petitioner has the capacity in its facilities to deliver substantially more gas during cold weather months than it is now authorized to deliver. At a delivery pressure of 650 psig, Petitioner can deliver the proposed maximum daily obligation of 430,000 Mcf during the warm weather months and over 442,000 Mcf during the cold weather months. Accordingly,

Petitioner proposes an annual average limitation of 440,000 Mcf per day on sales to Pacific Lighting.

Due notice of the filing of the petition to amend and opportunity for hearing thereon has been given by publication in the Federal Register on September 24, 1965 (30 F.R. 12257). No protest or petition to intervene has been filed in this proceeding.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order issued December 16, 1963, as amended, in Docket No. CP64–34 be further amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order issued December 16, 1963, as amended, in Docket No. CP64–34 is further amended by increasing the volume of natural gas which may be sold and delivered by Petitioner to Pacific Lighting from 430,000 Mcf to 440,000 Mcf per day on an average annual basis and by extending the terms of the certificate through December 31, 1966, or until the commencement of a new service, if any, which may be authorized as a result of a proceeding now pending before the Commission in Docket No. CP63–204, *et al.*, whichever date is earlier; provided, however, this order shall not be construed as prejudicing the determinations to be made in the proceeding pending in Docket No. CP63–204, *et al.* Further, Petitioner is authorized to increase its maximum daily demand obligation for Pacific Lighting to 430,000 Mcf effective January 1, 1966.

(B) In all other respects said order, as amended, shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

ARKANSAS LOUISIANA GAS COMPANY, DOCKET NO. RP66–15

ORDER SUSPENDING PROPOSED CHANGE IN RATE AND PROVIDING FOR HEARING

(Issued December 28, 1965)

Arkansas Louisiana Gas Company (Ark-La), on November 1, 1965, tendered for filing Supplement No. 1 to its Rate Schedule XFS–20 proposing to increase the rate for sale of natural gas to National Fuels Corporation[1] (National), and Oklahoma Natural Gas Company (ONG) in the producing area of Major County, Oklahoma. The filing, proposed to become effective as of January 1, 1966, amounts to an annual increase of approximately $3,500 per year based on sales for the year 1964.

Ark-La's Rate Schedule XFS–20 presently provides for field sales of natural gas to National and ONG at a rate of 11.0¢ per Mcf[2] which Ark-La would increase to 12¢ per Mcf, pursuant to periodic price escalation provisions in its contract. The proposed rate exceeds the area price of 11.0¢ for increased rates in the "Other Oklahoma Area."

[1] Successor in interest to Warren Petroleum Corporation.
[2] At 14.65 psia.

The increased rate proposed by Ark-La has not been shown to be justified and may be unjust, unreasonable, unduly discriminatory, or preferential or otherwise unlawful.

The Commission finds:

It is necessary and proper in the public interest and to aid in the enforcement of the provisions of the Natural Gas Act that the Commission enter upon a hearing concerning the lawfulness of Ark-La's proposed change in rates, and that Supplement No. 1 to Ark-La's FPC Gas Rate Schedule XFS–20 be suspended and the use thereof deferred as hereinafter ordered.

The Commission orders:

(A) Pursuant to the authority of the Natural Gas Act, particularly Sections 4 and 15 thereof, the Commission's Rules of Practice and Procedure and the Regulations under the Natural Gas Act [18 CFR, Chapter I], a public hearing shall be held, upon a date to be fixed by notice from the Secretary, concerning the lawfulness of Ark-La's proposed increased rate and charge contained in Supplement No. 1 to its FPC Gas Rate Schedule XFS–20.

(B) Pending a hearing and decision thereon, Supplement No. 1 to Ark-La's FPC Gas Rate Schedule XFS–20 is hereby suspended and the use thereof is deferred until May 1, 1966, and thereafter until such further time as it is made effective in the manner prescribed by the Natural Gas Act.

(C) Neither the supplement hereby suspended, nor the rate schedule sought to be altered thereby, shall be changed until this proceeding has been disposed of or until the period of suspension has expired, unless otherwise ordered by the Commission.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

COLORADO INTERSTATE GAS COMPANY, DOCKET NO. CP64–182

ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY, AND ACCEPTING TARIFF SHEETS FOR FILING

(Issued December 28, 1965)

Colorado Interstate Gas Company (Applicant), filed on November 8, 1965, in Docket No. CP64–182 an application to further amend the order of the Commission issued in said docket on June 2, 1964, 31 FPC 1339, which authorized the operation of existing facilities and the exchange of natural gas between Applicant and Natural Gas Pipeline Company of America (Natural) for the calendar year 1964, as more fully set forth in the application to amend.

By its "Order Amending Order Issuing Certificate of Public Convenience and Necessity and Accepting Tariff Sheets for Filing" issued April 14, 1965, 33 FPC 736, in this docket, the Commission authorized Applicant to continue operating its existing facilities and to continue the exchange of natural gas with Natural for the calendar year 1965. Such exchange was to allow Applicant to deliver up to 10,000 Mcf of gas per day on an interruptible basis to Natural in return for like volumes which Natural agreed to deliver to Cabot Corporation (Cabot) for Applicant's account. The gas so delivered is used by Cabot in its carbon black plants in the Panhandle of Texas.

Applicant continues to have a supply of gas temporarily in excess of its market requirements which Cabot continues to need. For the reasons stated above, Applicant and Natural have agreed to extend the term of the Exchange Agreement to April 1, 1967.

Applicant is filing concurrently revised sheets under its Rate Schedule X–20 to effectuate the extension of the term described above.

Due notice of the subject application to amend and opportunity for hearing has been given by publication in the Federal Register on November 24, 1965 (30 F.R. 14618). No protest, petition to intervene, or notice of intervention has been filed in the proceedings concerning this amendment.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order issued June 2, 1964, in Docket No. CP64–182 be further amended and Revised Tariff Sheets under its Rate Schedule X–20 be accepted for filing as hereinafter ordered.

The Commission orders:

(A) The Commission's order issued June 2, 1964, in Docket No. CP64–182, and as amended April 14, 1965, is further amended so as to authorize Colorado Interstate Gas Company to continue the operation of its facilities and the exchange of natural gas with Natural Gas Pipeline Company of America to April 1, 1967.

(B) The Revised Tariff Sheets under its FPC Rate Schedule X–20 to its FPC Gas Tariff are accepted for filing effective on the date of this order.

(C) In all other respects said order shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP62–154

ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued December 28, 1965)

On September 27, 1965, El Paso Natural Gas Company (Applicant), filed in Docket No. CP62–154 an application and a supplement thereto on October 26, 1965, to amend the order of the Commission issued October 17, 1962, in Docket No. CP62–154, 28 FPC 614, authorizing Applicant to sell and deliver on an interruptible, best efforts basis, under its Rate Schedule G–X–2, FPC Gas Tariff, Original Volume No. 1, during the calendar year 1962, up to 25,700,000 Mcf of natural gas (at 14.9 psia) to Southern California Gas Company and Southern Counties Gas Company of California (jointly "Southern") for resale by Southern in the southern California market area.

Applicant seeks amendment of said order pursuant to a service agreement between Applicant and Southern dated September 1, 1965, providing for extended service to Southern, all as more fully set forth in the application to amend.

Southern will use the gas to increase the reserves in its storage reservoirs and to provide additional interruptible industrial service. Increase will be

under Applicant's Rate Schedule G–X–2 at a rate of 22.48 cents per Mcf for a limited period ending December 31, 1966.

Applicant states that service to Southern under Rate Schedule G–X–2 during portions of 1963 and portions of 1964 through April 30, 1964, was authorized to be continued by successive temporary certificates; and service to Southern under Rate Schedule G–X–2 for a period continuing through December 31, 1965, was authorized to be continued by order issued on August 31, 1964 (32 FPC 674). As evidenced by Southern's letter dated August 11, 1965, Southern has again requested extension of G–X–2 service for the calendar year 1966, and Applicant seeks amendment of the said order of October 17, 1962, necessary to make such service available to Southern.

Under the aforementioned service agreement between the parties dated September 1, 1965, the desired extension of service under Rate Schedule G–X–2 is proposed to be rendered by means of existing facilities and upon terms and conditions identical to those applicable to the G–X–2 service last certificated for the 16-month period terminating December 31, 1965.

Due notice of the filing of the application to amend and opportunity for hearing has been given by publication in the Federal Register on October 13, 1965 (30 F.R. 13028). No protest, notice of intervention, petition to intervene or request for hearing has been filed concerning this amendment.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act, and the public convenience and necessity require that the Commission's order issued October 17, 1962, in Docket No. CP62–154 be amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order issued October 17, 1962, in Docket No. CP62–154 is amended so as to authorize, during the limited period commencing January 1, 1966, and continuing through December 31, 1966, the sale and delivery of a maximum of 174,680 Mcf of natural gas (at 14.73 psia) daily to Southern California Gas Company and Southern Counties Gas Company of California.

(B) Applicant shall report at the end of each thirty day period the volumes of natural gas sold and delivered to Southern.

(C) In all other respects said order shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP65–45

ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND ACCEPTING FOR FILING SERVICE AGREEMENT AND REVISED TARIFF SHEET

(Issued December 28, 1965)

On October 20, 1965, El Paso Natural Gas Company (Applicant) filed in Docket No. CP65–45 a petition to amend the certificate of public convenience and necessity issued by the Commission in said docket on November 9, 1964, 32 FPC 1285, which order authorized the delivery of natural gas to Pacific Gas & Electric Company (PG&E), as more fully set forth in the application to amend.

By the order of November 9, 1964, Applicant was authorized to deliver natural gas on an interruptible, best efforts basis under Applicant's Rate Schedule G–X–3, FPC Gas Tariff, Original Volume No. 1, limited to a quantity, during a limited term, which was not to exceed the quantity which PG&E had paid for in prior years. The gas which PG&E had paid for but not taken, but had the right to take without further payment under Rate Schedule G of Applicant's said tariff, was authorized to be delivered through December 31, 1965.

Applicant seeks to amend Commission authorization issued in Docket No. CP65–45, so as to extend for a one-year period the delivery to PG&E, an interruptible best efforts basis, of an amount of gas not to exceed that which PG&E has paid for in prior years under firm Rate Schedule G and has been unable to take. No additional facilities are proposed.

The present authorization issued on November 9, 1964, terminates on December 31, 1965.

Applicant is presently authorized to render firm service under Rate Schedule G to PG&E and jointly to Southern California Gas Company and Southern Counties Gas Company of California (Southern) up to specified maximum daily volumes. To the extent PG&E or Southern fails to take its authorized daily volumes under Rate Schedule G, such difference is deliverable to the other party under El Paso's Rate Schedule G–X. Total deliveries under G and G–X are not to exceed a specified daily volume.

Applicant estimates that the quantity of prepaid gas which PG&E will not have been recovered as of December 31, 1965, is 21,151,362 Mcf. PG&E requested extension of the service.

On November 9, 1965, Applicant filed a service agreement with PG&E and a modification of Rate Schedule G–X–3 (First Revised Sheet No. 27–M to FPC Gas Tariff, Original Volume No. 1) to cover the proposed service.

Due notice of the filing of the application to amend and opportunity for hearing thereon has been given by publication in the Federal Register on November 5, 1965 (30 F.R. 14023). No petition to intervene, notice of intervention, or protest to the granting of the application to amend has been filed.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order issued November 9, 1964, in Docket No. CP65–45, be amended; and a Service Agreement with PG&E and First Revised Sheet No. 27–M to El Paso's FPC Gas Tariff, Original Volume No. 1 be accepted for filing effective January 1, 1966.

The Commission orders:

(A) The Commission's order issued November 9, 1964, in Docket No. CP65–45 authorizing the delivery of natural gas on an interruptible, best efforts basis under Applicant's Rate Schedule G–X–3, FPC Gas Tariff, Original Volume No. 1, for a limited term, be amended so as to authorize Applicant to extend the period of delivery previously authorized for one year on the same basis and in volumes not to exceed that which Pacific Gas & Electric Company has paid for in prior years under Applicant's firm Rate Schedule G and has been unable to take.

(B) The Service Agreement dated September 13, 1965, and First Revised Sheet No. 27–M to Applicant's FPC Gas Tariff, Original Volume No. 1 be accepted for filing effective January 1, 1966.

(C) In all other respects said order shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

MICHIGAN WISCONSIN PIPE LINE COMPANY, DOCKET NO. CP65-191

ORDER AMENDING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND ACCEPTING SUPERSEDING SERVICE AGREEMENTS FOR FILING

(Issued December 28, 1965)

On November 4, 1965, Michigan Wisconsin Pipe Line Company (Petitioner) filed in Docket No. CP65-191 a petition to amend the certificate of public convenience and necessity issued by the Commission in said docket on March 30, 1965, 33 FPC 655, and amended by the order issued August 9, 1965, 34 FPC 445. The certificate, as amended, authorized Petitioner to construct and operate certain natural gas facilities and to sell and deliver an additional 79,868 Mcf of natural gas per day to certain existing customers. By the instant filing, Petitioner seeks authorization to increase the Maximum Daily Quantity (MDQ) of natural gas to be sold and delivered by it to American Gas Company (American Gas) and Keokuk Gas Service Company (Keokuk Gas), all as more fully set forth in the petition to amend.

American Gas has requested Petitioner to provide it with an additional MDQ of 528 Mcf of natural gas, for a total MDQ of 3,408 Mcf. Keokuk Gas has requested an additional MDQ of 500 Mcf of natural gas, for a total MDQ of 10,600 Mcf.

American Gas requires the additional quantity of gas in order to meet the terms of an agreement which it has recently entered into with a new industrial customer, and Keokuk Gas requires the increased quantities to meet the needs of an existing industrial customer.

Petitioner has submitted for filing superseding service agreements providing for the increased volumes to American Gas and to Keokuk Gas. Both contracts are dated October 12, 1965.

The American Gas service agreement provides for the purchase of gas under Petitioner's Rate Schedule SGS-1, at a rate of 44.7 cents per Mcf and the Keokuk Gas service agreement provides for the purchase of gas under Petitioner's Rate Schedule ACQ-1, which provides for a contract demand rate of $3.02 per Mcf and a commodity rate of 27.65 cents per Mcf.

Due notice of the filing of the petition to amend was published in the Federal Register on November 20, 1965 (30 F.R. 14537). No protest, petition to intervene, or notice of intervention has been filed in this proceeding.

The Commission finds:

(1) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the certificate of public convenience and necessity issued in Docket No. CP65-191 on March 30, 1965, and amended by the order issued on August 9, 1965, be amended as hereinafter ordered.

(2) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that the superseding service agreements between Petitioner and American Gas and between Petitioner and Keokuk Gas, each of which is dated October 12, 1965, be accepted for filing and made effective as of the date of this order.

The Commission orders:

(A) The certificate of public convenience and necessity issued to Michigan Wisconsin Pipe Line Company in Docket No. CP65-191 on March 30, 1965, and

amended by the order issued in said docket on August 9, 1965, is further amended by authorizing the sale and delivery by Petitioner to American Gas and to Keokuk Gas of an additional MDQ of natural gas to 528 Mcf and 500 Mcf, respectively, as hereinbefore described and as more fully described in the petition to amend.

(B) The superseding service agreements between Petitioner and American Gas and between Petitioner and Keokuk Gas, each of which is dated October 12, 1965, are accepted for filing and made effective as of the date of this order.

(C) In all other respects the certificate of public convenience and necessity, as amended, shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

PENNSYLVANIA ELECTRIC COMPANY AND CLEVELAND ELECTRIC ILLUMINATING COMPANY, PROJECT NO. 2280

ORDER ISSUING LICENSE (MAJOR)

(Issued December 28, 1965)

On February 14, 1962 the Pennsylvania Electric Company filed an application for license under Section 4(e) of the Federal Power Act for the proposed Kinzua pumped storage development, Project No. 2280, to be located on the Allegheny River in Warren County, Pennsylvania at the U.S. Army Corps of Engineers Allegheny River Reservoir Project. The application was supplemented by a filing submitted June 26, 1963. On May 26, 1964 the Pennsylvania Electric Company and the Cleveland Electric Illuminating Company (hereinafter referred to as Applicants) filed a joint application supplementing the original application for license and amending it to become a joint application.

The pending joint application for license was preceded by a preliminary permit issued to the Pennsylvania Electric Company on May 3, 1961, 25 FPC 909. Prior to that time, an application for preliminary permit to investigate the feasibility of installation of certain generating facilities at this location had been filed by Warren Electric Cooperative, Inc. However, that application was withdrawn on October 12, 1961.

The Kinzua project, as proposed by Applicant would consist of pumped storage generating facilities with installed capacity of 325 megawatts to be constructed concurrently with the Army Engineers' Allegheny River Reservoir Dam now under construction.

The Secretary of the Army and the Chief of Engineers have stated that the plans of the structures affecting navigation are satisfactory, but have recommended for inclusion in any license for the project a number of special provisions relating to project design, construction and operation. License Articles 43 through 52 and Articles 24 and 29 of attached Form L-6 substantially incorporate most of the Corps' recommendations. The conditions recommended by the Corps which are not included in this license are those which appear to the Commission to be unnecessary under the circumstances. The Corps requested a condition that would have required the Applicants to obtain easements for the use of Corps lands before beginning construction of the project. Such a condition is unnecessary since the license itself constitutes permission

of the Government to enter onto and use the Government land necessary to the development of the project. The interests of the Government in the utilized lands are protected by other license conditions which control project activities on the land. Furthermore, provision is made in Article 58, paragraphs (ii) and (iii), for recompensing the Government for the use of its lands.

The Corps also requested inclusion of a condition absolving the United States from all liability for loss of life, for injury to persons, or for damage occasioned to the property of others by activities relating to the Kinzua pumped storage project. We are of the opinion that this condition is also unnecessary since Section 10(c) of the Federal Power Act expressly provides that the United States shall in no event be liable for damage to the property of others occasioned by the construction, operation or maintenance of licensed project works. Moreover, the exceptions to the Federal Tort Claims Act found in 28 U.S.C. section 2680 clearly indicate that no such action as is contemplated by the language of the Corps' proposed condition would lie against the United States.

The Department of the Interior by a series of letters, dated September 27, 1962, November 27, 1964 and July 7, 1965, recommended several special conditions for the protection and propagation of fish life in the Allegheny River Reservoir, and in the river below the Reservoir. It appears that the objectives of these recommended special conditions can be fully realized, however, under the provisions of Article 15 of attached Form L–6. Further special conditions designed to control erosion and to provide for salvage of archeological relics in the project area were also recommended by Interior. These recommendations are incorporated in this license as Articles 53 and 56.

The Department of Agriculture submitted its comments and recommendations with regard to this application for license, including special conditions providing for timber removal from Government lands, control of erosion and stream siltation, and suppression of wildfires. These conditions are embodied in Articles 53, 54, and 55. On June 22, 1965, Agriculture filed a "Memorandum of Understanding" which has been executed between the Applicants and the Forest Service with respect to implementation of these terms and conditions.

The Department of Health, Education, and Welfare has advised that the proposed project should not have any adverse effects on water supply or water quality control provided that plant operations are coordinated with scheduled releases of the Corps of Engineers so that no major downstream flow variations will result, and provided that provision is made for withdrawing reservoir waters at such levels as will provide water of as high a quality as possible. The Department recommends that the level or levels of withdrawal should be made a subject of negotiation with the Corps of Engineers. The interests of water supply and water quality control will be adequately served by the provisions of Article 44 of this license. This article provides a framework for such negotiations or other proceedings as may be necessary to develop reasonable rules and regulations governing project operations.

After reviewing plans for the design and construction of the proposed project, we have concluded that the proposed structures as set forth in the amended application can be made safe and adequate, and would be best adapted to the comprehensive development of the Allegheny River. In the interest of insuring the safety and adequacy of the project works, we are incorporating Articles 38 through 42 into this license. By these articles, we require special safety features such as a spillway for the upper reservoir and duplicate automatic means for shutting off pumping units, and we provide for comprehensive re-

view of project design and construction by a board of independent engineering consultants, and by ourselves.

With regard to the recreational aspects of Project No. 2280 we conclude that the Exhibit R filed as part of the application substantially meets the requirements of Section 4.41 of the Regulations under the Federal Power Act with respect to present recreational needs and should to that extent be made a part of the license. However, for the purpose of examining recreational possibilities which may develop in the future, we are including Article 57 which requires the filing of a revised Exhibit R within two years after the project goes into operation. The revised Exhibit R will set forth proposals prepared in cooperation with Federal, State and local agencies for a fuller future development of the recreational potential of the project. It will be noted that Article 57 is drafted to require the revised Exhibit R to include, among other things, proposals to take advantage of any recreational fishing opportunities that develop in the area downstream from the Army dam. This is specifically mentioned in the expectation that the release of cooler water from the project power plant will enhance the fishery immediately downstream, giving rise to increased recreational use.

A petition to intervene was filed April 20, 1962 by Allegheny Electric Cooperative, Inc., on behalf of its ten member cooperatives, stating that the public interest would best be served by the installation of power facilities at the Allegheny River Reservoir Project by the United States, rather than by private utility companies. The same position was taken by the Departments of Agriculture and Interior in their comments upon this application for license. Allegheny Electric Cooperative requested that this Commission defer the issuance of any license until after the publication of a report by the Corps of Engineers on the feasibility of Government installation of power generating facilities at the Allegheny River Reservoir.[1] The Cooperative also requested that it be given time to study this report when it appeared, and that the Commission hold hearings on this matter. We granted the Cooperative's petition to intervene by an order dated September 17, 1965 and afforded the Cooperative an opportunity to file, within thirty days from the date of the order, a statement of facts and law in support of its position. However, on the last day of the thirty-day period the Cooperative filed a "Motion for Extension of Time in Which to File Statement". In support of the motion it was argued that the Cooperative could not file any statement of fact or law until after it had had an opportunity to study the above-mentioned Corps report. The Applicants objected to the granting of any further extension of time, noting that substantial increases in construction costs would result if construction of the project were further delayed. Since there was no assurance that the awaited Corps report would be published within a reasonable time, on December 1, 1965, we denied the motion for extension of time to avoid holding this proceeding any longer in abeyance. However, we stressed that we would welcome the filing of any later statement of fact and law by the Cooperative provided such filing were made prior to our taking action on the license application. On December 13, 1965, the Cooperative requested leave to withdraw from these proceedings. This motion is granted in paragraph (G) of this order.

The substance of the Cooperative's position was, as we mentioned above, that the development proposed by Applicants is one that should be undertaken by the Government. The Secretary of Agriculture expressed this position in his April 9, 1963 letter to the Chairman and said:

[1] This report was requested by the Committee on Public Works, U.S. Senate, by resolution dated May 13, 1961.

> It would appear reasonable to assume that if installation of power facilities at this Federal dam, whether conventional or pumped storage is feasible for the applicant, it would be feasible for the Government.

The opposition to private development of the proposed project is apparently predicated on this assumption. However, the information before us indicates that this assumption may be unwarranted. The Corps of Engineers reported, in its letter of August 20, 1962, that at the time the Allegheny River Reservoir project was designed it was determined that a conventional power installation would not be feasible. This conclusion was borne out by an independent determination made by Applicants and reported in their amended application of May 26, 1964. However, the Applicants concluded that a pumped storage installation with ancillary conventional generation facilities would be feasible. Applicant's conclusions were confirmed by a Commission staff study of the subject. Thus the only project which appears feasible of development here at this time is primarily a pumped-storage installation.

A pumped-storage installation is primarily useful as a source of peaking capacity. But the need for a peaking plant of this size presupposes the existence of a fairly sizable load. This the Applicants have, since they are interconnected with the General Public Utilities (GPU) Integrated System. However, it does not appear that the Government has any such sizable load, actual or potential in this area, nor has the Government an available power supply for the pumping requirements of the project, and we are therefore of the opinion that this project is economically better suited to private development rather than development by the Government.

We do not intend to suggest, however, that Government development of any power facilities at the Allegheny River Reservoir would be forever infeasible. The existence and operation of Project No. 2280 does not preclude the subsequent installations of government hydro facilities, and changed circumstances in the future may indicate the feasibility of installing such facilities. To provide for this eventuality, we are including in the license, as Article 46, a condition absolving the United States from any liability for damages to Project No. 2280 arising out of construction activities related to the installation of Government power facilities.

The Commission finds:

(1) Applicants, Pennsylvania Electric Company and the Cleveland Electric Illuminating Company are corporations organized, respectively, under the laws of the Commonwealth of Pennsylvania and the State of Ohio. Both have submitted satisfactory evidence of compliance with all applicable State laws insofar as necessary to effectuate the purposes of a license for the project.

(2) Public notice of the filing of the application has been given. Except for the petition to intervene filed by Allegheny Electric Cooperative, Inc., no other formal protests or petitions to intervene have been received. No conflicting application is before the Commission.

(3) The project is located upon, and will affect, lands of the Allegheny National Forest.

(4) The project will utilize surplus water or waterpower from a Government dam, but the issuance of a license therefor, as hereinafter provided, will not affect the development of any water resources for public purposes which should be undertaken by the United States.

(5) Subject to the terms and conditions hereinafter imposed, the project will be best adapted to a comprehensive plan for improving or developing a waterway or waterways for the use or benefit of interstate or foreign com-

merce, for the improvement and utilization of waterpower development, and for other beneficial public uses, including recreational purposes.

(6) The installed horsepower capacity of the project hereinafter authorized for the purpose of computing the capacity component of the administrative annual charge is 473,000 horsepower and the amount of annual charges based on such capacity to be paid under the license for the project, for the costs of administration of Part I of the Act is reasonable.

(7) The exhibits designated and described in paragraph (B) following conform substantially to the Commission's rules and regulations and show the general characteristics of the project with respect to capacities of reservoirs, size of water passages, capacities of generating units and general design of structures, and should be approved as part of this license only insofar as they show these general characteristics. The Applicants should, as hereinafter provided, supply revised exhibits for Commission approval.

(8) The aforementioned Exhibit R conforms to the Commission's Regulations and should be approved as part of this license insofar as it relates to recreational needs.

The Commission orders:

(A) This license is hereby issued to the Pennsylvania Electric Company of Johnstown, Pennsylvania, and the Cleveland Electric Illuminating Company of Cleveland, Ohio (Licensees), under Section 4(e) of the Federal Power Act (Act) for a period of 50 years effective as of December 1, 1965, for the construction, operation and maintenance of Project No. 2280, affecting the United States Army Corps of Engineers' Allegheny River Dam and Reservoir and appurtenant lands and using water therefrom, and affecting as well lands of the United States within the Allegheny National Forest subject to the terms and and conditions of the Act and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) Project No. 2280 consists of:

(i) all lands constituting the project area and enclosed by the project boundary or the limits of which are otherwise defined, and/or interests in such lands necessary or appropriate for the purposes of the project, whether such lands or interests therein are held by the Licensees or by the United States; such project area and project boundary being more generally shown and described by certain exhibits which formed part of the application for license and which are designated and described as follows:

Exhibit J: (FPC No. 2280–2) GPU Integrated System (ii) Project works, which may be generally described as follows:

(1) *Upper Reservoir:* This is a high level 106-acre offstream reservoir above the left abutment of the Army Dam with a total capacity of 5,987 acre-feet of which 5,775 acre feet is usable power storage. The maximum operating water level of the reservoir is at elevation 2081.5 feet, with the minimum operating level at elevation 2020.0 feet. The upper reservoir is formed by a dam having maximum height of about 113 feet and approximately 2,380 feet long across the unnamed tributary of Bent Run, and a continuous rockfill impervious core dike approximately 6,430 feet long connecting the ends of the dam and completely encircling the reservoir.

(2) *Lower Reservoir:* Part of the project is the right subject to the terms and conditions of this license, to use the Allegheny River Reservoir (Kinzua), constructed and operated by the U.S. Army Corps of Engineers, with normal water surface regulation between elevations 1,260 and 1,355 feet. Normal tailwater below Allegheny River Reservoir is at approximate elevation 1,206 feet.

(3) *Pumping and Generating Facilities:* The pumping and generating station on the low left bank below the Allegheny River Reservoir Dam contains:

Unit No. 1—a reversible fixed-blade pump-turbine rated at 205,000 horsepower at 665 feet net head connected to a 150,000 kw motor generator. A conduit with 13 foot 3 inch inside diameter connects the unit to the Allegheny River Reservoir intake for pumping to the Upper Reservoir and for discharging into the Allegheny River Reservoir when generating.

Unit No. 2—A divided draft tube (DDT) unit with a reversible fixed-blade pump-turbine (rated at 205,000 horsepower at 665 feet net head when discharging from the Upper Reservoir into the Allegheny River Reservoir, but capable of producing 246,000 horsepower at 798 feet net head when discharging from the Upper Reservoir into the Allegheny River downstream from the Army Dam) connected to a motor generator (rated at 150,000 kw at 665 feet net head and 180,000 kw at 798 feet net head). A conduit with 13 foot 3 inch inside diameter is provided to allow use of the unit for pumping into the Upper Reservoir and discharging into the Allegheny River Reservoir and/or the Allegheny River below the Army Dam.

Unit No. 3—a high head turbine (HHT) of the conventional Francis type rated at 34,500 horsepower (25,000 kw) when operating at a head of 798 feet between the upper reservoir and discharging directly into the Allegheny River downstream from the Army dam.

A 19-foot diameter concrete and steel lined circular tunnel extends from a bellmouth intake in the floor of the upper reservoir a distance of about 2,400 feet to two bifurcations and three short steel penstocks leading to the three generating units. Each penstock contains a spherical valve near the entrance to each unit.

Other project works include transformers, a transmission line approximately 3,100 feet long, access roads, recreational and other appurtenant facilities.

The location, nature, and character of the project works are more specifically shown and described by exhibits which formed part of the application for license and which are designated and described as follows:

Exhibit L:

(FPC No. 2280–24) General Layout
(FPC No. 2280–25) High Head Conduit
(FPC No. 2280–26) Pumping and Generating Station Vicinity
(FPC No. 2280–27) Pumping and Generating Station–1
(FPC No. 2280–28) Pumping and Generating Station–2
(FPC No. 2280–29) Lower Hydraulic Structures
(FPC No. 2280–30) Upper Hydraulic Structures

Exhibit M: Three typewritten sheets entitled "General Description and Specification of Equipment", filed with the Commission October 12, 1964.

(iii) All other structures, fixtures, equipment as facilities used or useful in the maintenance and operation of the project and operation of the project and located on the project area, including such portable property as may be used or useful in connection with the project or any part thereof, whether located on or off the project area, if and to the extent that the inclusion of such property as part of the project is approved or acquiesced in by the Commission, also all riparian or other rights, the use or possession of which is necessary or appropriate in the maintenance or operation of the project.

(C) This license is also subject to the terms and conditions set forth in Form L–6 (revised November 1, 1963) entitled "Terms and Conditions of License for Unconstructed Major Projects Affecting Navigable Waters and Lands of the United States" (31 FPC 284) which terms and conditions desig-

nated as Articles 1 through 37 are attached hereto and made a part hereof, except for Articles 5, 6, 7, 8, 19, 26 and 27, and subject to the following special conditions set forth herein as additional articles:

Article 38. The Licensees shall provide a spillway for the upper reservoir capable of discharging a flow equal to the total continuous pumping rate of flow from all pumping units, and the dam and dikes surrounding the upper reservoir shall be built to a height that will provide at least three feet of freeboard above the surcharge elevation which would result from such pumping.

Article 39. The Licensees shall provide at the Kinzua plant duplicate automatic means for stopping the units from pumping when the water level of the upper reservoir exceeds Elevation 2081.5 feet.

Article 40. The Licensees shall retain a board of independent engineering consultants to review for safety and adequacy the specifications, design, and construction of project works. Among other things, the board shall assess the proposed plans for the upper reservoir dikes and the suitability and treatment of the dike foundations and of the reservoir floor. The board shall also examine the specifications, design, and construction of the powerhouse, high-head tunnel and shaft to assure that there will be no seepage into surrounding rock that might endanger the Army Dam or other parts of the project. In connection with its review of plans and construction of project works, the board shall, if necessary, conduct special studies, including hydraulic model studies for the bell-mouth intake in the upper reservoir. The board shall submit a report to the Commission concerning each portion of the project prior to the submittal of the revised Exhibit L drawings therefor. The board shall also submit a final report covering the construction of the project, and the Licensees shall receive Commission approval prior to the filling of the upper reservoir.

Article 41. The Licensees shall submit to the Commission a stability analysis of the typical dike section for the upper reservoir, using actual friction and cohesion factors for the materials to be used in the construction of the dikes. The Licensees shall receive the approval of the Commission before beginning construction of the dikes.

Article 42. The Licensees shall submit in accordance with the Commission's rules and regulations revised Exhibit L drawings showing the final designs of project works, and the Licensees shall not begin construction of any project structure until the Commission has approved such exhibits therefor.

Article 43. The Licensees shall, prior to initiating construction, furnish plans and specifications to the District Engineer, U.S. Army Engineer District, Pittsburgh, Pennsylvania, for approval of features which could affect the Government's structures and project operations, and shall agree to such changes as determined to be necessary and reasonable.

Article 44. The United States specifically retains and safeguards the right to regulate reservoir releases, either through the facilities of the Licensees or through facilities of the Government, in such amount, to be determined by the Secretary of the Army, as may be necessary for the purposes of flood control and low-flow regulation of the Allegheny River Reservoir Project; and the operations of the Licensees, so far as they affect the use, storage, and discharge from storage of waters in the Allegheny River Reservoir, shall at all times be controlled by such reasonable rules and regulations as the Secretary of the Army may prescribe in the interest of authorized Reservoir purposes, and as the Commission may prescribe in the interests of life, health, property, and the fullest practicable conservation and utilization of such waters for other beneficial public purposes, including recreational purposes. Licensees shall release water through their facilities at such rate in cubic feet per second, or

in such volume in acre feet per specified period of time, as the Secretary of the Army may prescribe in the interest of Allegheny River Reservoir Project purposes, or as the Commission may prescribe for the other purposes hereinbefore mentioned. No water shall be released through Government facilities when facilities of the Licensees are available for such release and when Licensees' operating requirements are such that release through the Licensees' facilities would be beneficial to the Licensees and when release through Licensees' facilities would result in downstream water temperatures generally similar to those which would result from releases through the Government's facilities. Procedures for the purpose of preventing impairment of the authorized functions of the Allegheny River Reservoir Project shall be as specified in an operating agreement entered into by the Licensees and the District Engineer, U.S. Army Engineer District, Pittsburgh, Pennsylvania prior to the operation of the Licensees' project; *Provided*, That such agreement shall be subject to review from time to time as requested by either party; and *Provided further*, That in the event that the Licensees and the District Engineer should fail to reach agreement with regard to such procedures, the Commission will, upon the motion of either party, or upon its own motion, prescribe necessary procedures and regulations, after notice and opportunity for hearing.

Article 45. The Licensees shall reimburse the United States for actual separable costs including interest, of provisions made by the Corps of Engineers for installation of power facilities by the Licensees. Reimbursable costs shall include engineering and design costs incurred by the Government. Details pertinent to the amount and terms of the reimbursement shall be specified in a formal agreement to be entered into by the Licensees and the District Engineer, U.S. Army Engineer District, Pittsburgh, Pennsylvania. In the event that agreement cannot be reached, the Commission will determine the amount of such reimbursement, after notice and opportunity for hearing.

Article 46. In the event that construction by the Government of hydro-electric facilities at the Allegheny River Reservoir Project is subsequently authorized, the Government shall be released from all liability for damage or operational difficulties sustained by the Licensees due to such construction activities, or to conditions necessitated by such construction activities.

Article 47. The Government shall be released from all liability for damages or operational difficulties sustained by the Licensees due to the construction or operation of the Allegheny River Reservoir, including, but not limited to, loss or damage due to: timing of release or impoundment of water in the reservoir, change in water levels because of drought, flood or other causes, or loss of head resulting from reservoir operations or from reallocation of storage for Allegheny River Reservoir Project functions; *Provided, however*, that any such reallocation of storage for Project functions shall take cognizance of the reasonable requirements of the Licensees.

Article 48. The Licensees shall be liable for any loss of Allegheny River Reservoir Project benefits that may occur as a result of construction, maintenance, or operation of the Licensees' project, including but not limited to, losses arising from increased evaporation and leakage. In the event that the Licensees and the District Engineer, U. S. Army Engineer District, Pittsburgh, Pennsylvania, are unable to agree on the amount of compensation Licensee should pay to the Government for such loss, the Commission will determine the compensation to be made, after notice and opportunity for hearing.

Article 49. Whenever the United States shall desire to construct, complete, or improve facilities in connection with the Allegheny River Reservoir Project,

the Licensees shall allow such right of passage through their project area and facilities, and shall permit such control of their facilities, consistent with the primary purpose of Licensees' project, as may be found necessary by the Commission after notice and opportunity for hearing.

Article 50. Upon request by the Chief of Engineers, and after notice and opportunity for hearing, the Commission may order the Licensees to construct at their own expense remedial works in the river below the Army dam in order to protect Government project structures by deflecting the current caused by discharge from Licensees' powerplant. The design, location, and time of construction of such remedial works shall be recommended to the Commission by the Chief of Engineers.

Article 51. Upon its own motion, or upon request by the Chief of Engineers, the Commission may, after notice and opportunity for hearing, require that the Licensees construct at their own expense any and all warning signs, devices, and barrier structures in the vicinity of the reservoir intake structures which may be found necessary to prevent conditions hazardous to persons utilizing the surrounding waters of the reservoir.

Article 52. Insofar as any material is dredged or excavated in the prosecution of any work authorized under this license, or in the maintenance of the project, such material shall be removed and deposited so it will not interfere with operation of the Allegheny Reservoir Project, and will be to the satisfaction of the District Engineer, U. S. Army Engineer District, Pittsburgh, Pennsylvania.

Article 53. The Licensees shall be responsible for preventing soil erosion and stream siltation that may be caused by construction, operation, or maintenance of the project; shall revegetate and keep vegetated with grass or herbaceous plants all ground where the soil has become exposed by project activities, and shall maintain all terracing, water bars, lead-off ditches, or other preventive works that may be required to accomplish this result as may be prescribed by, and to the reasonable satisfaction of, the agency of the United States having jurisdiction over the lands affected.

Article 54. The Licensees shall do everything reasonably within their power and shall require their employees, contractors and employees of contractors to do everything reasonably within their power, both independently and upon the request of officers of the agency concerned, to prevent, make advance preparations for suppression, and suppress fires on the lands to be occupied or used under the license. The Licensees shall be liable for and shall pay the costs incurred by the United States in suppressing fires caused by the construction, operation, or maintenance of the project works or of work appurtenant or accessory thereto under the license.

Article 55. Timber on lands of the United States cut, used, or destroyed in the construction and maintenance of the project works, or in the clearing of said lands, shall be paid for and the resulting slash and debris disposed of in accordance with the requirement of the agency having jurisdiction over said lands. Payment for merchantable timber will be at current stumpage rates, and payment for young growth timber below merchantable size will be at current damage appraisal value. However, the agency having jurisdiction may sell or dispose of the merchantable timber to others than the Licensees, with the provision that timber so sold or disposed of will be cut and removed from the area prior to or without undue interference with clearing operations of the Licensees and in coordination with project construction schedules. Such sale or disposal to others will not relieve the Licensees of the responsi-

bility for the clearing and disposing of all slash and debris from project lands.

Article 56. The Licensees shall consult with the Carnegie Museum of Pittsburgh regarding possible archeological values in the project area, and shall furnish funds in a reasonable amount to be approved by the Commission to survey or salvage archeological relics, if any.

Article 57. The Licensees shall, within two years after the project is ready for operation, file for Commission approval a revised Exhibit R in conformance with the requirements of Section 4.41 of the Commission's Regulations under the Federal Power Act. The revised Exhibit R shall be prepared in cooperation with the U. S. Army Corps of Engineers, the U. S. Forest Service, and other interested Federal, State, and local agencies, and shall contain, among other things, proposals to take advantage of any recreational fishing opportunities that develop in the area downstream from the Army dam.

Article 58. The Licensees shall pay to the United States the following annual charge beginning on the day the license becomes effective:

(i) For the purpose of reimbursing the United States for the costs of administration of Part I of the Act, a reasonable annual charge as determined by the Commission, in accordance with its regulations, in effect from time to time. The authorized installed capacity for such purposes is 473,000 horsepower.

(ii) For the purpose of recompensing the United States for the use, occupancy and enjoyment of its land within the Allegheny National Forest for project purposes (including transmission lines) an amount to be hereafter determined by the Commission.

(iii) For the purpose of recompensing the United States for the use of a Government Dam and reservoir, and for the utilization of surplus water or water power and lands in connection therewith, an amount to be hereafter determined by the Commission. Such an amount will be based on the sharing of power benefits.

Article 59. The Licensees shall commence construction within two years from the date of issuance of this license, shall thereafter in good faith and with due diligence prosecute such construction, and shall complete the project and place it in operation within five years from the date of issuance of this license.

(D) The exhibits designated in paragraph (B) above are approved and made a part of the license to the extent indicated in finding (7) above.

(E) The Exhibit R (FPC No. 2280–31) filed with the Commission May 28, 1965 is approved subject to the provisions of Article 57, and is made a part of the license to the extent indicated in finding (8) above.

(F) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license. In acknowledgment of the acceptance of this license, it shall be signed for the Licensees and returned to the Commission within 60 days from the date of issuance of this order.

(G) The motion filed by the Allegheny Electric Cooperative, Inc., on December 13, 1965, for leave to withdraw from these proceedings, is hereby granted.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

CITY OF TACOMA, WASHINGTON, PROJECT NO. 2016

ORDER APPROVING REVISED PROJECT EXHIBIT L DRAWINGS

(Issued December 28, 1965)

On April 8, 1965, City of Tacoma, Washington, licensee for Project No. 2016, filed for Commission approval revised Exhibit L drawings relating to the proposed Mossyrock Development which, along with the constructed Mayfield development comprise the Cowlitz River Development designated as Project No. 2016. The filings were submitted pursuant to the requirements of Articles 47, 48 and 49 of the amended license.

The Board of Consultants, employed by licensee pursuant to Article 46 of the license as amended by order issued November 17, 1964, 32 FPC 1327, has reviewed and reported on the designs and specifications of the Mossyrock dam, the suitability and treatment of rock foundations and abutments, the treatment of the reservoir to minimize leakage, the design of a suitable spillway and associated means for preventing foundation and abutment erosion, and the design of the powerhouse structure and associated project works. The aforementioned Board reviewed and approved the designs and specifications shown on the revised Exhibit L drawings, which have also been reviewed and considered as adequate by Commission staff, provided certain recommended minor changes are made as a result of further foundation exploration. These changes involve a small amount of additional excavation in the left abutment which has been substantially completed and provision for drainage thereof which the licensee has agreed to undertake. The licensee is presently in a position where designs have been formulated to the point where required prior Commission approval of the revised Exhibit L drawings is sought to permit the licensee to proceed with construction of the Mossyrock development. By letter dated January 15, 1965, the licensee was advised that it would be satisfactory if final stress analyses and structural model reports be submitted to the Commission after the dam foundation is exposed prior to placement of concrete, and that minor changes in design could continue until construction commences.

In accordance with present standard engineering practice, the dam will contain sensitive instruments to check on its performance during construction and following the filling of the reservoir to measure: (1) foundation stresses and movements; (2) dam deflections under load; (3) stresses and temperatures in the concrete; and (4) the opening of construction joints to assist in the program of grouting of the dam. Such dam instrumentation is required by special Article 55 herein.

The model studies and analysis of the spillway required to be made by Article 47 of the license resulted in modification of the spillway design in order to minimize erosion below the spillway. In order to afford a check on possible future erosion below the dam following major floods, we are by special Article 56 herein, requiring the licensee to explore the stilling basin below the spillway after each discharge which exceeds 50,000 cfs, which is about the magnitude of the flood that occurred in December, 1964.

The Commission finds:

(1) The following described revised Exhibit L drawings conform to the Commission's rules and regulations and should be approved as part of the license for the project:

Exhibit L	*FPC No.*	*Title Cowlitz Power Development Mossyrock*
Sheet 1	2016–92	General Plan.
Sheet 2	2016–93	General Sections.
Sheet 5	2016–96	Powerhouse Plan El. 395.00.
Sheet 6	2016–97	Powerhouse Plan El. 433.00.
Sheet 7	2016–98	Powerhouse Plan El. 455.00.
Sheet 8	2106–99	Powerhouse Plan El. 475.00.
Sheet 9	2016–100	Powerhouse Transverse Section.
Sheet 10	2016–101	Powerhouse Longitudinal Section.

(2) License Exhibit L drawings, Sheets 1, 2, 5, 6, 7, 8, 9 and 10 (FPC Nos. 2016–80, 81, and 84 through 89, respectively), which have been superseded, should be eliminated from the license for the project.

The Commission orders:

(A) The revised Exhibit L drawings designated and described in finding (1) above are hereby approved as part of the license for Project No. 2016, and the superseded exhibits described in finding (2) above are hereby eliminated from the license for the project.

(B) The following special articles are hereby included in the license for the project:

Article 55. The Licensee shall install instruments in the dam and foundation for the purpose of measuring foundation stresses and movements, deflections of the dam, and stresses and temperatures in the concrete, and shall submit to the Commission annually, for a period of five years after completion of construction of the Mossyrock dam, reports evaluating the results of the instrumentation.

Article 56. After each spillway discharge exceeding 50,000 cfs, the Licensee shall explore the stilling basin below the Mossyrock dam and submit a report to the Commission evaluating the performance of the stilling basin.

(C) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this order. In acknowledgment of the acceptance of this order, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

ARKANSAS LOUISIANA GAS COMPANY, DOCKET NO. CP66–72

DECLARATION OF EXEMPTION

(Issued December 29, 1965)

Arkansas Louisiana Gas Company (Applicant) filed an application on September 13, 1965, for exemption from the provisions of the Natural Gas Act, pursuant to Section 1(c) thereof, of natural gas facilities constituting its Helena System in the State of Arkansas.

Applicant, a Delaware corporation with its principal place of business in Shreveport, Louisiana, is engaged in the transportation and sale of natural

gas in the State of Arkansas, and as such operates several separate and unrelated transmission pipeline systems for the transportation and sale of natural gas in interstate commerce subject to the jurisdiction of the Commission.

The Helena System which Applicant requests exemption for consists of natural gas facilities acquired from MidSouth Gas Company on October 31, 1961, and which has since been operated in accordance with the authority of a Certificate of Public Convenience and Necessity issued by the Commission to Applicant by its order entered October 19, 1961, in Docket No. CP61–334, 26 FPC 591. The system is comprised of about 40 miles of 12-inch gas pipeline extending from the delivery point by Texas Gas Transmission Corporation (Texas Gas) near the City of Helena, Arkansas, in a northwesterly direction to the delivery station for Arkansas Power & Light Company's Hamilton Moses generating station near the Town of Forrest City, St. Francis County, Arkansas, together with approximately 48 miles of 3-inch, 4-inch, and 6-inch gas pipelines extending east and northeast to the put-in stations for Applicant's gas distribution plants in Forrest City, Caldwell, Colt and Wynne, and extending west from the Hamilton Moses plant to Applicant's Palestine, Wheatley, Brinkley and Cotton Plant gas distribution plants, all in the State of Arkansas.

Applicant states that all of the gas transported by its Helena System is received in the State of Arkansas at Texas Gas' Helena put-in station and is consumed in the State of Arkansas. A portion of the gas so consumed is purchased by Arkansas Power & Light Company from Texas Gas and is transported by Applicant under its Rate Schedule XT–22, Applicant's FPC Gas Tariff, First Revised Volume No. 2, sheets 22–40. The balance from Texas Gas, received by Applicant at the Helena put-in station, and sold through its retail gas distribution systems in the Arkansas communities of Helena, West Helena, Marianna, Felton, Haynes, Forrest City, Caldwell, Colt, Wynne, Palestine, Wheatley, Brinkley and Cotton Plant and to rural consumers adjacent thereto. Applicant now proposes to supply 15 percent of the system requirements from its own intrastate system in addition to the gas supplied by Texas Gas.

The Arkansas Public Service Commission has certified to the Federal Power Commission that it has regulatory jurisdiction over the rates, service and facilities of the Applicant and is exercising such jurisdiction.

Wherefore, the Commission declares, by reason of the foregoing:

The Helena System of Applicant, Arkansas Louisiana Gas Company, is exempt from the provisions of the Natural Gas Act, and the orders, rules, and regulations of the Commission issued thereunder.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

ARKANSAS LOUISIANA GAS COMPANY, DOCKET NO. CP66–73

FINDINGS AND ORDER AFTER STATUTORY HEARING PERMITTING AND APPROVING ABANDONMENT AND ACCEPTING FOR FILING NOTICE OF CANCELLATION OF TARIFF SHEETS

(Issued December 29, 1965)

On September 13, 1965, Arkansas Louisiana Gas Company (Applicant) filed in Docket No. CP66–73 an application and an amendment thereto on October

25, 1965, pursuant to Section 7(b) of the Natural Gas Act for permission and approval to abandon the transportation service being rendered Arkansas Power & Light Company under Applicant's FPC Gas Rate Schedule XT–22 of its FPC Gas Tariff, First Revised Volume No. 2, Sheets 22–40, as more fully set forth in the application.

Applicant by the instant application seeks to abandon a service being rendered under the terms of a service agreement dated November 17, 1952, originally executed by and between MidSouth Gas Company and Arkansas Power & Light Company, and assumed by Applicant upon acquisition of the facilities of MidSouth Gas Company under certificate authorization issued by the Commission in Docket No. CP61–334 on October 19, 1961, 26 FPC 591.

The proposed abandonment of service stems from Applicant's request in Docket No. CP66–72 (filed September 13, 1965) for an order declaring the facilities acquired from MidSouth to be exempt from the jurisdiction of the Commission pursuant to Section 1(c) of the Natural Gas Act. The said facilities sought to be exempted constitute Applicant's Helena System, are operated separately from Applicant's main transmission pipeline system, and are utilized in part in the transportation of natural gas received from Texas Gas Transmission Corporation near Helena, Arkansas, for Arkansas Power & Light Company.

In addition to the transportation service being rendered Arkansas Power & Light Company proposed to be abandoned, Applicant provides natural gas to a number of towns from the Helena System, for all of which Applicant purchases natural gas from Texas Gas under Texas Gas' Rate Schedule G–1. Applicant and Texas Gas entered into a new service agreement, dated July 1, 1965, which superseded an agreement dated November 1, 1964. Under the new agreement Applicant is permitted to furnish up to 15% of the annual gas requirements of the distribution systems on the Helena System from its own pipelines. The superseding service agreement was filed by Texas Gas as parts of its FPC Gas Tariff, Revised Volume No. 1, Revised Sheet No. 110. Notice of Cancellation of Applicant's FPC Rate Schedule XT–22 to its FPC Gas Tariff, First Revised Volume No. 2, sheets 22–40 (Arkansas Power & Light transportation service) was filed on September 13, 1965, to be effective upon the effective date of an order thereon.

Applicant proposes a future interconnection of its Helena System with an intrastate portion of its existing pipeline system at a point of crossing near Goodwin in St. Francis County, Arkansas.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on December 22, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence including the application, amendment, and exhibits, submitted in support of the authorization sought, and upon consideration of the record,

The Commission finds:

(1) Applicant, Arkansas Louisiana Gas Company, a Delaware corporation having its principal place of business in Shreveport, Louisiana, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of January 26, 1943, in Docket No. G–252 (3 FPC 910).

(2) The transportation service rendered Arkansas Power & Light Company proposed to be abandoned, as hereinbefore described, and as more fully described in the application herein, utilizes the natural gas facilities of Ap-

plicant in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and such abandonment is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(3) The proposed abandonment of the aforesaid transportation service is permitted by the public convenience and necessity and approval therefor should be granted as hereinafter ordered.

(4) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Notice of Cancellation of Applicant's FPC Gas Rate Schedule XT–22, FPC Gas Tariff, First Revised Volume No. 2, Sheet Nos. 22–40, filed on September 13, 1965, be accepted for filing effective as of the date of this order.

The Commission orders:

(A) Permission for and approval of the abandonment of the transportation service hereinbefore described, as more fully described in the application in this proceeding is granted to Applicant.

(B) Arkansas Louisiana Gas Company's Notice of Cancellation of its FPC Rate Schedule XT–22, FPC Gas Tariff, First Revised Volume No. 2, Sheet Nos. 22–40, filed on September 13, 1965, be accepted for filing effective as of the date of this order.

(C) Applicant shall advise the Commission of the date of abandonment of service as authorized in paragraph (A) above within ten days of such abandonment.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

ARKANSAS LOUISIANA GAS COMPANY, DOCKET NO. CP66–138

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued December 29, 1965)

On October 29, 1965, Arkansas Louisiana Gas Company (Applicant) filed in Docket No. CP66–138 an application pursuant to Section 7(c) of the Natural Gas Act, as implemented by Section 157.7(c) of the Regulations under the Act, for a certificate of public convenience and necessity authorizing the construction during the calendar year 1966 and the operation of natural gas facilities for the sale of natural gas to direct customers and distribution customer consumers and for miscellaneous rearrangements not resulting in any change of service rendered by means of the facilities involved, all as more fully set forth in the application in this proceeding.

Applicant proposes to construct approximately 200 pipeline taps on its existing system to deliver natural gas to individual domestic and commercial customers or for new town border connections or rural extensions to consumers and approximately 220 pipeline taps, and under proper conditions service lines or market laterals, for direct sales to types of consumers as set forth in the subject application, in areas outside of local distributors' franchise areas. Applicant also proposes to construct facilities necessary for a maximum of 25 miscellaneous rearrangements.

The total cost of facilities proposed under this application will not exceed a maximum of $300,000 and the total deliveries to any one customer will not exceed a maximum of 100,000 Mcf of natural gas per year.

The application indicates that the construction projects for which authorization is requested will not increase the capacity of Applicant's transmission systems and will not provide for any additional or increased gas sales volumes under jurisdictional rate schedules. Further, none of the gas delivered pursuant to this order will be used by any customer for boiler fuel purposes, as defined by subparagraph (9) of Section 157.7(c) of the Commission's Regulations.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on December 2, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Arkansas Louisiana Gas Company, a Delaware corporation having its principal place of business in Shreveport, Louisiana, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of January 26, 1943, in Docket No. G-252 (3 FPC 910).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation and/or sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(6) The authorization hereinafter granted should be limited to construction during the calendar year 1966 and the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $300,000, with the total deliveries to any one customer not to exceed a maximum of 100,000 Mcf of natural gas per year.

(7) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit within 60 days after the expiration of the authorization granted hereinafter, a statement in compliance with Section 157.7(c)(8) of the Commission's Regulations under the Natural Gas Act.

(8) The certificate issued hereinafter should be conditioned upon Applicant's compliance with the provisions of Section 157.7(c)(7) of the aforesaid Regulations.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity is issued authorizing Applicant, Arkansas Louisiana Gas Company, to construct during the calendar year 1966 the proposed

facilities hereinbefore described, as more fully described in the application in this proceeding, and to operate such facilities for the sale of natural gas and for miscellaneous rearrangements as hereinafter provided.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(C) The authorization granted in paragraph (A) above is limited to construction during the calendar year 1966 and the total expenditures for facilities to be constructed thereunder are limited to a maximum of $300,000, with the total deliveries to any one customer limited to a maximum of 100,000 Mcf of natural gas per year.

(D) Applicant shall submit within 60 days after the expiration of the authorization granted by paragraph (A) above a statement in compliance with Section 157.7(c)(8) of the Commission's Regulations under the Natural Gas Act.

(E) The certificate issued by paragraph (A) above is expressly conditioned upon Applicant's compliance with the provisions of Section 157.7(c)(7) of the aforesaid Regulations and, further, the certificate is granted upon the express condition that any interruptible service resulting herefrom shall be curtailed or interrupted to the extent required to meet existing or future contracted maximum delivery obligations of Applicant for firm service to its customers.

(F) This certificate shall not entitle any industrial customers to whom firm deliveries are authorized herein to any priorities or rights to additional gas for meeting future increases in their requirements at the expense of resale customers desiring to acquire additional gas to meet any future increases in their requirements.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

CALAVERAS COUNTY WATER DISTRICT, PROJECT NO. 2409; TUOLUMNE COUNTY WATER DISTRICT NO. 2, PROJECT NO. 2410

ORDER PERMITTING WITHDRAWAL OF APPLICATION FOR LICENSE AND WITHDRAWAL OF PROTEST

(Issued December 29, 1965)

By an agreement dated November 15, 1965, Calaveras County Water District and Tuolumne County Water District No. 2, applicants for license for mutually exclusive Project Nos. 2409 and 2410, have resolved their differences, including, it appears some conflicting claims to water rights under State law. By letter dated November 24, 1965, which forwarded a copy of the aforesaid agreement to the Commission and to all of the parties in these consolidated proceedings, Tuolumne requests permission to withdraw its application for license for proposed Project No. 2410 and its protest against proposed Project No. 2409.

The Commission orders:

Permission for withdrawal of the application for license for Project No. 2410 and withdrawal of the protest of Tuolumne County Water District No. 2 against proposed Project No. 2409 is hereby granted.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

DEL NORTE NATURAL GAS COMPANY, DOCKET NO. CP66-104; SOUTHERN UNION GAS COMPANY, DOCKET NO. G-513

ORDER AUTHORIZING EXPORTATION OF NATURAL GAS, TERMINATING AUTHORIZATION TO EXPORT NATURAL GAS AND DENYING PETITION FOR LEAVE TO INTERVENE

(Issued December 29, 1965)*

On October 12, 1965, Del Norte Natural Gas Company (Applicant) filed in Docket No. CP66-104 an application, as supplemented on November 18, 1965, pursuant to Section 3 of the Natural Gas Act for authorization to export natural gas from the United States to Mexico, all as more fully set forth in the application as supplemented.

Applicant proposes to export natural gas as successor in interest to Southern Union Gas Company (Southern Union) which was authorized to export natural gas by order issued January 2, 1945, in Docket No. G-513 (4 FPC 826). Concurrently with the subject application Applicant filed in Docket No. CP66-106 an application pursuant to Executive Order No. 10485 for a permit authorizing the operation and maintenance of facilities at the international boundary for the exportation of gas. On October 18, 1965, Southern Union filed in Docket No. G-513 an application for revocation of its Presidential Permit and authorization to export natural gas.

Applicant will sell natural gas to Juarez Gas Company, S.A. (Juarez Gas), the sole distributor presently serving Cuidad Juarez, Chihuahua, Mexico, and will initiate the sale and delivery of natural gas to Gas Natural de Juarez, S.A. (Gas Natural), a new distributor which will render natural gas service in Juarez. Estimated peak day and annual natural gas requirements of Juarez Gas and Gas Natural in Mcf for the first three years of operation by Applicant are estimated[1] as follows:

	First year	Second year	Third year
JUAREZ GAS			
Annual	367,500	378,000	388,500
Peak day	4,084	4,819	4,935
GAS NATURAL			
Annual	2,543,153	2,765,028	3,036,138
Peak day	15,230	18,037	21,084

The rates proposed to be charged Gas Natural are 1.6243 cents per cubic meter for all gas resold by said company for domestic and commercial use and 1.2535 cents per cubic meter for all gas resold by said company for industrial use. The rates proposed to be charged Juarez Gas are 34.85 cents per Mcf plus 50 percent of the excess above 40.85 cents per Mcf charged by Juarez Gas to ultimate consumers, including any minimum charge and any demand or readiness-to-serve charge, for gas sold for industrial use and 45.35

*Order issued February 1, 1966 denying rehearing and stay, 35 FPC 174.

[1]These estimates are contained in Exhibit I to the application filed in Docket No. CP66-105 by El Paso Natural Gas Company and El Paso Gas Transportation Corporation. These companies propose to sell and deliver gas to Applicant for resale and exportation.

cents per Mcf for gas sold for all other purposes. There is a minimum charge of $25.00 per month per industrial customer.

Applicant will export gas through facilities leased from Southern Union. Southern Union has assigned to Applicant Southern Union's rights under its contract with Juarez Gas.

Concurrently herewith a permit authorizing Applicant to maintain and operate facilities at the international boundary will be released in Docket No. CP66–106, and El Paso Natural Gas Company and El Paso Gas Transportation Corporation will be authorized in Docket No. CP66–105 to sell and deliver natural gas to Applicant for resale and exportation. Southern Union's Presidential Permit and authorization to export natural gas will be revoked.

After due notice no notice of intervention has been received. On November 5, 1965, Juaraz Gas filed in Docket Nos. G–513, CP66–104, CP66–105 and CP66–106 a petition for leave to intervene in opposition to the granting of the application in each docket. Juarez Gas contends that it is not consistent with the public interest to authorize the exportation of natural gas under Section 3 of the Act for the purpose of enabling a new and second distribution company to invade the franchise territory of an existing supplier. The Commission cannot assume the obligation of determining local franchise rights in Mexico. It is not the purpose of regulation under the Natural Gas Act to deal with franchise rights relating to the distribution of natural gas in foreign countries. In fact, we have held that it is not within the Commission's province to determine which of two distributors in the United States has the legal right to distribute natural gas in a community within a state where the issue has been raised. We have left the resolution of such controversies to the appropriate authorities of the state where the parties operate. *See American Louisiana Pipe Line Company, et al.*, Docket No. G–2306, *et al.* (28 FPC 41).

Juarez Gas alleges that Gas Natural is a "purely paper company", that the applications make no showing that Gas Natural will be able to dispose of the gas exported by Applicant, that it is probable that Gas Natural will not be able to secure all of the federal, state and municipal authorizations to distribute gas, and that the import authorization will be denied. Exhibits to the application filed in Docket No. CP66–105 indicate that Gas Natural has already begun construction of its distribution system under appropriate Mexican authorizations. The supplement filed November 18, 1965, to Applicant's applications indicates that some of the construction has been completed and that various authorizations have been received to undertake more construction. These are matters within the jurisdiction of the appropriate Mexican authorities and this Commission will not review them. The authorization issued to Applicant is conditioned upon the receipt of appropriate import authorization and is without prejudice to any action taken by any authority in Mexico.

The Federal Power Commission is not the proper forum in which Juarez Gas can receive relief from the alleged detriments to it occasioned by the distribution of natural gas by Gas Natural. This is, in essence, what Juarez Gas is seeking by its request to participate in these proceedings. Any determinations made by Mexican authorities having jurisdiction over such matters will be accepted by this Commission. Juarez Gas has failed to demonstrate that it has any interest in the subject applications which this Commission can consider, and it has failed to show any other reasons why it should be permitted to participate. Accordingly, the petition will be denied in each docket in which it is filed.

312–270—69——103

No petitions to intervene other than that filed by Juarez Gas have been received in Docket No. CP66–104.

The Commission finds:

The exportation of natural gas by Applicant, Del Norte Natural Gas Company, as hereinabove described and as more fully set forth in the application, as supplemented, in Docket No. CP66–104, will not be inconsistent with the public interest within the meaning of Section 3 of the Natural Gas Act provided that said exportation be on the terms and conditions hereinafter set forth:

(a) Applicant shall file statements or reports with the Commission from time to time under oath and in such details as the Commission may require with respect to the whole or any part of the instant export operation.

(b) The authorization granted herein is not transferable or assignable and shall remain in full force and effect only so long as Applicant continues the acts or operations herein authorized in accordance with the terms and conditions herein set forth.

(c) The authorization granted herein shall automatically terminate upon the termination or expiration of the contracts between Applicant and the gas purchasers attached as exhibits to or incorporated by reference in the subject application.

(d) Applicant shall not, during the term of the authorization granted by this order, materially change or alter its export operations without first obtaining the permission and approval of the Commission.

(e) In the event that Applicant should abandon or permanently cease for any reason whatsoever all or any part of the instant export operation prior to the termination dates of the contracts described in (c) above, Applicant shall forthwith notify the Commission of said fact and the reason therefor.

(f) The authorization granted herein is conditioned upon Applicant's obtaining any necessary authorizations to import gas into the Republic of Mexico.

(g) The annual and peak day volumes of natural gas exported and sold by Applicant shall not exceed 3,424,638 Mcf and 26,019 Mcf, respectively.

The Commission orders:

(A) Authorization is granted to Applicant to export natural gas from the United States to the Republic of Mexico, as hereinabove described and as more fully set forth in the application, as supplemented, in Docket No. CP66–104, upon the conditions herein set forth and subject to the provisions of the Natural Gas Act and the Commission's Regulations issued thereunder.

(B) The authorization granted herein is conditioned upon Applicant's obtaining and is without prejudice to any authorizations issued by the Republic of Mexico for the importation of natural gas.

(C) The annual and peak day volumes of natural gas exported and sold by Applicant shall not exceed 3,424,638 Mcf and 26,019 Mcf, respectively.

(D) The export authorization heretofore issued in Docket No. G–513 is terminated as of the date Applicant commences the service authorized herein.

(E) Inasmuch as Juarez Gas has not shown that its participation in the proceedings in Docket Nos. G–513, CP66–104, CP66–105 and CP66–106 is in the public interest or that the matters set forth in the petition affect interstate commerce or can properly be considered by the Commission in determining the merits of the subject applications, the petition is denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP66-49

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued December 29, 1965)

On August 13, 1965, El Paso Natural Gas Company (Applicant) filed in Docket No. CP66-49 an application and a supplement thereto on October 18, 1965, pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the modification of Applicant's McMinnville-Amity Meter Station in Marion County, Oregon, to increase the capacity thereof and to sell additional gas to Northwest Natural Gas Company (Northwest) for initiation of natural gas service to six communities in Oregon, all as more fully set forth in the application and supplement thereto.

Northwest, an existing resale customer of Applicant, proposes to initiate natural gas service to consumers situated in the communities of Toledo, Newport, Sheridan, Tillamook, Lincoln City and Willamina, Oregon, and their respective environs. To effectuate such service, Northwest proposes to construct and operate certain transmission facilities extending from its existing facilities interconnecting with Applicant's McMinnville and Amity Meter Station, together with distribution facilities necessary to provide service to the aforementioned communities.

To accommodate Northwest's requirements, Applicant proposes to modify the McMinnville and Amity Meter Station so as to increase the capacity thereof and to make delivery to Northwest at the outlet thereof. The proposed modification will consist of replacing the existing double 4-½-inch O.D. orifice-type meter run with a double 8-⅝-inch O.D. orifice-type meter run and necessary appurtenances, including dual regulation.

The estimated maximum daily and annual natural gas requirements of Northwest aggregate 18,283 Mcf and 4,009,124 Mcf, respectively, during the third full year of proposed service. The sale and delivery of this gas are proposed to be initiated in accordance with and at rates contained in Applicant's Rate Schedules DL-1 and I-1 FPC Gas Tariff, Original Volume No. 3.

Applicant states that if the facilities and service embraced by the instant application are approved, they will be divested by Applicant to Northwest Pipeline Corporation under the authorizations sought by Applicant in Docket No. CP66-27, if such authorizations issue subsequent to the grant of the instant application. Otherwise, Northwest Pipeline Corporation will be substituted for Applicant under the instant application.

The estimated cost of Applicant's proposed modification is $27,500, which will be financed from currently available working funds. Northwest's estimated cost of construction is $5,447,400, which will be financed from the sale of mortgage and debenture bonds, common and preferred stock, and cash generated from operations.

After due notice no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on December 22, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence including the application, supplement and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, El Paso Natural Gas Company, a Delaware corporation having its principal place of business in El Paso, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of October 29, 1942, in Docket Nos. G–242 and G–257 (3 FPC 851).

(2) The proposed construction and operation of facilities and sale of natural gas, as hereinbefore described, and as more fully described in the application and exhibits in this proceeding are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid proposed construction and operation of facilities and sale of natural gas are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon El Paso's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to the Applicant, El Paso Natural Gas Company, in this proceeding authorizing the construction and operation of facilities and sale of natural gas, all as more fully described in the application and exhibits herein, subject to the jurisdiction of the Commission, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities authorized to be constructed and operated by Applicant shall be completed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the aforesaid Regulations within six months of the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

EL PASO NATURAL GAS COMPANY AND EL PASO GAS TRANSPORTATION CORPORATION, DOCKET NO. CP66–105

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND PERMITTING AND APPROVING ABANDONMENT OF SERVICE

(Issued December 29, 1965)

On October 12, 1965, El Paso Natural Gas Company (Gas Company) and El Paso Gas Transportation Corporation (Transportation Corporation) filed in Docket No. CP66–105 a joint application pursuant to Sections 7(b) and

7(c) of the Natural Gas Act for, on the part of Gas Company, permission and approval to abandon the sale of natural gas to Southern Union Gas Company (Southern Union) and a certificate of public convenience and necessity authorizing the sale and delivery of natural gas to Del Norte Natural Gas Company (Del Norte), and for, on the part of Transportation Corporation, permission and approval to abandon the transportation of natural gas for Southern Union and for a certificate of public convenience and necessity authorizing the construction and operation of facilities and the transportation of natural gas for Del Norte, all as more fully set forth in the application.

Gas Company proposes to sell natural gas to Del Norte which Del Norte will export and sell to Juarez Gas Company (Juarez Gas) and Gas Natural de Juarez (Gas Natural) for resale and distribution in Ciudad Juarez, Chihuahua, Mexico, a community adjacent to El Paso, Texas. Del Norte will export and sell gas at four points on the international boundary between United States and Mexico. Del Norte proposes to succeed to Southern Union in the exportation of natural gas to Juarez Gas at two of the export points. Southern Union presently exports and sells gas at these points which is sold by Gas Company and transported by Transportation Corporation. Gas Company and Transportation Corporation herein seek permission and approval to abandon this sale and transportation. Del Norte will initiate exportation and sale at the other two points to Gas Natural.

Natural gas available to Del Norte from Gas Company is deliverable at a point situated in El Paso, Texas. Transportation Corporation seeks authorization to transport such gas for the account of Del Norte from the point at which it is deliverable by Gas Company to three points of delivery to Del Norte on Transportation Corporation's existing system in El Paso. At each of the points of delivery to Del Norte, Transportation Corporation proposes to construct and operate a standard orifice-type measuring and regulating station. The estimated cost of said facilities is $32,100 to be financed from working funds.

During the third full year of service, the estimated peak day and annual volumes to be exported and sold by Del Norte are 26,019 Mcf and 3,424,638 Mcf, respectively. Sales by Gas Company to Del Norte will be made pursuant to Rate Schedules A–3 and B–2 of Gas Company's Gas Tariff, Original Volume No. 1. Transportation service to be performed by Transportation Corporation will be pursuant to Rate Schedule T–1 of Transportation Corporation's Gas Tariff, First Revised Volume No. 1.

Concurrently herewith an order authorizing Del Norte to export natural gas will be issued in Docket No. CP66–104 and a permit will be released in Docket No. CP66–106 authorizing the operation and maintenance of facilities at the international boundary by Del Norte.

After due notice a petition to intervene was filed in Docket Nos. G–513, CP66–104, CP66–105 and CP66–106 by Juarez Gas Company. Said petition is denied in all dockets in the order issued in Docket No. CP66–104, *et al.*, *supra* p. 1584, concurrently herewith. No other petitions to intervene or notices of intervention have been received.

At a hearing held on December 22, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits thereto, submitted in support of the authorizations sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, El Paso Natural Gas Company, a Delaware corporation having its principal place of business in El Paso, Texas, is a "natural-gas com-

pany" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of January 11, 1944, in Docket No. G–288 (4 FPC 486).

(2) Applicant, El Paso Gas Transportation Corporation, a Delaware corporation having its principal place of business in El Paso, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of August 31, 1948, in Docket No. G–287 (7 FPC 886).

(3) The sale and transportation of natural gas hereinbefore described, as more fully described in the application in this proceeding, will be in interstate commerce subject to the jurisdiction of the Commission, and said transportation and sale and the construction and operation of facilities therefor are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(4) Applicants are able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(5) The construction and operation of facilities and the transportation and sale of natural gas hereinbefore described, as more fully described in the application herein, are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(6) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder should be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(7) The service proposed to be abandoned as hereinbefore described, all as more fully described in the application in this proceeding, is subject to the jurisdiction of the Commission, and the abandonment thereof is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(8) The abandonment hereinbefore described is permitted by the public convenience and necessity and should be approved as hereinafter ordered.

The Commission orders:

(A) A certificate of public convenience and necessity is issued authorizing Applicants to construct and operate facilities and to sell and transport natural gas as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The construction authorized in paragraph (A) above shall be completed and the transportation and sale of natural gas shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act within six months from the date of this order.

(D) Permission for and approval of the abandonment of the service hereinbefore described, all as more fully described in the application in this proceeding, are granted.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

EL PASO NATURAL GAS COMPANY, DOCKET NOS. CP66–127 AND CP66–128

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued December 29, 1965)

On October 25, 1965, El Paso Natural Gas Company (Applicant) filed, with respect to its Southern Division, in Docket No. CP66–127 and with respect to its Northwest Division, in Docket No. CP66–128, applications pursuant to Section 7(c) of the Natural Gas Act, as implemented by Section 157.7(b) of the Regulations under the Act, for certificates of public convenience and necessity authorizing the construction, during the calendar year 1966, and the operation of routine field facilities to enable Applicant to take into the certificated main pipeline systems of its respective divisions natural gas which will be purchased from producers thereof, all as more fully set forth in the applications in these proceedings.

The purpose of these "budget-type" applications is to augment Applicant's ability to act with reasonable dispatch in contracting for and connecting to the pipeline systems of its respective divisions new or expanded supplies of natural gas in various producing areas generally coextensive with said systems.

Applicant states that it has filed the subject separate applications for its Northwest Division and its Southern Division in consideration of the forthcoming divestiture of Applicant's Northwest Division facilities to Northwest Pipeline Corporation, as ordered by the United States Supreme Court.[1]

The total cost of the facilities covered by the application in Docket No. CP66–127 will not exceed a maximum of $4,000,000, with no single project to exceed a cost of $500,000. The total cost of the facilities covered by the application in Docket No. CP66–128 will not exceed a maximum of $1,000,000, with no single project to exceed a cost of $500,000. The costs in both dockets will be financed from working funds.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the applications has been filed.

At a hearing held on December 22, 1965, the Commission on its own motion received and made a part of the record in these proceedings all evidence, including the applications and exhibits, submitted in support of the authorizations sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, El Paso Natural Gas Company, a Delaware corporation having its principal place of business in El Paso, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of January 11, 1944, in Docket No. G–288 (4 FPC 486).

(2) The facilities hereinbefore described, as more fully described in the applications in these proceedings, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are sub-

[1] See Applicant's application in Docket No. CP66–27 and Northwest Pipeline Corporation's applications in Docket Nos. CP66–28, CP66–29 and CP66–30.

ject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit in each of the subject dockets within 60 days after the expiration of the authorizations granted hereinafter, a statement in compliance with Section 157.7(b)(3) of the Commission's Regulations under the Natural Gas Act.

(6) Public convenience and necessity require that the certificates hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(7) The authorizations hereinafter granted should be limited to construction during the calendar year 1966 and total expenditures for facilities to be constructed in Docket No. CP66–127 should be limited to $4,000,000, with no single project to exceed a cost of $500,000, and in Docket No. CP66–128 should be limited to $1,000,000, with no single project to exceed a cost of $500,000.

The Commission orders:

(A) Upon the terms and conditions of this order, certificates of public convenience and necessity are issued authorizing Applicant, El Paso Natural Gas Company, in Docket Nos. CP66–127 and CP66–128 to construct during the calendar year 1966 the proposed facilities hereinbefore described, as more fully described in the respective applications in these proceedings, and to operate such facilities only to take natural gas supplies from producers who have received authorization from the Commission to sell natural gas to said Applicant.

(B) Applicant shall submit in each of the subject dockets within 60 days after the expiration of the authorizations granted by paragraph (A) above a statement in compliance with Section 157.7(b)(3) of the Commission's Regulations under the Natural Gas Act.

(C) The certificates issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(D) The authorizations granted in paragraph (A) above are limited to construction during the calendar year 1966 and total expenditures for facilities to be constructed in Docket No. CP66–127 are limited to $4,000,000, with no single project to exceed a cost of $500,000, and in Docket No. CP66–128 are limited to $1,000,000, with no single project to exceed a cost of $500,000.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

IDAHO POWER COMPANY, DOCKET NO. E-7229

SUPPLEMENTAL ORDER PROVIDING FOR INVESTIGATION HEARING AND SUBMISSION OF SPECIAL REPORT

(Issued December 29, 1965)

This order directs a hearing on the lawfulness of Idaho Power Company's (Idaho Power), Rate Schedule FPC No. 30 as supplemented.

By order of June 11, 1965, we directed a hearing on the lawfulness of Idaho Power's Rate Schedule FPC No. 31 as supplemented and suspended the effectiveness of Supplement No. 1 thereto.[1] Under the two rate schedules, Company provides wholesale electric service to the Elko Division of Nevada Power Company (Nevada Power) (FPC No. 30) and the Wells Rural Electric Company (Wells) (FPC No. 31).

Idaho Power's service to the two customers is effected by means of Idaho's 138/69 kv substation located at Wells, Nevada. Service to the substation is provided over Idaho's 130 mile 138 kv line emanating from its King substation Hagerman, Idaho.[2]

Staff studies based on available office data indicate that Idaho Power's rates to Wells and Nevada Power (FPC Nos. 30 and 31, as supplemented) may result in excess rates or charges, may be unduly discriminatory, unduly preferential, or otherwise unjust, unreasonable, and unlawful within the meaning of the Federal Power Act.[3]

It therefore appears to be in the interest of all consumers served by Idaho Power or through that company, that Idaho be directed to submit a special report setting out cost and revenue data using 1965 as the test year showing Company's cost of service to Wells and Nevada Power.

The Commission further finds:

It is necessary and appropriate for the purposes of the Federal Power Act, particularly Sections 205, 206, 207, 208, 301, 304, 307, 308, and 309 thereof, that (1) this proceeding determine the lawfulness of Idaho Power's

---

[1] Idaho Power's Rate Schedule FPC No. 31 on file with this Commission since July 15, 1960, was proposed to be changed by Supplement No. 1 thereto, effective June 14, 1965.

[2] Idaho also serves a small retail load at Border, Idaho, from this line.

[3] The Commission's order of June 11, 1965, was directed primarily to the effect of changes in contract demand of Idaho Power's service to Wells. The order states in part:

The proposed rate schedule would amend an earlier agreement of March 17, 1960 (Idaho Power Company's Rate Schedule No. 31) by increasing the Wells' contract demand at the Company's Wells Nevada Substation from 6,250 to 8,400 kw. * * * Pursuant to Section 5.5 of Company's Rate Schedule No. 31, Wells paid Company $550,000 'connection charge' as its share of the cost of constructing the transmission line and substation. * * *

Supplement No. 1 to Company's Rate Schedule FPC No. 31 may have the effect of unduly restricting this Commission in carrying out its regulatory duties under the provisions of the Federal Power Act. Unless suspended by order of the Commission that supplement will become effective pursuant to the provisions of the Federal Power Act on June 14, 1965. If Company's Supplement No. 1 to Rate Schedule FPC No. 31 were not suspended Wells might lose any remaining recourse under the Federal Power Act for requesting a refund of $140,000 from Company in lieu of an increased capacity entitlement * * *

Rate Schedule FPC No. 30 as supplemented, as well as Rate Schedule FPC No. 31, as supplemented, and (2) Idaho Power be directed to submit a special report, all as hereinafter provided.

The Commission orders:

(A) A public hearing shall be held concerning the lawfulness of Idaho Power's rate schedules as referred to in the above findings, at the time and place and in the manner all to be fixed by notice of the Secretary.

(B) Idaho Power shall file, on or before March 15, 1966, a special report using 1965 as the test year, showing Company's cost of rendering service to Wells and Nevada Power calculated in accordance with applicable Commission precedents and submitted in the form prescribed in Statements A through O, Section 35.13(b)(4)(iv) [18 CFR § 35.13(b)(4)(iv)] of the Commission's Regulations under the Federal Power Act.

(C) The foregoing showing shall not preclude or limit any additional showing by Idaho Power or others and shall be without prejudice to future action taken by the Commission or its staff, or to any future position Company or others may wish to take as to the significance of, or conclusions to be drawn from, the above factual showing.

(D) The foregoing showing shall be submitted in writing with sufficient copies to provide this Commission with an original and nine copies, to provide each State Commission affected with six copies and to provide two copies for each other party which has been or may hereafter be granted intervention in this proceeding.

(E) During the course of this proceeding Idaho Power shall submit or make available to this Commission staff any cost, revenue, operating or other pertinent data as may be requested by the staff.

(F) In view of the enlarged scope of this proceeding effectuated by this order, notices of intervention or petitions to intervene in this proceeding may be filed with the Commission on or before January 28, 1966, in accordance with the Commission's Rules of Practice and Procedure (18 CFR 1.8 and 1.37).

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

NATURAL GAS PIPELINE COMPANY OF AMERICA, DOCKET NO. CP66-129

FINDINGS AND ORDER AFTER STATUTORY HEARING PERMITTING AND APPROVING ABANDONMENT OF FACILITIES

(Issued December 29, 1965)

On October 26, 1965, Natural Gas Pipeline Company of America (Applicant) filed in Docket No. CP66-129 an application pursuant to Section 7(b) of the Natural Gas Act for permission and approval to abandon pipeline and meter facilities in Duval County, Texas, all as more fully set forth in the application.

Applicant proposes to sell to Socony Mobil Oil Company, Inc. (Socony) approximately 13.2 miles of 10-inch pipeline, 1.5 miles of 8-inch pipeline and two meter stations used in the transportation of natural gas from the Lundell Field to Applicant's 20-inch Hagist Ranch lateral on its Gulf Coast line. The subject facilities are used by Applicant to transport gas purchased from Socony, Texaco Inc., Sinclair Oil & Gas Company, Humble Oil & Refining Company and Lundell Heirs. Said producers have exercised their contractual

right to process the gas before delivery to Applicant. The gas will be processed at the existing Hagist Ranch Gasoline Plant operated by Socony where Applicant is presently receiving gas from the Hagist Field at the tailgate of the plant. Applicant presently transports gas through facilities proposed to be abandoned to a point close to and downstream from the Hagist Gasoline Plant. Socony will use the facilities to transport gas to the plant and they will become a part of Socony's gathering system.

The subject facilities, which were constructed pursuant to "budget-type" authorization in Docket No. CP63–75, will be sold at their depreciated book value of $301,880.

After due notice no petition to intervene, notice of intervention or protest to the granting of the application has been received.

At a hearing held on December 22, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits thereto, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Natural Gas Pipeline Company of America, a Delaware corporation having its principal place of business in Chicago, Illinois, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of October 13, 1942, in Docket No. G–235 (3 FPC 830).

(2) The facilities proposed to be abandoned, as hereinbefore described and as more fully described in the application, are used in the transportation of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the abandonment thereof is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(3) The proposed abandonment is permitted by the public convenience and necessity and should be approved as hereinafter ordered.

The Commission orders:

(A) Permission for and approval of the abandonment of facilities, as hereinbefore described and as more fully described in the application, are granted.

(B) Applicant shall advise the Commission of the date of the abandonment authorized in paragraph (A) above within ten days thereof.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

TEXAS EASTERN TRANSMISSION CORPORATION, DOCKET NO. CP66–62

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued December 29, 1965)

On August 24, 1965, Texas Eastern Transmission Corporation (Applicant) filed in Docket No. CP66–62 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the sale and delivery of an additional 510 Mcf of natural gas to Huntingdon Gas Company (Huntingdon) and the sale and delivery of a Maximum

Daily Quantity of 306 Mcf of natural gas to Shamokin Gas Company (Shamokin), a proposed new customer, all as more fully described in the application.

Both Shamokin and Huntingdon are subsidiary companies of Penn Fuel Gas, Inc. (Penn Fuel), an existing customer of Applicant. Gas will be be delivered to Huntingdon at a point in Huntingdon County, Pennsylvania, and deliveries of gas to Shamokin will be made at a delivery point in Berks County, Pennsylvania.

Shamokin will receive its gas from Applicant through a single lateral which is jointly owned by four subsidiary companies of Penn Fuel. Shamokin proposes to lease a portion of the lateral after the grant of the certificate hereinafter issued to Applicant. Authorization by the Pennsylvania Public Utility Commission is required for the leasing arrangement.

Both the increased volumes to Huntingdon and the new sale to Shamokin will be made under Applicant's Rate Schedules GS–D and I–D. No additional facilities will be required for the proposed sales. The proposal is economically feasible.

Due notice of the filing of the application was published in the Federal Register on September 9, 1965 (30 F.R. 11570). No protest, petition to intervene or notice of intervention has been filed in this proceeding.

At a hearing held on December 22, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorizations sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Texas Eastern Transmission Corporation, a Delaware corporation having its principal place of business in Shreveport, Louisiana, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order issued March 30, 1949, in Docket No. G–1089 (8 FPC 228).

(2) The proposed sales of natural gas hereinbefore described, as more fully described in the application in this proceeding, will be sales for resale in interstate commerce subject to the jurisdiction of the Commission and are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The sales of natural gas, as proposed in the application, are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b) (c)(3) and (e) of Section 157.20 of said Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to Applicant, Texas Eastern Transmission Corporation, authorizing the sale and delivery of increased quantities of natural gas to Huntingdon and the initial sale and delivery of natural gas to Shamokin, as hereinbefore described and as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3) and (e) of Section 157.20 of such Regulations.

(C) The sale of increased volumes of natural gas and the initial sale of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within six months from the date of this order.

(D) The certificate issued by paragraph (A) above, insofar as it authorizes the initial sale to Shamokin, is conditioned upon Shamokin's receipt of authorization from the Pennsylvania Public Utility Commission for its proposed lateral pipeline leasing arrangement, as hereinbefore described.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

UNITED GAS PIPE LINE COMPANY, DOCKET NO. CP66-78

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued December 29, 1965)

On September 17, 1965, United Gas Pipe Line Company (Applicant) filed in Docket No. CP66-78 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of new and larger facilities and the increased delivery of natural gas to Thiokol Chemical Corporation (Thiokol), Moss Point, Mississippi, all as more fully set forth in the application.

Applicant proposes to deliver an additional 900 Mcf of natural gas per day to Thiokol for use in Thiokol's synthetic rubber plant. Estimated annual and peak day deliveries, including the increased volume, are 264,000 Mcf and 1,500 Mcf of gas, respectively. The present facilities and delivery have not been specifically authorized.

Applicant proposes to construct and operate metering and regulating facilities to replace present facilities in order to accommodate the larger volume of gas proposed to be delivered. Estimated net cost of the proposed facilities is $3,453, to be financed from current working funds.

Although not requested in the subject application, it appears appropriate to include in the certificate hereinafter issued authorization to transport and deliver the total volumes of gas to Thiokol.

After due notice no petition to intervene, notice of intervention or protest to the granting of the application has been received.

At a hearing held on December 22, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits thereto, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, United Gas Pipe Line Company, a Delaware corporation having its principal place of business in Shreveport, Louisiana, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of November 10, 1942, in Docket No. G-232 (3 FPC 863).

(2) The construction and operation of the proposed facilities, as hereinbefore described and as more fully described in the application, will be used in the transportation of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the construction and operation thereof and the transportation of natural gas are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of facilities and the transportation of natural gas, as hereinbefore described and as more fully described in the application, are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder should be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to Applicant authorizing the construction and operation of facilities and the transportation of natural gas, as hereinbefore described and as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued in paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities authorized shall be completed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Regulations under the Natural Gas Act, within three months from the date on which this order issues.

(D) This certificate shall not entitle Thiokol Chemical Corporation to whom firm deliveries are authorized herein to any priorities or rights to additional gas for meeting any future increases in its requirements at the expense of firm resale customers desiring to acquire additional gas to meet any future increases in their requirements.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

WESTERN INDIANA PUBLIC SERVICE COMPANY, INC. AND PANHANDLE EASTERN PIPE LINE COMPANY, DOCKET NO. CP65-380

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued December 29, 1965)

On May 28, 1965, Western Indiana Public Service Company, Inc. (Applicant), filed in Docket No. CP65-380 an application together with sup-

plemental information on July 12, and September 8, 1965, pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Panhandle Eastern Pipe Line Company (Panhandle) to establish physical connection of its natural gas transmission facilities with the facilities proposed to be constructed by Applicant, and to sell and deliver natural gas to Applicant for resale and distribution in a service area which includes Bloomingdale, Marshall, Kingman, Veedersburg, Hillsboro, Covington and Waynetown, Indiana, all as more fully set forth in the application.

Applicant proposes to construct and operate distribution facilities to serve the seven communities, including the adjacent areas, and to construct and operate approximately 44.7 miles of lateral transmission lines extending from the proposed point of interconnection with Panhandle's main transmission line north of Rockville, Parke County, Indiana, to the city gate of each community proposed to be served. Applicant seeks the connection and the sale and delivery by Panhandle to Applicant of up to 5269 Mcf of natural gas per day for resale in the proposed service area.

The total estimated volumes of natural gas involved to meet Applicant's annual and peak day requirements for the initial three year period of proposed operations are estimated to be:

	First year	Second year	Third year
Annual (Mcf)	276,364	424,198	510,435
Peak day (Mcf)	2,992	4,300	5,269

The total estimated cost of Applicant's proposed distribution system and lateral is $1,750,000, which is to be financed from the sale of first mortgage bonds and common stock. Based on data in the application, as supplemented, Applicant's proposals appear to be economically feasible.

Applicant has obtained 25 year franchises from each of the seven communities it proposes to serve, and has pending before the Public Service Commission of Indiana an application for a state certificate of public convenience and necessity.

Due notice of the filing of the subject application and opportunity for hearing thereon have been given by publication in the Federal Register on July 11, 1965 (30 F.R. 7627).

On July 30, 1965, Respondent filed its reply to the application as part of its petition for leave to intervene, requesting in connection therewith that the matter be submitted to the procedures of an evidentiary hearing. Upon the filing of an amendment to the application by the Applicant, Respondent filed on September 29, 1965, a notice of withdrawal of its said petition to intervene stating it had no objection to the proposal of Applicant as amended.

On October 20, 1965, Indiana Gas & Water Co., Inc., withdrew its petition to intervene filed on June 30, 1965.

No other protest, petition to intervene, or notice of intervention or request for hearing has been filed in this proceeding.

The Commission finds:

(1) Panhandle Eastern Pipe Line Company, a Delaware corporation having its principal place of business in Kansas City, Missouri, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of October 17, 1945, in Docket No. G–254 (4 FPC 1081).

(2) Applicant, Western Indiana Public Service Company, Inc., an Indiana corporation having its principal place of business in Rockville, Indiana, is a corporation legally authorized to engage in the local distribution of natural gas to the public.

(3) It is necessary and desirable in the public interest to direct Respondent to establish physical connection of its transmission facilities with the facilities proposed to be constructed and operated by Applicant, and to sell and deliver to Applicant under a service agreement to be executed by Applicant with Respondent in accordance with the Commission's Regulations, up to 5269 Mcf per day of natural gas for distribution and resale as hereinbefore described.

(4) The requirement that Respondent serve Applicant, as hereinafter ordered, will not impair Respondent's ability to render adequate service to its existing customers.

(5) Applicant should be prepared to receive natural gas from Respondent for distribution in the area and to the communities hereinbefore described within one year from the date of the issuance of this order.

The Commission orders:

(A) Panhandle Eastern Pipe Line Company is directed to establish physical connection of its facilities with the facilities proposed to be constructed and operated by Applicant, as herein described, and to sell and deliver up to 5269 Mcf of natural gas daily to Applicant under a service agreement to be executed by Applicant with Respondent in accordance with the Commission's Regulations. Such service shall be rendered pursuant to Panhandle Eastern's presently filed appropriate rate schedule.

(B) Respondent shall report to the Commission in writing the date of commencement of service to Applicant within 15 days after such service begins.

(C) Applicant shall obtain certificate authorization from the Public Service Commission of Indiana and be prepared to receive service as directed herein within one year from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

ALABAMA POWER COMPANY, PROJECT NO. 2146

ORDER APPROVING PLAN FOR CLEARING OF PROJECT RESERVOIR AREAS

(Issued December 30, 1965)

On September 13, 1965, Alabama Power Company (Licensee) filed an application for Commission approval of plans for the clearing of areas within the Lock 3 Reservoir, the Lay Reservoir, and the Jordan No. 2 Reservoir of Project No. 2146. The application was filed in compliance with Article 32 of the license for the project, as modified by Commission order issued July 22, 1965, 34 FPC 105.

The Licensee's application contains plans for the selective clearing of the Lock 3 and Lay Reservoirs. However, with regard to the Jordan No. 2 Reservoir, Licensee proposes complete clearing rather than selective clearing on the ground that selective clearing of Jordan No. 2 is not practicable. Upon consideration of the facts, we agree with the Licensee that complete rather than selective clearing is reasonable in the Jordan No. 2 Reservoir. The Reservoir at the Jordan No. 2 development is a small forebay averaging about two miles in length and 0.6 mile in width, with a total area of perhaps 1.2 square miles.

Because this is a relatively small area, and because high velocity flows may be expected through the reservoir, it appears that the entire reservoir area should be cleared.

Article 32 requires the plans for reservoir clearing to be developed in cooperation with the Alabama State Department of Conservation, the Alabama State Department of Public Health, and the United States Fish and Wildlife Service. Enclosed with the application for approval, the Licensee submitted copies of letters from each of these agencies in which their complete approval of Licensee's clearing plans is indicated. Licensee also enclosed a letter dated September 1, 1965, from the District Engineer, U.S. Army Engineer District, Mobile, Alabama, which states the Corps of Engineers' approval of the Licensee's clearing plans, subject however, to the clearing of specified additional areas. The application declares that the additional clearing suggested by the Corps has been incorporated into the clearing plan.

The specifics of the proposed plan are set out in full in 36 drawings submitted with the application, including those drawings described and designated as follows:

17 drawings entitled "Lock 3 Reservoir Clearing Maps", and designated as: Lock 3; D–144247, sheets 17–20, 24–29, 32, 33, 33A, 34, 34A, 35, and 37; and

17 drawings entitled "Lay Dam Reservoir Clearing Maps", and designated as: Lay; D–144409, sheets 54, 55, 57–60, 62–72.

The Commission finds:

It is consistent with the public interest to approve the aforesaid plans providing for:

(a) selective clearing of the Lock 3 Reservoir and the Lay Reservoir, as shown on the above-designated drawings, and incorporating the modifications requested by the Corps of Engineers' September 1, 1965 letter, and (b) complete clearing of all lands within the Jordan No. 2 Reservoir area.

The Commission orders:

The plans specified in the above finding are approved, subject to such further modifications in the interests of navigation, recreation, fish and wildlife resources, public health and safety, or the operation of the project, as may be found necessary or desirable by the Commission after notice and opportunity for hearing.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

BROWN-NEW HAMPSHIRE, INC., PROJECT NOS. 2300, 2311, 2326 AND 2327

ORDER MODIFYING LICENSES (MAJOR)

(Issued December 30, 1965)

Pursuant to our staff's letter-suggestion dated October 26, 1965, Brown-New Hampshire, Inc., licensee for major Project Nos. 2300, 2311, 2326 and 2327, requested on November 2, 1965, that its licenses for the above-designated projects be modified so that the recreational requirements at the projects be consistent and in conformity with the recreation license requirement set forth in its licenses for Project Nos. 2422 and 2423, respectively.

All six projects are located on the Androscoggin River in or near Berlin, New Hampshire where the river is heavily polluted with industrial and sewage wastes and offers little or no present recreational opportunities. A report

dated July 15, 1963 on the Androscoggin River Basin,[1] gives special emphasis to fish and wildlife resources, the pollution problems, existing storage and water power developments, and the effects of these developments on the fish and wildlife resources and stream pollution. Upon abatement of pollution and probable rehabilitation of Atlantic salmon runs in the Androscoggin Basin, the forebays of all six projects could be developed into important recreational areas.

The Commission finds:

In the circumstances, it is in the public interest to modify the licenses for project Nos. 2300, 2311, 2326 and 2327 to provide therein consistent requirements for recreation, in conformity with the license requirements set forth in the licenses for Project Nos. 2422 and 2423.

The Commission orders:

(A) The license for Project No. 2300 is hereby modified to include therein the following additional Article 25:

Article 25. Licensee shall cooperate with State and local agencies in the development and maintenance of access areas and roads and such other facilities necessary for full recreational utilization by the public or project lands and waters, consistent with the terms of the license and the operation of the project. At the end of three (3) years from the date of issuance of this order and every fifth year, thereafter, licensee shall advise the Commission of the results of cooperation with State and local agencies and of further recreation development at the project.

(B) The license for Project No. 2311 is hereby modified to include therein the article set forth in paragraph (A) above, but redesignated as Article 30 in lieu of Article 30 presently included in the license for that project.

(C) The licenses for Project Nos. 2326 and 2327 are hereby modified to include therein the article set forth in paragraph (A) above, but redesignated as Article 31, respectively, in lieu of the Article 31 presently included in the licenses for the projects.

(D) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this order. In acknowledgement of the acceptance of this order, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

THE LINCOLN NATIONAL LIFE INSURANCE COMPANY (LICENSEE) AND ARIZONA PUBLIC SERVICE COMPANY (LESSEE), PROJECT NO. 2069

ORDER APPROVING REVISED PROJECT EXHIBIT M

(Issued December 30, 1965)

On July 16, 1965, Arizona Public Service Company, lessee and operator of Project No. 2069, filed for Commission approval a revised Exhibit M show-

[1] Prepared jointly by this Commission and the Departments of the Interior and Health, Education, and Welfare at the request of the Chairman, National Resources and Power Sub-committee, Committee on Government Operations, House of Representatives.

ing certain changes in the Childs Plant and the Irving Plant comprising the project. Project No. 2069 is located on Fossil Creek, a tributary of Verde River in Yavapai and Gila Counties, Arizona, and affects lands of the United States within the Coconino and Tonto National Forests.

The revised exhibit shows the replacement of manual control equipment with automatic control equipment at the Childs and Irving plants for operation of the plants from Phoenix, Arizona, and the relocation of the transformer bank at the Childs plant.

The Commission finds:

Revised Exhibit M, June 14, 1965, in four typewritten pages entitled "Specifications of Electrical and Mechanical Machinery and Transformers", conforms to the Commission's rules and regulations and should be approved as part of the license for the project, and Exhibit M, signed December 1, 1950, now part of the license and which has been superseded, should be eliminated from the license for the project.

The Commission orders:

The revised Exhibit M described in the above finding is hereby approved as part of the license for Project No. 2068, and the exhibit referred to in the same finding as being superseded is hereby eliminated from the license for the project.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr. and Charles R. Ross.

NIAGARA MOHAWK POWER CORPORATION, DOCKET NO. E–7241

ORDER AUTHORIZING MERGER OF FACILITIES

(Issued December 30, 1965)

Niagara Mohawk Power Corporation (Niagara Mohawk), filed an application with the Federal Power Commission on August 20, 1965, seeking authority pursuant to Section 203 of the Federal Power Act to merge its facilities with the facilities of Paul Smith's Electric Light & Power & Railroad Company (Paul Smith) pursuant to a merger agreement dated July 8, 1965.

Niagara Mohawk is incorporated under the laws of the State of New York and operates wholly within that state. It is engaged in the generation, purchase, sale at wholesale, transmission and distribution of electric energy in 42 counties in upstate New York.

Paul Smith operates a small electric utility system and generates, purchases, sells at wholesale, transmits and distributes electric energy in four counties in upstate New York. Paul Smith's College of Arts and Sciences is the beneficial owner of all common stock of Paul Smith. The facilities of Paul Smith are represented to have a depreciated original cost of $3,882,470 and these facilities are presently serving approximately 4,930 customers.

Although the service area of Paul Smith is contiguous to that of Niagara Mohawk, there is now no direct interconnection between the two systems. Presently, they are interconnected through the facilities of New York State Electric and Gas Corporaton. Applicant proposes to construct a 115 kv H–frame transmission line about 30 miles in length to interconnect its existing system to Paul Smith.

According to the application, Applicant proposes to make its scheduled rates and charges for residential, commercial and industrial service available to

retail customers of Paul Smith. Applicant states that such rates are substantially less than present rates charged by Paul Smith. Applicant does not propose any immediate change in the present wholesale rates of Paul Smith to two municipal systems, Lake Placid, New York and Tupper Lake, New York, but states it intends to review them. Paul Smith's wholesale electric rates to these municipalities exceed the rate level of Niagara Mohawk's wholesale electric rates in its eastern division (the geographic area of Lake Placid and Tupper Lake) as well as the wholesale rates of Niagara Mohawk applicable in its western division. To facilitate an assessment of the effects of the merger and interrelation of the disparate wholesale rates and charges which Niagara Mohawk proposes to continue, we shall direct Niagara Mohawk, unless it otherwise eliminates the differential in rates prior to that date, to submit by April 1, 1966, cost of service data showing Niagara Mohawk's cost of serving all of its comparable wholesale customers including Lake Placid and Tupper Lake, New York, plus any justification it may have for charging higher rates to the latter two customers.

In consummating the proposed merger, two steps are contemplated. Initially, Niagara Mohawk would issue 41,750 shares of common stock with an $8.00 par value in exchange for all of Paul Smith's outstanding common stock consisting of 12,500 shares with a $100 par value. Thereafter, Paul Smith's stock would be cancelled and that company merged into Niagara Mohawk according to the laws of the State of New York. For book purposes, Niagara Mohawk would acquire and record Paul Smith's utility plant, other assets, and other debits and would assume and record all of Paul Smith's liabilities, other credits and reserves including accumulated provision for depreciation.

Niagara Mohawk's common stock had a market price of $27¼ a share on the date of the merger agreement. According to the application, the common stock of Paul Smith is not listed on a market exchange and within recent years there have been practically no sales of this stock. On the basis of its market price on the date of the merger agreement, the 41,750 shares to be issued by Niagara Mohawk would have a total market price of about $1,137,700. This amount is $737,096 less than Paul Smith's net assets of $1,874,796 which are to be merged with Niagara Mohawk. These amounts are subject to adjustments as of the closing date of the merger.

As set forth in the aplication, Niagara Mohawk proposes to record the facilities to be acquired from Paul Smith at the stated original cost thereof, according to the records of the latter company. Accumulated provision for depreciation applicable to the properties of Paul Smith similarly would be transferred to accumulated provision for depreciation.

In recording the proposed merger transaction, Niagara Mohawk proposes the following accounting entries respecting proprietary capital: a credit to Niagara Mohawk's Account 201 Common Stock Issued in the amount of $334,000 (41,750 shares of Niagara Mohawk's common stock at stated par value thereof of $8 per share); a credit to Account 207 Premium on Capital Stock in the amount of $916,000 (the difference between the total par value of Paul Smith's common stock and the par value of Niagara Mohawk's common stock to be exchanged therefor); and a credit to Account 216 Unappropriated Earned Surplus in the amount of $624,796 stated to be the amount of earned surplus as recorded on the books of Paul Smith as of May 31, 1965.

We concur in the proposed credit to Account 201. However, under the requirements of our Uniform System of Accounts, Account 207 should only be credited with the difference between the $334,000 which represents the par value of the 41,750 shares of Niagara Mohawk stock being issued and the

aggregate market value of the said shares of stock based upn the closing market price per share as of the date of the consummation of the merger. Further, we believe that the use of Account 216, Unappropriated Earned Surplus to record the amount of earned surplus on Paul Smith's book is inappropriate because the merger should not affect the earned surplus of Niagara Mohawk. We believe that the difference between the net book value of Paul Smith's common stock and the market value of the Niagara Mohawk stock given represents a contribution to the capital accounts of Niagara Mohawk and should be treated as such. Therefore, the Commission prescribes the following accounting entries with regard to proprietary capital:

Account 201, Common Stock Issued, shall be credited with $334,000 (41,750 shares at $8 par value).

Account 207, Premium on Capital Stock, shall be credited with the difference between $334,000 (41,750 shares at $8 par value) and the aggregate market value of the 41,750 shares of common stock based upon the closing market price per share as of the date of consummation of the merger.

Account 211, Miscellaneous Paid-In Capital, shall be credited with an amount by which the net book value of Paul Smith's common stock, as of the date of the consummation of the merger, exceeds the closing market value on that same date, of the 41,750 shares of Niagara Mohawk's common stock.

While no adjustments to the accounting entries of Niagara Mohawk recording the assets and liabilities of Paul Smith as set forth in the application are necessary, we believe Niagara Mohawk should record the properties and plant records of Paul Smith so that they can be separately indentified for a two-year period. During that time, the Commission proposes to initiate a review of adequacies of the accumulated provision for depreciation applicable to the property of Paul Smith with any adjustments therein to be made by transfers from Account 211, Miscellaneous Paid-In Capital, to the extent available and thereafter by transfer from Account 207, Premium on Capital Stock.

Niagara Mohawk represents that the proposed transaction is in the public interest because, among others things, it will make available better and more adequate facilities for construction, extension, maintenance, and operation of Paul Smith's present distribution system and the merger will ultimately result in a single transmission and distribution system in Paul Smith's present territory and provide more adequate means for obtaining the required capital for the necessary future expansion and development of the present system.

Written notice of the application has been given to the New York Public Service Commission and to the Governor of that State. Notice was also published in the Federal Register on September 2, 1965, (30 F.R. 11294), stating that any person desiring to be heard or to make any protest with reference to said application should on or before September 20, 1965, file with the Federal Power Commission, Washington, D.C. 20426, petitions or protests in accordance with the requirements of the Commission's Rules of Practice and Procedure (18 CFR 1.8 or 1.10). No protest or petition or request to be heard in opposition to the granting of the application has been received.

The Commission finds:

(1) Niagara Mohawk, a corporation, is a public utility within the meaning of Section 203 of the Federal Power Act subject to the jurisdiction of the Commission as heretofore described and set forth in the Commission's order issued May 25, 1961, *Niagara Mohawk Power Corporation*, Docket No. E-6990 (25 FPC 1025).

(2) By the proposed transaction, Niagara Mohawk will merge or consolidate its facilities subject to the jurisdiction of the Commission with those of Paul Smith another person within the meaning and subject to the requirements of Section 203 of the Federal Power Act.

(3) The proposed merger of the facilities of Paul Smith with those of Niagara Mohawk, as described above, and subject to the provisions of this order will be consistent with the public interest as expressed in Section 203 of the Federal Power Act.

(4) It is necessary and appropriate for purposes of the Federal Power Act, particularly Sections 203, 205, 206, 304 and 309 thereof, that Niagara Mohawk be directed to submit cost of service and other data as hereafter provided.

The Commission orders:

(A) The proposed merger of the facilities of Paul Smith with those of Niagara Mohawk, all as described above, is authorized and approved upon the terms and conditions and for the purposes set forth in the application subject to the provisions of this order.

(B) Niagara Mohawk shall record the proposed transaction herein authorized and the facilities and properties referred to above as provided in the Commission's Uniform System of Accounts prescribed for public utilities and licensees and subject to the specific accounting entries as prescribed above with respect to Accounts 201, 207 and 211.

(C) Niagara Mohawk shall record the properties and plant records of Paul Smith so that they can be separately identified until December 31, 1967.

(D) Niagara Mohawk shall after the consummation of the merger and on or before April 1, 1966, submit a special report setting out cost and revenue data using 1965 as the test year, showing Niagara Mohawk's costs of rendering service to each of the following wholesale customers calculated in accordance with applicable Commission precedents and submitted in the form as prescribed in Statements A through O, Section 35.13(b)(4)(IV) of the Commission's Regulations under the Federal Power Act: Village of Holley, N.Y.; Village of Brocton, N.Y.; Ellicottville Elec. Lt. Co.; City of Jamestown, N.Y.; Rochester G&E; Green Island Ltg. Comm., Canton Electric Lt. & Pwr. Co.; Village of Richmondville, N.Y.; Adams Electric Lt. Co.; Village of Solvay; and Village of Westfield. Estimated cost and revenue data covering service to Lake Placid and Tupper Lake should also be submitted in the same form. An original and nine conformed copies of the report shall be submitted. Additionally, Niagara Mohawk shall submit such additional cost, revenue and other data as may be requested by Commission's staff.

(E) This authorization shall expire unless the transaction herein authorized and approved is consummated within 90 days of the date of issuance of this order.

(F) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuation, extensions or determinations of cost, or any matter whatsoever now pending or which may come before this Commission or any other regulatory body and nothing herein shall be construed as an acquiescence by this Commission in any estimate or determination of cost or any valuation of property claimed or asserted.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

BUDGET-TYPE CERTIFICATE APPLICATIONS, DOCKET NO. R-296

ORDER NO. 316

STATING GENERAL POLICY

(Issued December 30, 1965)*

By Order No. 185 issued February 8, 1956, 15 FPC 793; 21 F.R. 1485, the Commission prescribed amendments to its Regulations under the Natural Gas Act relating to the filing of rate schedules and tariffs under Part 154 and applications for certificates of public convenience and necessity under Part 157 of said Regulations (18 CFR 154.1, *et seq.*, and 157.5, *et seq.*).

By Order No. 247 issued June 7, 1962, 27 FPC 1119; 27 F.R. 5606, as amended by Order No. 281 issued April 21, 1964, 31 FPC 971; 29 F.R. 5544, the Commission prescribed Section 2.58 (18 CFR 2.58) announcing its policy on budget-type certificate applications under Section 7 of the Natural Gas Act.

The recitals in Order No. 185 respecting our policy on budget-type certificate applications should be included in Section 2.58 (18 CFR 2.58) of our Rules. By this order we are prescribing the pertinent part of such recitals as part of our policy and interpretations.

The Commission finds:

(1) The amendments herein prescribed are for purposes of codification of pronouncements heretofore made.

(2) The amendments are of a clarifying nature and represent matters of policy and procedure which do not require notice or hearing under Section 4(a) of the Administrative Procedure Act.

The Commission, acting pursuant to the provisions of the Natural Gas Act, as amended, particularly Sections 7 and 16 thereof (52 Stat. 824, 830; 56 Stat. 83; 15 U.S.C. 717f, 717o), *orders*, Part 2, Subchapter I of Title 18 of the Code of Federal Regulations is amended as follows:

(A) Delete from the first paragraph of § 2.58 the folowing:

> In accordance with the Commission's advice in Order No. 185, issued February 8, 1956 (15 FPC 793 at 794) * * *

and insert in lieu thereof the following:

> In accordance with the Commission's advice set forth in paragraph (e) of this section * * *

(B) Insert to follow paragraph (d) of § 2.58 the following new paragraph (e):

> (e) In its Order No. 185, issued February 8, 1956, 15 FPC 793, 794; 21 FR 1485, the Commission advised any interested natural-gas company subject to the Natural Gas Act that it may file under § 157.6 of the Rules a single certificate application covering in general outline along the lines of a budget estimate the proposed routine construction intended to be undertaken by it during the current or ensuing fiscal year. A hearing could then be held on such a proposal and a certificate issued in accordance with the general application. At the end of the period, a statement shall be filed showing the actions taken under the certificate and any authority thereunder which was not exercised.

*Published in the Federal Register on January 7, 1966 (31 F.R. 215).

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr. and Charles R. Ross.

SIGNAL OIL & GAS COMPANY (OPERATOR), DOCKET NOS. R161-438 AND RI64-659

ORDER ACCEPTING OFFER OF SETTLEMENT, REQUIRING FILING OF CONTRACT AMENDMENT, PROVIDING FOR REFUNDS, AND TERMINATING PROCEEDINGS

(Issued December 30, 1965)

On November 26, 1965, Signal Oil & Gas Company (Operator), hereinafter referred to as Signal, submitted pursuant to Section 1.18(e) of the Commission's Rules of Practice and Procedure an offer of settlement of the above-entitled rate suspension proceedings. The subject proceedings relate to the sale of residue gas to Cities Service Gas Company (Cities Service) at the tailgate of Signal's Fox Gasoline Plant in Carter County, Oklahoma, under Signal's FPC Gas Rate Schedule No. 1. The proceedings involve increased rates, collected subject to refund, from 11.0¢ per Mcf to 16.8¢ per Mcf effective September 20, 1961, in Docket No. RI61-438 and to 17.9¢ per Mcf effective November 1, 1964 in Docket No. RI64-659.

Under the terms of the offer, Signal proposes (1) a settlement rate of 14.0¢ per Mcf of gas at 14.65 psia; (2) to amend its contract with Cities Service to delete therefrom both the favored-nation and periodic price redetermination provisions and substitute therefor fixed periodic escalations of 1¢ per Mcf on July 1, 1968, and each five years thereafter during the term of the contract; (3) a moratorium on future increased rate filings until July 1, 1968, except for tax reimbursement filings permitted by its contract; and (4) to refund all monies collected subject to refund above the settlement rate from May 23, 1962, through October 22, 1965, plus applicable interest.[1]

Signal also reserves the right to file rate increases or rate decreases to conform with the just and reasonable rate determination found by the Commission as a result of an applicable area rate proceeding.

Signal states in its offer, among other things, that although it has consented to the May 23, 1962 refund commencement date at the insistence of the staff, such date being eight months after the effective date of its increased rate, its position is that the refund commencement date should be moved up to September 23, 1962, which would be approximately one year after the effective date of Signal's increased rate. Signal contends that this action would afford Signal the same treatment as the Commission gave to the owners of the Garvin County plants in approving their settlement offer in *Warren Petroleum Corporation (Operator), et al.*, Docket No. G-20478, *et al.*, order issued June 3, 1965, 33 FPC 1212.[2] We believe that the May 23, 1962 refund commencement date is more appropriate as it takes into consideration the fact that here no additional acreage is to be dedicated while in the Garvin County Plants settlement additional acreage was to be dedicated under contract as a result of the settlement.

---

[1] The refund, exclusive of interest, is estimated at approximately $1,623,000 through October 22, 1965. Cities Service is required to flow-through the refunded amounts in accordance with the Commission's orders issued in Docket Nos. RP62-1 and RP64-9.

[2] Signal also points out that the Commission, in *National Fuels Corporation* and *Warren Petroleum Corporation*, Docket No. G-20426, order issued May 24, 1965, 33 FPC 1048, permitted the owners of the Madill Plant to commence making refunds fourteen months after the effective date of their increased rate.

The proposed 14.0¢ settlement rate is the same rate approved by us for sales from the Garvin County Plants and the Madill Plant. No protests have been filed to the proposed settlement and the interveners have expressed their concurrence.

We desire to make it clear that acceptance of Signal's offer of settlement shall not be construed as approval of any future increased rate filed in accordance with its reservation of the right to file increases to cover future tax increases, and is without prejudice to any findings or order of the Commission in any future proceedings, including area rate or other similar proceedings, involving Signal's rate and rate schedule.

The Commission finds:

The proposed settlement of the above-designated proceedings, on the basis described herein, as more fully set forth in the offer of settlement filed with the Commission by Signal on November 26, 1965, is in the public interest and appropriate to carry out the provisions of the Natural Gas Act and should be approved and made effective as hereinafter ordered.

The Commission orders:

(A) The offer of settlement filed with the Commission by Signal on November 26, 1965, is hereby approved in accordance with the provisions of this order.

(B) Signal shall file, within 30 days from the date of issuance of this order, a notice of change in rate providing for the 14.0¢ per Mcf settlement rate approved herein, and an executed contractual amendment to its FPC Gas Rate Schedule No. 1, eliminating the favored-nation and the price redetermination provisions therefrom and substituting therefor periodic escalations as specified in its offer of settlement. Both contractual amendment and the notice of Change shall be submitted in accordance with Part 154 of the Commission's Regulations under the Natural Gas Act.

(C) Signal shall compute for the respective periods in which it has refund obligations in the above-entitled proceedings the difference between the rate collected subject to refund and the settlement rate for the period from May 23, 1962, to the date of this order for the subject sales of natural gas to Cities Service, with applicable interest to the date of this order, and within 30 days from the date of this order it shall submit a report to the Commission, and serve a copy on Cities Service, setting out the amount of refunds, plus applicable interest, it has computed it is obligated to make (showing separately the principal and interest), the bases used for such determination and the period covered.

(D) Signal shall within 60 days from the date of issuance of this order, refund with applicable interest to the date of issuance of this order to Cities Service the monies it has computed in accordance with paragraph (C) above, and shall within 10 days thereafter file with the Commission a release from Cities Service showing receipt of the refunds in conformity with the settlement proposal as approved herein.

(E) Upon notification by the Secretary of the Commission that Signal has complied with the terms and conditions of the order, the rate and charge of 14.0¢ per Mcf at 14.65 psia, specified in Signal's offer of settlement, shall be effective as of the date of issuance of this order, and Docket Nos. RI61–438 and RI64–659 shall be deemed terminated.

(F) The acceptance by the Commission of Signal's offer of settlement, is without prejudice to any findings or determinations that may be made in any proceeding now pending, or hereafter instituted by or against Signal including area rate or other similar proceedings.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

SOUTHERN NATURAL GAS COMPANY, DOCKET NO. CP66-116

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued December 30, 1965)

On October 20, 1965, Southern Natural Gas Company (Applicant) filed in Docket No. CP66-116 an application, as supplemented on November 26, 1965, pursuant to Section 7(c) of the Natural Gas Act, as implemented by Section 157.7(c) of the Regulations under the Act, for a certificate of public convenience and necessity authorizing the construction, during the 12 months' period commencing on the date this order issues, and the operation of natural gas facilities for the sale of natural gas to direct customers located in areas outside the franchise area of any local distributor and to existing distributors for resale in existing market areas and for miscellaneous rearrangements not resulting in any change of service rendered by means of the facilities involved, all as more fully set forth in the application in this proceeding.

For proposed sales to existing distributor customers, Applicant states that the maximum number of new delivery points, consisting of line taps and metering and regulating stations, will not exceed ten and that the maximum number of lateral and loop pipelines will not exceed ten. For proposed sales to direct customers, the maximum number of new line taps and metering and regulating stations will not exceed ten and the maximum number of lateral and loop pipelines will not exceed ten. For miscellaneous rearrangements, Applicant will construct a maximum number of pipelines, including lateral and loop lines, not exceeding twenty.

The total cost of facilities proposed under this application will not exceed a maximum of $300,000 and the total deliveries to any one customer will not exceed a maximum of 100,000 Mcf of natural gas per year. Further, none of the gas delivered pursuant to this order will be used by any customer for boiler fuel purposes, as defined by subparagraph (9) of Section 157.7(c) of the Commission's Regulations.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on December 22, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Southern Natural Gas Company, a Delaware corporation having its principal place of business in Birmingham, Alabama, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of October 6, 1942, in Docket No. G-296 (3 FPC 822).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation and/or sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(6) The authorization hereinafter granted should be limited to construction during the 12 months' period commencing on the day this order issues and the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $300,000, with the total deliveries to any one customer not to exceed a maximum of 100,000 Mcf of natural gas per year.

(7) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit within 60 days after the expiration of the authorization granted hereinafter, a statement in compliance with Section 157.7(c)(8) of the Commission's Regulations under the Natural Gas Act.

(8) The certificate issued hereinafter should be conditioned upon Applicant's compliance with the provisions of Section 157.7(c)(7) of the aforesaid Regulations.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity is issued authorizing Applicant, Southern Natural Gas Company, to construct during the 12 months' period commencing on the day this order issues the proposed facilities hereinbefore described, as more fully described in the application in this proceeding, and to operate such facilities for the sale of natural gas and for miscellaneous rearrangements as hereinafter provided.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(C) The authorization granted in paragraph (A) above is limited to construction during the 12 months' period commencing on the day this order issues and the total expenditures for facilities to be constructed thereunder are limited to a maximum of $300,000, with the total deliveries to any one customer limited to a maximum of 100,000 Mcf of natural gas per year.

(D) Applicant shall submit within 60 days after the expiration of the authorization granted by paragraph (A) above a statement in compliance with Section 157.7(c)(8) of the Commission's Regulations under the Natural Gas Act.

(E) The certificate issued by paragraph (A) above is expressly conditioned upon Applicant's compliance with the provisions of Section 157.7(c)(7) of the aforesaid Regulations and, further, the certificate granted upon the express condition that any interruptible service resulting herefrom shall be curtailed or interrupted to the extent required to meet existing or future contracted maximum delivery obligations of Applicant for firm service to its customers.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr. and Charles R. Ross.

T. L. JAMES & COMPANY, INC., ET AL., DOCKET NO. G-16492, ET AL.[1]

ORDER APPROVING OFFERS OF SETTLEMENT, SEVERING PROCEEDINGS, TERMINATING CERTAIN PROCEEDINGS IN WHOLE AND OTHERS IN PART, AND PRESCRIBING REFUNDS

(Issued December 30, 1965)

Respondents, as set forth in the appendix, have severally filed offers of settlement to resolve conflicting interpretations of the tax reimbursement provisions in their rate schedules covering jurisdictional sales of natural gas in Louisiana. All of the respondents' sales herein are made to Texas Gas Transmission Corporation (Texas Gas), except for sales by Pan American Petroleum Corporation (Pan American) which are made to Trunkline Gas Company (Trunkline). In summary the settlement proposals filed by respondents provide:

(1) A settlement rate of 1.75 cents per Mcf, in lieu of 1.875 cents per Mcf, as the applicable Louisiana gas severance tax reimbursement for respondents' sales to Texas Gas.

(2) A settlement rate of 1.80 cents per Mcf, in lieu of 2.05 cents per Mcf, as the applicable Louisiana gas severance tax reimbursement for Pan American's sales to Trunkline.

(3) Respondents selling to Texas Gas, in effect, propose to refund, with applicable interest, one-half of the amount collected in excess of the proposed settlement rate of 1.75 cents per Mcf in the above-entitled proceedings for the period prior to September 1, 1965, and all amounts collected in excess of 1.75 cents per Mcf thereafter.

(4) Pan American proposes, under its FPC Gas Rate Schedule No. 258 for the period prior to April 1, 1964,[2] to refund to Trunkline $8,992.31 with interest at 6 percent per annum, which amount represents slightly more than one-half of the $14,987.18 collected subject to refund.

(5) Pan American proposes, under its FPC Gas Rate Schedule Nos. 259 and 260, to refund to Trunkline, with interest at 6 percent per annum, 0.15 cents per Mcf tax reimbursement for all gas delivered under said rate schedules,[3] which is also slightly more than one-half of the amount in dispute.

Texas Gas has concurred in each of the settlement proposals involving it and Trunkline has concurred in Pan American's settlements proposal. No objections to any of the proposed settlements have been received from interveners or other interested parties.

We believe the proposals are consistent with the public interest and the provisions of the Natural Gas Act, and consequently shall approve the same.

Our action herein should not be construed as constituting approval of any future rate increases, if any, that may be filed under the subject rate sched-

[1] The docketed matters proposed for settlement herein are set forth in the appendix.

[2] Tax reimbursement applicable to gas delivered from and after April 1, 1964, under Pan American's FPC Gas Rate Schedule No. 258 is being paid at the rate prescribed in the settlement approved by Commission order issued March 20, 1964, 31 FPC 616.

[3] Pan American further agrees to pay Trunkline, as soon as such amount can be determined, an additional amount equal to the difference between tax reimbursement at 1.80 cents per Mcf on gas delivered after approval of this settlement proposal and such lower tax reimbursement, if any, as is provided by any general rate settlement into which Pan American enters or as is allowed by the Commission's final order in Southern Louisiana Area Rate Proceedings, Docket No. AR61-2, *et al.*, whichever shall first occur.

ules, and is without prejudice to any findings or order of the Commission in future proceedings, including area rate or similar proceedings, involving Respondents' rates and rate schedules, their successors or assignees.

The Commission finds:

The proposed settlements of the subject proceedings on the bases described herein, as more fully set forth in the settlement proposals filed by Respondents as set forth in the appendix, are in the public interest and it is appropriate in carrying out the provisions of the Natural Gas Act that they be approved and made effective as hereinafter ordered, and good cause exists for approving these settlements, for severing proceedings, for terminating certain proceedings in whole and others in part, and for providing for refunds.

The Commission orders:

(A) The several offers of settlement filed with the Commission by Respondents as set forth in the appendix are approved in accordance with provisions of this order.

(B) Respondents shall file, within 90 days from the date of issuance of this order, notices of change in rates under their FPC Gas Rate Schedules to reflect the settlement rates applicable to severance tax reimbursement. The notices of change shall be submitted in accordance with Part 154 of the Commission's Regulations under the Natural Gas Act.

(C) Respondents shall compute the difference between the rates collected subject to refund in the above-entitled proceedings and the settlement rates for the periods set forth in the appendix, with applicable interest to the date of this order, and shall within 45 days from the date of issuance of this order submit a report to the Commission, with a copy to its jurisdictional pipeline purchasers, setting out the amount of refunds (showing separately the principal and applicable interest) the basis used for such determination, the period covered, and ten days thereafter shall submit to the Commission a copy of a letter from its jurisdictional pipeline purchasers agreeing to the correctness of such amounts.

(D) Respondents shall retain these amounts of monies shown in the report required under Ordering Paragraph (C) above, subject to further order of the Commission.

(E) Respondents may deposit the retained refunds in a special escrow account, and shall tender for filing within 60 days of the date of issuance of this order an executed Escrow Agreement, conditioned as set out below, accompanied by a certificate showing service of a copy thereof upon its jurisdictional pipeline customers. Unless notified to the contrary by the Secretary within 30 days from the date of filing thereof, the Escrow Agreement shall be deemed to be satisfactory and to have been accepted for filing. The Escrow Agreement shall be entered into between Respondents and any bank or trust company used as a depositor for funds of the United States Government and the agreement shall be conditioned as follows:

(1) Respondents, the bank or trust company, and the successors and assigns of each, shall be held and formally bound unto the Federal Power Commission for the use and benefit of those entitled thereto, with respect to all amounts and the interest thereon deposited in the special escrow account, subject to such agreement, and such bank or trust company shall be bound to pay over to such person or persons as may be identified and designated by final order of the Commission and in such manner as may be therein specified, all or any portion of such deposits and the interest thereon.

(2) The bank or trust company may invest and reinvest such deposits in any short-term indebtedness of the United States or any agency thereof or in any form of obligation guaranteed by the United States which is, respectively, payable within 120 days as the said bank or trust company in the exercise of its sound discretion may select.

(3) Such bank or trust company shall be liable for such interest as the invested funds described in Paragraph (2) above will earn and no other interest may be collected from it.

(4) Such bank or trust company shall be entitled to such compensation as is fair, reasonable and customary for its services as such, which compensation shall be paid out of the escrow account to such bank or trust company. Said bank or trust company will likewise be entitled to reimbursement for its reasonable expenses necessarily incurred in the administration of this escrow account, which reimbursement shall be made out of the escrow account.

(5) Such bank or trust company shall report to the Secretary quarterly, certifying the amount deposited in the bank or trust company for the quarterly period.

(F) If Respondent elects to commingle the retained refunds with its general assets and use them for business purposes, it shall notify the Secretary of the Commission of its intention to do so within sixty days of the issuance of this order, and shall pay interest on such monies at the rate of 4.5% per annum from the date of issuance of this order to the date on which they are paid over to the person or persons ultimately determined to be entitled thereto by final order or orders of the Commission.

(G) Upon notification by the Secretary of the Commission that each of Respondents has complied with the terms and conditions of this order, the Section 4(e) proceedings in the appendix hereto shall terminate in whole and in part as designated, and the proceedings in the appendix hereto shall be severed from consolidated proceedings in Docket No. G–16492, *et al.*

(H) The Secretary of the Commission shall, by separate letter, direct the pipeline purchasers to report its plans for distribution of the refunds provided for herein. In the event that the pipeline purchaser states that it will flow-through the entire amount of refunds received, the Secretary of the Commission is authorized to release by his letter the escrowed refunds.

(I) The acceptance by the Commission of Respondents offers of settlement is without prejudice to any findings or determinations that may be made in any proceeding now pending, or hereafter instituted by or against Respondents and is without prejudice to claims or contentions which may be made by Respondents, the Commission staff, or any affected party hereto, in any proceeding.

APPENDIX

Docket Nos.	Respondent	Offer to settlement filed	Rate schedule No.	Refund period with applied interest, from [1]	Proceedings severed and terminated	Proceedings severed and terminated in part [5]	Settlement tax reimbursement figure per Mcf [2]

G–20288	Pan American Petroleum Corporation	11/15/65	258	Refund [4]	G–20288	N.A.	1.80 cents.
			259	Refund [5]	G–20288	N.A.	1.80 cents.
			260	Refund [5]	G–20288	N.A.	1.89 cents.

[1] The period of refund is from the date indicated to the date of issuance of this order unless otherwise indicated.

[2] The proceedings that are terminated in part involve matters in addition to the tax reimbursement conflicts and said proceedings are terminated only insofar as the Louisiana gas severance tax reimbursement issue is involved.

[3] The refund period ends on March 1, 1963 as the tax reimbursement figure was reduced to 1.75 cents per Mcf on that date.

[4] Pan American shall refund $8,992.31 with interest at 6 percent per annum to Trunkline.

[5] Pan American shall refund 0.15 cent for Mcf for all gas delivered under its FPC Gas Rate Schedule Nos. 259 and 260 for which Pan American has been paid by Trunkline tax reimbursement at the rate of 2.05 cents per Mcf, plus interest at 6 percent per annum, from date of deliveries to the date of issuance of this order.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr. and Charles R. Ross.

WARREN PETROLEUM CORPORATION (OPERATOR), ET AL., G–20478, ET AL.; LONE STAR GAS COMPANY, RP60–4; CITIES SERVICE GAS COMPANY, RP65–21; NATURAL GAS PIPELINE COMPANY OF AMERICA, RP65–25

ORDER REQUIRING REPORT OF INTENDED DISPOSITION OF REFUNDS AND RELEASING REFUNDS IN PART

(Issued December 30, 1965)

The Commission, by order issued June 3, 1965, 33 FPC 1212, as amended by order of August 25, 1965, 34 FPC 587, in Docket No. G–20478, *et al.*, conditionally approved a rate settlement proposal filed by Warren Petroleum Corporation, Kerr-McGee Oil Industries, Inc., Texaco Inc., and Cities Service Oil Company (WKTC). That order, among other things, required WKTC to retain the amount of refunds, with interest, ordered therein until further Commission order directing its disposition. The purpose of that action was to assure that within the limits of our jurisdictional reach the amounts to be refunded would actually flow to those parties legally and equitably entitled thereto. That purpose, and the procedures to be followed to effectuate it, was set forth in our order issued July 8, 1964, in *Humble Oil & Refining Company*, Docket No. G–9287, *et al.*, 32 FPC 49.

It appears from the terms of the settlement between the parties and the reports filed by WKTC that certain amounts are refundable to Lone Star Gas Company (Lone Star) and Cities Service Gas Company (Gas Company). On December 15, 1965, Lone Star filed a report in Docket No. G–20478, *et al.*, stating that it has only one jurisdictional customer, *i.e.*, Natural Gas Pipeline Company of America (Natural), and that it will refund a proportionate share to Natural of the refunds, including interest, to be received pursuant to the settlement in that proceeding. However, a review of Lone Star's report reflects that Lone Star does not intend to flow-through the refunds received by it for the rates above the 16.8¢ per Mcf level set forth in its settlement agreement in Docket No. RP60–4, which was approved by the Commission on December 1, 1961, 26 FPC 790. For the reasons stated in our *Humble* order, *supra*, we shall require WKTC to retain the amounts collected in excess of the 16.8¢ rate pending further order and to release those amounts that Lone Star agrees to flow-through to Natural.

A review of Natural's flow-through obligations indicates that Natural is obligated to flow-through to its customers the jurisdictional portion of the refunds to be received by it from Lone Star. Natural, however, may disagree with our conclusions regarding its flow-through obligations. In that event we shall provide that the amounts received by it from Lone Star shall be held by Natural subject to our further order.

In furtherance of our stated policy and the procedure set forth in the *Humble* order, *supra*, we shall require Gas Company to file a report setting out its intended disposition of the amounts refundable to it under the settlement in Docket No. G–20478, *et al.*

The Commission orders:

(A) Gas Company shall submit, in Docket No. RP65–21, within ten days of the issuance of this order, a report of its intended disposition of the amounts refundable to it under the settlement in Docket No. G–20478, *et al.*,

and shall serve such report upon its customers and interested state commissions.

(B) In the event that Gas Company claims the right to retain any portion of the amount refundable to it from WKTC, it shall submit, in addition to the report, a detailed statement of the legal and equitable basis for such claim.

(C) WKTC is directed to release and pay over to Lone Star the amounts refundable to that company under Docket Nos. G–20478, G–20479, and G–20451 and to retain the amounts refundable to Lone Star under Docket Nos. RI63–486, RI63–460, and RI64–69.

(D) Lone Star is directed to flow-through to Natural the proportionate share of the amounts received pursuant to Paragraph (C) in accordance with its report filed herein on December 15, 1965.

(E) If Natural claims the right to retain any of the amounts received pursuant to Paragraph (D), Natural shall report to the Commission within ten days of the date of this order the legal and equitable basis of such claim and shall retain the total amounts received from Lone Star subject to our further order and in accordance with any of the methods set forth in Paragraph (J) of our order issued April 21, 1965, in *Humble Oil & Refining Company, et al.*, Docket No. G–9287, *et al.*, 33 FPC 830.

(F) Pending further order of the Commission, WKTC shall retain all amounts not hereby released in accordance with our order of June 3, 1965, as modified by our order of August 25, 1965, in Docket No. G–20478, *et al.*
